# Get the Most Out of MyLab Math

MyLab™ Math, Pearson's online homework, tutorial, and assessment program, creates personalized experiences for students and provides powerful tools for instructors. With a wealth of tested and proven resources, each course can be tailored to fit your specific needs.

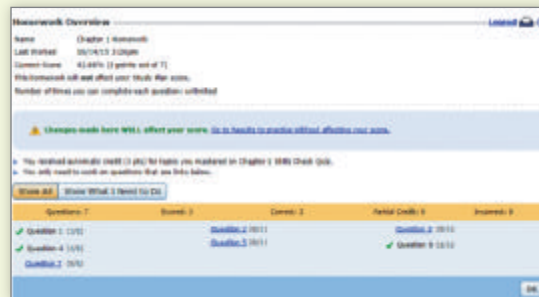

## Learning In Any Environment

- With an updated and streamlined design, students and instructors can access MyLab Math from most **mobile devices**.
- Because classroom formats and student needs continually change and evolve, MyLab Math has built-in flexibility to accommodate various course designs and formats.

## Personalized Learning

Not every student learns the same way or at the same rate. Thanks to our advances in adaptive learning technology capabilities, you no longer have to teach as if they do.

- MyLab Math's **adaptive Study Plan** acts as a personal tutor, updating in real-time based on student performance throughout the course to provide personalized recommendations for practice. You can now assign the Study Plan as a prerequisite to a test or a quiz with **Companion Study Plan Assignments**.
- MyLab Math can **personalize homework assignments** for students based on their performance on a test or quiz. This way, students can focus on just the topics they have not yet mastered.
- New - **Skill Builder** exercises offer just-in-time adaptive practice from within homework assignments to help students build the skills needed to successfully complete their work.

Visit [pearson.com/mylab/math](https://pearson.com/mylab/math) and click **Get Trained** to make sure you're getting the most out of MyLab Math.

MyLab

# MyLab Math Online Course for Precalculus: Concepts Through Functions, A Right Triangle Approach to Trigonometry by Sullivan and Sullivan

(access code required)

## Achieve Your Potential

Success in math can make a difference in life. MyLab Math is a learning program with resources to help you achieve your potential in this course and beyond. MyLab Math helps you get up to speed on course material and understand how math will play a role in your future career.

## Preparedness

One of the biggest challenges in College Algebra, Trigonometry, and Precalculus is being adequately prepared for the course with prerequisite knowledge. MyLab Math's learning resources help you refresh your knowledge of topics you previously learned. Brushing up on these essential algebra skills at the start of a course can dramatically help increase success.

Due	Assignment
	<a href="#">Getting Ready for Chapter 1 Quiz</a>
	<a href="#">Getting Ready for Chapter 1 Homework</a>
	<a href="#">Getting Ready for Chapter 2 Quiz</a>
	<a href="#">Getting Ready for Chapter 2 Homework</a>
	<a href="#">Getting Ready for Chapter 3 Quiz</a>
	<a href="#">Getting Ready for Chapter 3 Homework</a>
	<a href="#">Getting Ready for Chapter 4 Quiz</a>
	<a href="#">Getting Ready for Chapter 4 Homework</a>

## Getting Ready

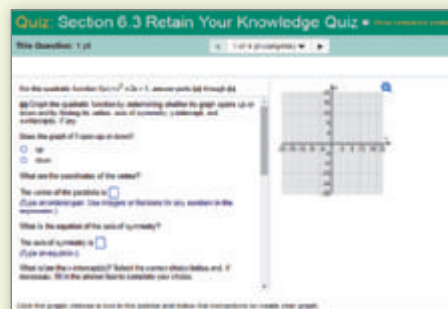

MyLab Math allows you to refresh your understanding of prerequisite topics through skill review quizzes and personalized homework. With Getting Ready content in MyLab Math, you'll get just the help you need to be prepared to learn the new material.

## Maintaining Skills

The Sullivans are committed to students, helping them retain essential information and maintain skills needed for success in current and future math courses.

## Retain Your Knowledge Exercises

**Updated!** Retain Your Knowledge Exercises support ongoing review at the course level and help students maintain essential skills. These are excellent cumulative review problems and are perfect for studying for final exams. Retain Your Knowledge Exercises are assignable in MyLab Math and available within each chapter.

## Guided Lecture Notes

Get help focusing on important concepts with the use of this structured organized note-taking tool. The Guided Lecture Notes ask students to complete definitions, procedures, and examples based on the content of the Author-in-Action videos and textbook. By directing students into essential material, students can focus and retain the most important concepts.

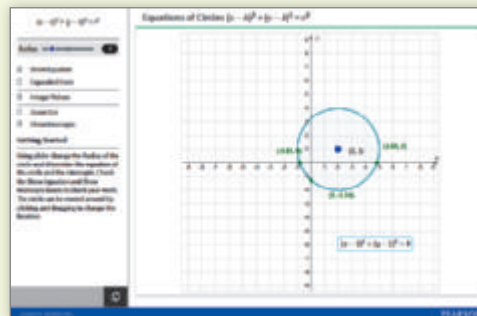

# Connect the Concepts and Relate the Math

## Visualization and Conceptual Understanding

These MyLab Math resources will help students connect the concepts and think visually.

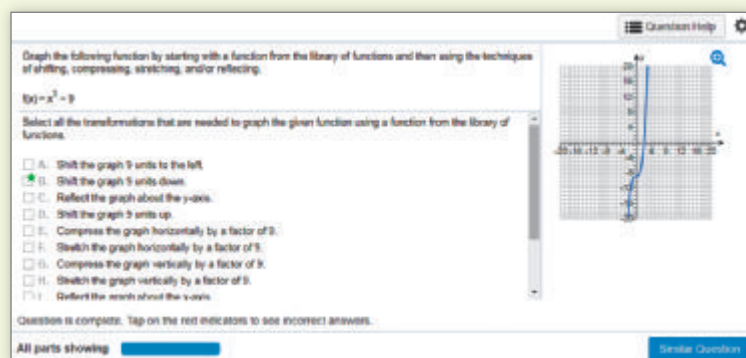

### Guided Visualizations

Engaging interactive figures bring mathematical concepts to life, helping you visualize the concepts through directed explorations and purposeful manipulation. Guided Visualizations, assignable in MyLab Math, encourage active learning, critical thinking, and conceptual understanding.

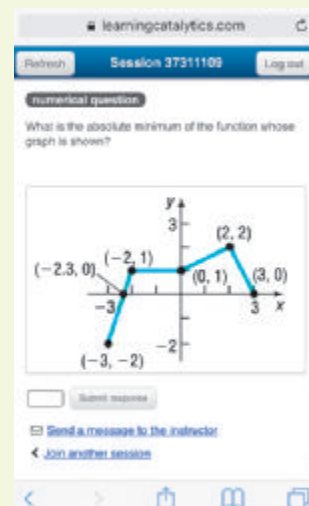

### Setup & Solve Exercises

Stepped-out exercises ask students to first describe how they will set up and approach the problem. This reinforces conceptual understanding of the process applied in solving the problem and promotes long term retention of the skill. Access to the eText is available for additional support.

### Learning Catalytics

Learning Catalytics helps you generate class discussion, customize your lecture, and promote peer-to-peer learning with real-time analytics. As a student response tool, Learning Catalytics uses students' smartphones, tablets, or laptops to engage them in more interactive tasks and thinking. Michael Sullivan III uses Learning Catalytics in his own classroom and has created a library of questions for instructors to use in their classes.

# Prepare for Class “Read the Book”

Feature	Description	Benefit	Page
<b>Every Chapter Opener begins with...</b>			
Chapter Opening Article & Project	Each chapter begins with a current article and ends with a related project. The article describes a real situation.	The Article describes a real situation. The Project lets you apply what you learned to solve a related problem.	280, 385
 Internet Based Projects	The projects allow for the integration of spreadsheet technology that students will need to be a productive member of the workforce.	The projects allow the opportunity for students to collaborate and use mathematics to deal with issues that come up in their lives.	280, 385
<b>Every Section begins with...</b>			
<b>Learning Objectives</b> 	Each section begins with a list of objectives. Objectives also appear in the text where the objective is covered.	These focus your studying by emphasizing what’s most important and where to find it.	302
<b>Sections contain...</b>			
Preparing for this Section	Most sections begin with a list of key concepts to review with page numbers.	Ever forget what you’ve learned? This feature highlights previously learned material to be used in this section. Review it, and you’ll always be prepared to move forward.	302
<b>Now Work the ‘Are You Prepared?’ Problems</b>	Problems that assess whether you have the prerequisite knowledge for the upcoming section.	Not sure you need the Preparing for This Section review? Work the ‘Are You Prepared?’ problems. If you get one wrong, you’ll know exactly what you need to review and where to review it!	302, 313
 <b>Now Work PROBLEMS</b>	These follow most examples and direct you to a related exercise.	We learn best by doing. You’ll solidify your understanding of examples if you try a similar problem right away, to be sure you understand what you’ve just read.	309, 314
<b>WARNING</b>	Warnings are provided in the text.	These point out common mistakes and help you to avoid them.	335
<b>Exploration and Seeing the Concept</b>	These represent graphing utility activities to foreshadow a concept or solidify a concept just presented.	You will obtain a deeper and more intuitive understanding of theorems and definitions.	206, 322
 <b>In Words</b>	These provide alternative descriptions of select definitions and theorems.	Does math ever look foreign to you? This feature translates math into plain English.	319
 <b>CALCULUS</b>	These appear next to information essential for the study of calculus.	Pay attention—if you spend extra time now, you’ll do better later!	74, 309
<b>SHOWCASE EXAMPLES</b>	These examples provide “how-to” instruction by offering a guided, step-by-step approach to solving a problem.	With each step presented on the left and the mathematics displayed on the right, students can immediately see how each step is employed.	210–211
 <b>Model It! Examples and Problems</b>	These are examples and problems that require you to build a mathematical model from either a verbal description or data. The homework Model It! problems are marked by purple headings.	It is rare for a problem to come in the form, “Solve the following equation”. Rather, the equation must be developed based on an explanation of the problem. These problems require you to develop models that will allow you to describe the problem mathematically and suggest a solution to the problem.	325, 356

# Practice “Work the Problems”

Feature	Description	Benefit	Page
<b>‘Are You Prepared?’ Problems</b>	These assess your retention of the prerequisite material you’ll need. Answers are given at the end of the section exercises. This feature is related to the Preparing for This Section feature.	Do you always remember what you’ve learned? Working these problems is the best way to find out. If you get one wrong, you’ll know exactly what you need to review and where to review it!	302, 313
<b>Concepts and Vocabulary</b>	These short-answer questions, mainly Fill-in-the-Blank and True/False items, assess your understanding of key definitions and concepts in the current section.	It is difficult to learn math without knowing the language of mathematics. These problems test your understanding of the formulas and vocabulary.	313
<b>Skill Building</b>	Correlated to section examples, these problems provide straightforward practice.	It’s important to dig in and develop your skills. These problems provide you with ample practice to do so.	313–315
<b>Mixed Practice</b>	These problems offer comprehensive assessment of the skills learned in the section by asking problems that relate to more than one concept or objective. These problems may also require you to utilize skills learned in previous sections.	Learning mathematics is a building process. Many concepts are interrelated. These problems help you see how mathematics builds on itself and also see how the concepts tie together.	315
<b>Applications and Extensions</b>	These problems allow you to apply your skills to real-world problems. They also allow you to extend concepts learned in the section.	You will see that the material learned within the section has many uses in everyday life.	315–318
<b>Explaining Concepts: Discussion and Writing</b>	“Discussion and Writing” problems are colored red. These support class discussion, verbalization of mathematical ideas, and writing and research projects.	To verbalize an idea, or to describe it clearly in writing, shows real understanding. These problems nurture that understanding. Many are challenging but you’ll get out what you put in.	318
<b>Retain Your Knowledge</b>	These problems allow you to practice content learned earlier in the course.	The ability to remember how to solve all the different problems learned throughout the course is difficult. These help you remember.	318
<b>Now Work PROBLEMS</b>	Many examples refer you to a related homework problem. These related problems are marked by a pencil and orange numbers.	If you get stuck while working problems, look for the closest Now Work problem and refer back to the related example to see if it helps.	311, 314
<b>Chapter Review Problems</b>	Every chapter concludes with a comprehensive list of exercises to practice. Use the list of objectives to determine the objective and examples that correspond to the problems.	Work these problems to verify you understand all the skills and concepts of the chapter. Think of it as a comprehensive review of the chapter.	380–383

# Review “Study for Quizzes and Tests”

Feature	Description	Benefit	Page
<b>Chapter Review at the end of each chapter contains...</b>			
<b>Things to Know</b>	A detailed list of important theorems, formulas, and definitions from the chapter.	Review these and you’ll know the most important material in the chapter!	378–379
<b>You Should Be able to...</b>	Contains a complete list of objectives by section, examples that illustrate the objective, and practice exercises that test your understanding of the objective.	Do the recommended exercises and you’ll have mastery over the key material. If you get something wrong, review the suggested page numbers and try again.	379–380
<b>Review Exercises</b>	These provide comprehensive review and practice of key skills, matched to the Learning Objectives for each section.	Practice makes perfect. These problems combine exercises from all sections, giving you a comprehensive review in one place.	380–383
<b>Chapter Test</b>	About 15–20 problems that can be taken as a Chapter Test. Be sure to take the Chapter Test under test conditions—no notes!	Be prepared. Take the sample practice test under test conditions. This will get you ready for your instructor’s test. If you get a problem wrong, you can watch the Chapter Test Prep Video.	383
<b>Cumulative Review</b>	These problem sets appear at the end of each chapter, beginning with Chapter 2. They combine problems from previous chapters, providing an ongoing cumulative review.	These are really important. They will ensure that you are not forgetting anything as you go. These will go a long way toward keeping you primed for the final exam.	384
<b>Chapter Project</b>	The Chapter Project applies to what you’ve learned in the chapter. Additional projects are available on the Instructor’s Resource Center (IRC).	The Project gives you an opportunity to apply what you’ve learned in the chapter to the opening article. If your instructor allows, these make excellent opportunities to work in a group, which is often the best way of learning math.	385
 <b>Internet Based Projects</b>	In selected chapters, a web-based project is given.	The projects allow the opportunity for students to collaborate and use mathematics to deal with issues that come up in their lives.	385

# Contents

<b>To the Student</b>	<b>xix</b>
<b>Three Distinct Series</b>	<b>xx</b>
<b>The Concepts through Functions Series</b>	<b>xxi</b>
<b>Preface to the Instructor</b>	<b>xxii</b>
<b>Resources for Success</b>	<b>xxviii</b>
<b>Applications Index</b>	<b>xxx</b>

## **F Foundations: A Prelude to Functions 1**

<b>F.1 The Distance and Midpoint Formulas</b>	<b>2</b>
Use the Distance Formula • Use the Midpoint Formula	
<b>F.2 Graphs of Equations in Two Variables; Intercepts; Symmetry</b>	<b>9</b>
Graph Equations by Plotting Points • Find Intercepts from a Graph • Find Intercepts from an Equation • Test an Equation for Symmetry • Know How to Graph Key Equations	
<b>F.3 Lines</b>	<b>19</b>
Calculate and Interpret the Slope of a Line • Graph Lines Given a Point and the Slope • Find the Equation of a Vertical Line • Use the Point-Slope Form of a Line; Identify Horizontal Lines • Write the Equation of a Line in Slope-Intercept Form • Identify the Slope and y-Intercept of a Line from Its Equation • Find the Equation of a Line Given Two Points • Graph Lines Written in General Form Using Intercepts • Find Equations of Parallel Lines • Find Equations of Perpendicular Lines	
<b>F.4 Circles</b>	<b>34</b>
Write the Standard Form of the Equation of a Circle • Graph a Circle • Work with the General Form of the Equation of a Circle	
<b>Chapter Project</b>	<b>42</b>

## **1 Functions and Their Graphs 43**

<b>1.1 Functions</b>	<b>44</b>
Determine Whether a Relation Represents a Function • Find the Value of a Function • Find the Difference Quotient of a Function • Find the Domain of a Function Defined by an Equation • Form the Sum, Difference, Product, and Quotient of Two Functions	
<b>1.2 The Graph of a Function</b>	<b>59</b>
Identify the Graph of a Function • Obtain Information from or about the Graph of a Function	
<b>1.3 Properties of Functions</b>	<b>68</b>
Determine Even and Odd Functions from a Graph • Determine Even and Odd Functions from the Equation • Use a Graph to Determine Where a Function is Increasing, Decreasing, or Constant • Use a Graph to Locate Local Maxima and Local Minima • Use a Graph to Locate the Absolute Maximum and the Absolute Minimum • Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function is Increasing or Decreasing • Find the Average Rate of Change of a Function	

<b>1.4 Library of Functions; Piecewise-defined Functions</b>	<b>82</b>
Graph the Functions Listed in the Library of Functions • Graph Piecewise-defined Functions	
<b>1.5 Graphing Techniques: Transformations</b>	<b>93</b>
Graph Functions Using Vertical and Horizontal Shifts • Graph Functions Using Compressions and Stretches • Graph Functions Using Reflections about the $x$ -Axis and the $y$ -Axis	
<b>1.6 Mathematical Models: Building Functions</b>	<b>106</b>
Build and Analyze Functions	
<b>1.7 Building Mathematical Models Using Variation</b>	<b>111</b>
Construct a Model Using Direct Variation • Construct a Model Using Inverse Variation • Construct a Model Using Joint or Combined Variation	
<b>Chapter Review</b>	<b>117</b>
<b>Chapter Test</b>	<b>121</b>
<b>Chapter Projects</b>	<b>122</b>

## **2 Linear and Quadratic Functions 124**

<b>2.1 Properties of Linear Functions and Linear Models</b>	<b>125</b>
Graph Linear Functions • Use Average Rate of Change to Identify Linear Functions • Determine Whether a Linear Function Is Increasing, Decreasing, or Constant • Find the Zero of a Linear Function • Build Linear Models from Verbal Descriptions	
<b>2.2 Building Linear Models from Data</b>	<b>136</b>
Draw and Interpret Scatter Diagrams • Distinguish between Linear and Nonlinear Relations • Use a Graphing Utility to Find the Line of Best Fit	
<b>2.3 Quadratic Functions and Their Zeros</b>	<b>144</b>
Find the Zeros of a Quadratic Function by Factoring • Find the Zeros of a Quadratic Function Using the Square Root Method • Find the Zeros of a Quadratic Function by Completing the Square • Find the Zeros of a Quadratic Function Using the Quadratic Formula • Find the Point of Intersection of Two Functions • Solve Equations That Are Quadratic in Form	
<b>2.4 Properties of Quadratic Functions</b>	<b>155</b>
Graph a Quadratic Function Using Transformations • Identify the Vertex and Axis of Symmetry of a Quadratic Function • Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts • Find a Quadratic Function Given Its Vertex and One Other Point • Find the Maximum or Minimum Value of a Quadratic Function	
<b>2.5 Inequalities Involving Quadratic Functions</b>	<b>167</b>
Solve Inequalities Involving a Quadratic Function	
<b>2.6 Building Quadratic Models from Verbal Descriptions and from Data</b>	<b>171</b>
Build Quadratic Models from Verbal Descriptions • Build Quadratic Models from Data	
<b>2.7 Complex Zeros of a Quadratic Function</b>	<b>181</b>
Find the Complex Zeros of a Quadratic Function	
<b>2.8 Equations and Inequalities Involving the Absolute Value Function</b>	<b>185</b>
Solve Absolute Value Equations • Solve Absolute Value Inequalities	
<b>Chapter Review</b>	<b>190</b>
<b>Chapter Test</b>	<b>193</b>

	<b>Cumulative Review</b>	<b>194</b>
	<b>Chapter Projects</b>	<b>195</b>
<b>3</b>	<b>Polynomial and Rational Functions</b>	<b>197</b>
<b>3.1</b>	<b>Polynomial Functions and Models</b>	<b>198</b>
	Identify Polynomial Functions and Their Degree • Graph Polynomial Functions Using Transformations • Identify the Real Zeros of a Polynomial Function and Their Multiplicity • Analyze the Graph of a Polynomial Function • Build Cubic Models from Data	
<b>3.2</b>	<b>The Real Zeros of a Polynomial Function</b>	<b>219</b>
	Use the Remainder and Factor Theorems • Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function • Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function • Find the Real Zeros of a Polynomial Function • Solve Polynomial Equations • Use the Theorem for Bounds on Zeros • Use the Intermediate Value Theorem	
<b>3.3</b>	<b>Complex Zeros; Fundamental Theorem of Algebra</b>	<b>234</b>
	Use the Conjugate Pairs Theorem • Find a Polynomial Function with Specified Zeros • Find the Complex Zeros of a Polynomial Function	
<b>3.4</b>	<b>Properties of Rational Functions</b>	<b>240</b>
	Find the Domain of a Rational Function • Find the Vertical Asymptotes of a Rational Function • Find the Horizontal or Oblique Asymptote of a Rational Function	
<b>3.5</b>	<b>The Graph of a Rational Function</b>	<b>251</b>
	Analyze the Graph of a Rational Function • Solve Applied Problems Involving Rational Functions	
<b>3.6</b>	<b>Polynomial and Rational Inequalities</b>	<b>266</b>
	Solve Polynomial Inequalities • Solve Rational Inequalities	
	<b>Chapter Review</b>	<b>273</b>
	<b>Chapter Test</b>	<b>277</b>
	<b>Cumulative Review</b>	<b>277</b>
	<b>Chapter Projects</b>	<b>278</b>
<b>4</b>	<b>Exponential and Logarithmic Functions</b>	<b>280</b>
<b>4.1</b>	<b>Composite Functions</b>	<b>281</b>
	Form a Composite Function • Find the Domain of a Composite Function	
<b>4.2</b>	<b>One-to-One Functions; Inverse Functions</b>	<b>289</b>
	Determine Whether a Function Is One-to-One • Determine the Inverse of a Function Defined by a Map or a Set of Ordered Pairs • Obtain the Graph of the Inverse Function from the Graph of the Function • Find the Inverse of a Function Defined by an Equation	
<b>4.3</b>	<b>Exponential Functions</b>	<b>302</b>
	Evaluate Exponential Functions • Graph Exponential Functions • Define the Number $e$ • Solve Exponential Equations	
<b>4.4</b>	<b>Logarithmic Functions</b>	<b>318</b>
	Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements • Evaluate Logarithmic Expressions • Determine the Domain of a Logarithmic Function • Graph Logarithmic Functions • Solve Logarithmic Equations	

<b>4.5 Properties of Logarithms</b>	<b>332</b>
Work with Properties of Logarithms • Write a Logarithmic Expression as a Sum or Difference of Logarithms • Write a Logarithmic Expression as a Single Logarithm • Evaluate a Logarithm Whose Base Is Neither 10 Nor $e$ • Graph a Logarithmic Function Whose Base Is Neither 10 Nor $e$	
<b>4.6 Logarithmic and Exponential Equations</b>	<b>341</b>
Solve Logarithmic Equations • Solve Exponential Equations • Solve Logarithmic and Exponential Equations Using a Graphing Utility	
<b>4.7 Financial Models</b>	<b>349</b>
Determine the Future Value of a Lump Sum of Money • Calculate Effective Rates of Return • Determine the Present Value of a Lump Sum of Money • Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money	
<b>4.8 Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models</b>	<b>359</b>
Find Equations of Populations That Obey the Law of Uninhibited Growth • Find Equations of Populations That Obey the Law of Decay • Use Newton's Law of Cooling • Use Logistic Models	
<b>4.9 Building Exponential, Logarithmic, and Logistic Models from Data</b>	<b>369</b>
Build an Exponential Model from Data • Build a Logarithmic Model from Data • Build a Logistic Model from Data	
<b>Chapter Review</b>	<b>378</b>
<b>Chapter Test</b>	<b>383</b>
<b>Cumulative Review</b>	<b>384</b>
<b>Chapter Projects</b>	<b>385</b>

## **5 Trigonometric Functions 386**

<b>5.1 Angles and Their Measure</b>	<b>387</b>
Convert between Decimal and Degree, Minute, Second Measures for Angles • Find the Length of an Arc of a Circle • Convert from Degrees to Radians and from Radians to Degrees • Find the Area of a Sector of a Circle • Find the Linear Speed of an Object Traveling in Circular Motion	
<b>5.2 Right Triangle Trigonometry</b>	<b>401</b>
Find the Values of Trigonometric Functions of Acute Angles • Use Fundamental Identities • Find the Values of the Remaining Trigonometric Functions, Given the Value of One of Them • Use the Complementary Angle Theorem	
<b>5.3 Computing the Values of Trigonometric Functions of Acute Angles</b>	<b>413</b>
Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{4} = 45^\circ$ • Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{6} = 30^\circ$ and $\frac{\pi}{3} = 60^\circ$ • Use a Calculator to Approximate the Values of the Trigonometric Functions of Acute Angles • Model and Solve Applied Problems Involving Right Triangles	
<b>5.4 Trigonometric Functions of any Angle</b>	<b>424</b>
Find the Exact Values of the Trigonometric Functions for Any Angle • Use Coterminal Angles to Find the Exact Value of a Trigonometric Function • Determine the Signs of the Trigonometric Functions of an Angle in a Given Quadrant • Find the Reference Angle of an Angle • Use a Reference Angle to Find the Exact Value of a Trigonometric Function • Find the Exact Values of Trigonometric Functions of an Angle, Given Information about the Function	
<b>5.5 Unit Circle Approach; Properties of the Trigonometric Functions</b>	<b>435</b>
Find the Exact Values of the Trigonometric Functions Using the Unit Circle • Know the Domain and Range of the Trigonometric Functions • Use Periodic Properties to Find the Exact Values of the Trigonometric Functions • Use Even-Odd Properties to Find the Exact Values of the Trigonometric Functions	

<b>5.6</b>	<b>Graphs of the Sine and Cosine Functions</b>	<b>447</b>
	Graph Functions of the Form $y = A \sin(\omega x)$ Using Transformations • Graph Functions of the Form $y = A \cos(\omega x)$ Using Transformations • Determine the Amplitude and Period of Sinusoidal Functions • Graph Sinusoidal Functions Using Key Points • Find an Equation for a Sinusoidal Graph	
<b>5.7</b>	<b>Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions</b>	<b>462</b>
	Graph Functions of the Form $y = A \tan(\omega x) + B$ and $y = A \cot(\omega x) + B$ • Graph Functions of the Form $y = A \csc(\omega x) + B$ and $y = A \sec(\omega x) + B$	
<b>5.8</b>	<b>Phase Shift; Sinusoidal Curve Fitting</b>	<b>470</b>
	Graph Sinusoidal Functions of the Form $y = A \sin(\omega x - \phi) + B$ • Build Sinusoidal Models from Data	
	<b>Chapter Review</b>	<b>482</b>
	<b>Chapter Test</b>	<b>487</b>
	<b>Cumulative Review</b>	<b>488</b>
	<b>Chapter Projects</b>	<b>489</b>

## **6** **Analytic Trigonometry** **491**

<b>6.1</b>	<b>The Inverse Sine, Cosine, and Tangent Functions</b>	<b>492</b>
	Find the Exact Value of an Inverse Sine Function • Find an Approximate Value of an Inverse Sine Function • Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions • Find the Inverse Function of a Trigonometric Function • Solve Equations Involving Inverse Trigonometric Functions	
<b>6.2</b>	<b>The Inverse Trigonometric Functions (Continued)</b>	<b>505</b>
	Find the Exact Value of Expressions Involving the Inverse Sine, Cosine, and Tangent Functions • Define the Inverse Secant, Cosecant, and Cotangent Functions • Use a Calculator to Evaluate $\sec^{-1} x$ , $\csc^{-1} x$ , and $\cot^{-1} x$ • Write a Trigonometric Expression as an Algebraic Expression	
<b>6.3</b>	<b>Trigonometric Equations</b>	<b>511</b>
	Solve Equations Involving a Single Trigonometric Function • Solve Trigonometric Equations Using a Calculator • Solve Trigonometric Equations Quadratic in Form • Solve Trigonometric Equations Using Fundamental Identities • Solve Trigonometric Equations Using a Graphing Utility	
<b>6.4</b>	<b>Trigonometric Identities</b>	<b>521</b>
	Use Algebra to Simplify Trigonometric Expressions • Establish Identities	
<b>6.5</b>	<b>Sum and Difference Formulas</b>	<b>529</b>
	Use Sum and Difference Formulas to Find Exact Values • Use Sum and Difference Formulas to Establish Identities • Use Sum and Difference Formulas Involving Inverse Trigonometric Functions • Solve Trigonometric Equations Linear in Sine and Cosine	
<b>6.6</b>	<b>Double-angle and Half-angle Formulas</b>	<b>542</b>
	Use Double-angle Formulas to Find Exact Values • Use Double-angle Formulas to Establish Identities • Use Half-angle Formulas to Find Exact Values	
<b>6.7</b>	<b>Product-to-Sum and Sum-to-Product Formulas</b>	<b>552</b>
	Express Products as Sums • Express Sums as Products	
	<b>Chapter Review</b>	<b>556</b>
	<b>Chapter Test</b>	<b>560</b>
	<b>Cumulative Review</b>	<b>560</b>
	<b>Chapter Projects</b>	<b>561</b>

<b>7</b>	<b>Applications of Trigonometric Functions</b>	<b>562</b>
<b>7.1</b>	<b>Applications Involving Right Triangles</b> Solve Right Triangles • Solve Applied Problems	<b>563</b>
<b>7.2</b>	<b>The Law of Sines</b> Solve SAA or ASA Triangles • Solve SSA Triangles • Solve Applied Problems	<b>569</b>
<b>7.3</b>	<b>The Law of Cosines</b> Solve SAS Triangles • Solve SSS Triangles • Solve Applied Problems	<b>579</b>
<b>7.4</b>	<b>Area of a Triangle</b> Find the Area of SAS Triangles • Find the Area of SSS Triangles	<b>586</b>
<b>7.5</b>	<b>Simple Harmonic Motion; Damped Motion; Combining Waves</b> Build a Model for an Object in Simple Harmonic Motion • Analyze Simple Harmonic Motion • Analyze an Object in Damped Motion • Graph the Sum of Two Functions	<b>593</b>
	<b>Chapter Review</b>	<b>602</b>
	<b>Chapter Test</b>	<b>604</b>
	<b>Cumulative Review</b>	<b>605</b>
	<b>Chapter Projects</b>	<b>605</b>
<b>8</b>	<b>Polar Coordinates; Vectors</b>	<b>607</b>
<b>8.1</b>	<b>Polar Coordinates</b> Plot Points Using Polar Coordinates • Convert from Polar Coordinates to Rectangular Coordinates • Convert from Rectangular Coordinates to Polar Coordinates • Transform Equations between Polar and Rectangular Forms	<b>608</b>
<b>8.2</b>	<b>Polar Equations and Graphs</b> Identify and Graph Polar Equations by Converting to Rectangular Equations • Test Polar Equations for Symmetry • Graph Polar Equations by Plotting Points	<b>617</b>
<b>8.3</b>	<b>The Complex Plane; De Moivre's Theorem</b> Plot Points in the Complex Plane • Convert a Complex Number between Rectangular Form and Polar Form • Find Products and Quotients of Complex Numbers in Polar Form • Use De Moivre's Theorem • Find Complex Roots	<b>632</b>
<b>8.4</b>	<b>Vectors</b> Graph Vectors • Find a Position Vector • Add and Subtract Vectors Algebraically • Find a Scalar Multiple and the Magnitude of a Vector • Find a Unit Vector • Find a Vector from Its Direction and Magnitude • Model with Vectors	<b>640</b>
<b>8.5</b>	<b>The Dot Product</b> Find the Dot Product of Two Vectors • Find the Angle between Two Vectors • Determine Whether Two Vectors Are Parallel • Determine Whether Two Vectors Are Orthogonal • Decompose a Vector into Two Orthogonal Vectors • Compute Work	<b>654</b>
<b>8.6</b>	<b>Vectors in Space</b> Find the Distance between Two Points in Space • Find Position Vectors in Space • Perform Operations on Vectors • Find the Dot Product • Find the Angle between Two Vectors • Find the Direction Angles of a Vector	<b>661</b>

<b>8.7 The Cross Product</b>	<b>671</b>
Find the Cross Product of Two Vectors • Know Algebraic Properties of the Cross Product • Know Geometric Properties of the Cross Product • Find a Vector Orthogonal to Two Given Vectors • Find the Area of a Parallelogram	
<b>Chapter Review</b>	<b>677</b>
<b>Chapter Test</b>	<b>680</b>
<b>Cumulative Review</b>	<b>681</b>

## **9 Analytic Geometry 682**

<b>9.1 Conics</b>	<b>683</b>
Know the Names of the Conics	
<b>9.2 The Parabola</b>	<b>684</b>
Analyze Parabolas with Vertex at the Origin • Analyze Parabolas with Vertex at $(h, k)$ • Solve Applied Problems Involving Parabolas	
<b>9.3 The Ellipse</b>	<b>693</b>
Analyze Ellipses with Center at the Origin • Analyze Ellipses with Center at $(h, k)$ • Solve Applied Problems Involving Ellipses	
<b>9.4 The Hyperbola</b>	<b>704</b>
Analyze Hyperbolas with Center at the Origin • Find the Asymptotes of a Hyperbola • Analyze Hyperbolas with Center at $(h, k)$ • Solve Applied Problems Involving Hyperbolas	
<b>9.5 Rotation of Axes; General Form of a Conic</b>	<b>716</b>
Identify a Conic • Use a Rotation of Axes to Transform Equations • Analyze an Equation Using Rotation of Axes • Identify Conics without a Rotation of Axes	
<b>9.6 Polar Equations of Conics</b>	<b>724</b>
Analyze and Graph Polar Equations of Conics • Convert the Polar Equation of a Conic to a Rectangular Equation	
<b>9.7 Plane Curves and Parametric Equations</b>	<b>730</b>
Graph Parametric Equations • Find a Rectangular Equation for a Curve Defined Parametrically • Use Time as a Parameter in Parametric Equations • Find Parametric Equations for Curves Defined by Rectangular Equations	
<b>Chapter Review</b>	<b>743</b>
<b>Chapter Test</b>	<b>745</b>
<b>Cumulative Review</b>	<b>746</b>
<b>Chapter Projects</b>	<b>747</b>

## **10 Systems of Equations and Inequalities 748**

<b>10.1 Systems of Linear Equations: Substitution and Elimination</b>	<b>749</b>
Solve Systems of Equations by Substitution • Solve Systems of Equations by Elimination • Identify Inconsistent Systems of Equations Containing Two Variables • Express the Solution of a System of Dependent Equations Containing Two Variables • Solve Systems of Three Equations Containing Three Variables • Identify Inconsistent Systems of Equations Containing Three Variables • Express the Solution of a System of Dependent Equations Containing Three Variables	
<b>10.2 Systems of Linear Equations: Matrices</b>	<b>764</b>
Write the Augmented Matrix of a System of Linear Equations • Write the System of Equations from the Augmented Matrix • Perform Row Operations on a Matrix • Solve a System of Linear Equations Using Matrices	

<b>10.3 Systems of Linear Equations: Determinants</b>	<b>779</b>
Evaluate 2 by 2 Determinants • Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables • Evaluate 3 by 3 Determinants • Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables • Know Properties of Determinants	
<b>10.4 Matrix Algebra</b>	<b>789</b>
Find the Sum and Difference of Two Matrices • Find Scalar Multiples of a Matrix • Find the Product of Two Matrices • Find the Inverse of a Matrix Solve a System of Linear Equations Using an Inverse Matrix	
<b>10.5 Partial Fraction Decomposition</b>	<b>806</b>
Decompose $P/Q$ , Where $Q$ Has Only Nonrepeated Linear Factors • Decompose $P/Q$ , Where $Q$ Has Repeated Linear Factors • Decompose $P/Q$ , Where $Q$ Has a Nonrepeated Irreducible Quadratic Factor • Decompose $P/Q$ , Where $Q$ Has a Repeated Irreducible Quadratic Factor	
<b>10.6 Systems of Nonlinear Equations</b>	<b>814</b>
Solve a System of Nonlinear Equations Using Substitution • Solve a System of Nonlinear Equations Using Elimination	
<b>10.7 Systems of Inequalities</b>	<b>823</b>
Graph an Inequality • Graph a System of Inequalities	
<b>10.8 Linear Programming</b>	<b>830</b>
Set up a Linear Programming Problem • Solve a Linear Programming Problem	
<b>Chapter Review</b>	<b>837</b>
<b>Chapter Test</b>	<b>841</b>
<b>Cumulative Review</b>	<b>842</b>
<b>Chapter Projects</b>	<b>842</b>
<b>11 Sequences; Induction; the Binomial Theorem</b>	<b>844</b>
<b>11.1 Sequences</b>	<b>845</b>
Write the First Several Terms of a Sequence • Write the Terms of a Sequence Defined by a Recursive Formula • Use Summation Notation • Find the Sum of a Sequence	
<b>11.2 Arithmetic Sequences</b>	<b>855</b>
Determine Whether a Sequence Is Arithmetic • Find a Formula for an Arithmetic Sequence • Find the Sum of an Arithmetic Sequence	
<b>11.3 Geometric Sequences; Geometric Series</b>	<b>861</b>
Determine Whether a Sequence Is Geometric • Find a Formula for a Geometric Sequence • Find the Sum of a Geometric Sequence • Determine Whether a Geometric Series Converges or Diverges • Solve Annuity Problems	
<b>11.4 Mathematical Induction</b>	<b>872</b>
Prove Statements Using Mathematical Induction	
<b>11.5 The Binomial Theorem</b>	<b>876</b>
Evaluate $\binom{n}{j}$ • Use the Binomial Theorem	
<b>Chapter Review</b>	<b>883</b>
<b>Chapter Test</b>	<b>885</b>
<b>Cumulative Review</b>	<b>885</b>
<b>Chapter Projects</b>	<b>886</b>

<b>12</b>	<b>Counting and Probability</b>	<b>887</b>
<b>12.1</b>	<b>Counting</b>	<b>888</b>
	Find All the Subsets of a Set • Count the Number of Elements in a Set • Solve Counting Problems Using the Multiplication Principle	
<b>12.2</b>	<b>Permutations and Combinations</b>	<b>893</b>
	Solve Counting Problems Using Permutations Involving $n$ Distinct Objects • Solve Counting Problems Using Combinations • Solve Counting Problems Using Permutations Involving $n$ Nondistinct Objects	
<b>12.3</b>	<b>Probability</b>	<b>902</b>
	Construct Probability Models • Compute Probabilities of Equally Likely Outcomes • Find Probabilities of the Union of Two Events • Use the Complement Rule to Find Probabilities	
	<b>Chapter Review</b>	<b>912</b>
	<b>Chapter Test</b>	<b>914</b>
	<b>Cumulative Review</b>	<b>914</b>
	<b>Chapter Projects</b>	<b>915</b>
<b>13</b>	<b>A Preview of Calculus: The Limit, Derivative, and Integral of a Function</b>	<b>916</b>
<b>13.1</b>	<b>Finding Limits Using Tables and Graphs</b>	<b>917</b>
	Find a Limit Using a Table • Find a Limit Using a Graph	
<b>13.2</b>	<b>Algebra Techniques for Finding Limits</b>	<b>922</b>
	Find the Limit of a Sum, a Difference, and a Product • Find the Limit of a Polynomial • Find the Limit of a Power or a Root • Find the Limit of a Quotient • Find the Limit of an Average Rate of Change	
<b>13.3</b>	<b>One-sided Limits; Continuous Functions</b>	<b>929</b>
	Find the One-sided Limits of a Function • Determine Whether a Function Is Continuous	
<b>13.4</b>	<b>The Tangent Problem; The Derivative</b>	<b>936</b>
	Find an Equation of the Tangent Line to the Graph of a Function • Find the Derivative of a Function • Find Instantaneous Rates of Change • Find the Instantaneous Velocity of a Particle	
<b>13.5</b>	<b>The Area Problem; The Integral</b>	<b>944</b>
	Approximate the Area Under the Graph of a Function • Approximate Integrals Using a Graphing Utility	
	<b>Chapter Review</b>	<b>951</b>
	<b>Chapter Test</b>	<b>953</b>
	<b>Chapter Projects</b>	<b>954</b>
<b>A</b>	<b>Review</b>	<b>A1</b>
<b>A.1</b>	<b>Algebra Essentials</b>	<b>A1</b>
	Work with Sets • Graph Inequalities • Find Distance on the Real Number Line • Evaluate Algebraic Expressions • Determine the Domain of a Variable • Use the Laws of Exponents • Evaluate Square Roots • Use a Calculator to Evaluate Exponents	
<b>A.2</b>	<b>Geometry Essentials</b>	<b>A14</b>
	Use the Pythagorean Theorem and Its Converse • Know Geometry Formulas • Understand Congruent Triangles and Similar Triangles	

<b>A.3 Polynomials</b>	<b>A23</b>
Recognize Monomials • Recognize Polynomials • Add and Subtract Polynomials • Multiply Polynomials • Know Formulas for Special Products • Divide Polynomials Using Long Division • Work with Polynomials in Two Variables	
<b>A.4 Factoring Polynomials</b>	<b>A33</b>
Factor the Difference of Two Squares and the Sum and Difference of Two Cubes • Factor Perfect Squares • Factor a Second-Degree Polynomial: $x^2 + Bx + C$ • Factor by Grouping • Factor a Second-Degree Polynomial: $Ax^2 + Bx + C, A \neq 1$ • Complete the Square	
<b>A.5 Synthetic Division</b>	<b>A43</b>
Divide Polynomials Using Synthetic Division	
<b>A.6 Rational Expressions</b>	<b>A47</b>
Reduce a Rational Expression to Lowest Terms • Multiply and Divide Rational Expressions • Add and Subtract Rational Expressions • Use the Least Common Multiple Method • Simplify Complex Rational Expressions	
<b>A.7 <math>n</math>th Roots; Rational Exponents</b>	<b>A57</b>
Work with $n$ th Roots • Simplify Radicals • Rationalize Denominators • Simplify Expressions with Rational Exponents	
<b>A.8 Solving Equations</b>	<b>A66</b>
Solve Linear Equations • Solve Rational Equations • Solve Equations by Factoring • Solve Radical Equations	
<b>A.9 Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications</b>	<b>A75</b>
Translate Verbal Descriptions into Mathematical Expressions • Solve Interest Problems • Solve Mixture Problems • Solve Uniform Motion Problems • Solve Constant Rate Job Problems	
<b>A.10 Interval Notation; Solving Inequalities</b>	<b>A84</b>
Use Interval Notation • Use Properties of Inequalities • Solve Inequalities • Solve Combined Inequalities	
<b>A.11 Complex Numbers</b>	<b>A92</b>
Add, Subtract, Multiply, and Divide Complex Numbers	

<b>B Graphing Utilities</b>	<b>B1</b>
<b>B.1 The Viewing Rectangle</b>	<b>B1</b>

# To the Student

---

As you begin, you may feel anxious about the number of theorems, definitions, procedures, and equations. You may wonder if you can learn it all in time. Don't worry, your concerns are normal. This textbook was written with you in mind. If you attend class, work hard, and read and study this book, you will build the knowledge and skills you need to be successful. Here's how you can use the book to your benefit.

## Read Carefully

When you get busy, it's easy to skip reading and go right to the problems. Don't . . . the book has a large number of examples and clear explanations to help you break down the mathematics into easy-to-understand steps. Reading will provide you with a clearer understanding, beyond simple memorization. Read before class (not after) so you can ask questions about anything you didn't understand. You'll be amazed at how much more you'll get out of class if you do this.

## Use the Features

We use many different methods in the classroom to communicate. Those methods, when incorporated into the book, are called "features." The features serve many purposes, from providing timely review of material you learned before (just when you need it), to providing organized review sessions to help you prepare for quizzes and tests. Take advantage of the features and you will master the material.

To make this easier, we've provided a brief guide to getting the most from this book. Refer to the "Prepare for Class," "Practice," and "Review" on pages i–iii. Spend fifteen minutes reviewing the guide and familiarizing yourself with the features by flipping to the page numbers provided. Then, as you read, use them. This is the best way to make the most of your textbook.

Please do not hesitate to contact us, through Pearson Education, with any questions, suggestions, or comments that would improve this text. We look forward to hearing from you, and good luck with all of your studies.

*Best Wishes!*

*Michael Sullivan*

*Michael Sullivan, III*

# Three Distinct Series

---

Students have different goals, learning styles, and levels of preparation. Instructors have different teaching philosophies, styles, and techniques. Rather than write one series to fit all, the Sullivans have written three distinct series. All share the same goal—to develop a high level of mathematical understanding and an appreciation for the way mathematics can describe the world around us. The manner of reaching that goal, however, differs from series to series.

## Concepts through Functions Series, Fourth Edition

This series differs from the others, utilizing a functions approach that serves as the organizing principle tying concepts together. Functions are introduced early in various formats. This approach supports the Rule of Four, which states that functions are represented symbolically, numerically, graphically, and verbally. Each chapter introduces a new type of function and then develops all concepts pertaining to that particular function. The solutions of equations and inequalities, instead of being developed as stand-alone topics, are developed in the context of the underlying functions. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra*; *Precalculus, with a Unit Circle Approach to Trigonometry*; *Precalculus, with a Right Triangle Approach to Trigonometry*.

## Contemporary Series, Tenth Edition

The Contemporary Series is the most traditional in approach yet modern in its treatment of precalculus mathematics. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor: *College Algebra*, *Algebra & Trigonometry*, *Trigonometry*, *Precalculus*.

## Enhanced with Graphing Utilities Series, Seventh Edition

This series provides a thorough integration of graphing utilities into topics, allowing students to explore mathematical concepts and foreshadow ideas usually studied in later courses. Using technology, the approach to solving certain problems differs from the Concepts or Contemporary Series, while the emphasis on understanding concepts and building strong skills does not: *College Algebra*, *Algebra & Trigonometry*, *Precalculus*.

# The Concepts through Functions Series

---

## College Algebra

This text provides an approach to college algebra that introduces functions early (Chapter 1). All material is presented through the eyes of a function. So, rather than have a chapter dedicated to review, the material is presented from a function point of view. For example, rather than reviewing the various approaches to solving quadratic equations, students are asked to find the zeros of a quadratic function or the  $x$ -intercepts of a quadratic function. This allows for review of the concepts, but also requires students to solve equations in the form  $f(x) = 0$ , which foreshadows solving  $f'(x) = 0$  in calculus. Graphing calculator and Desmos usage is provided, but optional. Examples that utilize graphing technology are clearly marked with an  icon. Exercises that require graphing technology are indicated with an  icon and the problem number is green. After completing the material in this text, a student will be adequately prepared for trigonometry, finite mathematics, and business calculus.

## Precalculus: A Right Triangle Approach to Trigonometry

This text contains all the material in *College Algebra*, but also develops the trigonometric functions using a right triangle approach and showing how it relates to the unit circle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator and Desmos usage is provided, but is optional. The final chapter provides an introduction to calculus, with a discussion of the limit, the derivative, and the integral of a function. After completing this text, a student will be adequately prepared for engineering calculus, business calculus, and finite mathematics.

## Precalculus: A Unit Circle Approach to Trigonometry

This text contains all the material in *College Algebra*, but also develops the trigonometric functions using a unit circle approach and showing how it relates to the right triangle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Graphing calculator and Desmos usage is provided, but is optional. The final chapter provides an introduction to calculus, with a discussion of the limit, the derivative, and the integral of a function. After completing this text, a student will be adequately prepared for engineering calculus, business calculus, and finite mathematics.

# Preface to the Instructor

---

As professors at both an urban university and a community college, Michael Sullivan and Michael Sullivan, III, are aware of the varied needs of Precalculus students, ranging from those who have little mathematical background and a fear of mathematics courses, to those having a strong mathematical education and a high level of motivation. For some of your students, this will be their last course in mathematics, whereas others will further their mathematical education. This text is written for both groups.

As a teacher, and as an author of precalculus, engineering calculus, finite mathematics, and business calculus texts, Michael Sullivan understands what students must know if they are to be focused and successful in upper-level math courses. However, as a father of four, he also understands the realities of college life. As an author of a developmental mathematics series, Michael's co-author and son, Michael Sullivan, III, understands the trepidations and skills students bring to the Precalculus course. Michael, III also believes in the value of technology as a tool for learning that enhances understanding without sacrificing math skills. Together, both authors have taken great pains to ensure that the text contains solid, student-friendly examples and problems, as well as a clear and seamless writing style.

A tremendous benefit of authoring a successful series is the broad-based feedback we receive from teachers and students. We are sincerely grateful for their support. Virtually every change in this edition is the result of their thoughtful comments and suggestions. We are sincerely grateful for this support and hope that we have been able to take these ideas and, building upon a successful first edition, make this series an even better tool for learning and teaching. We continue to encourage you to share with us your experiences teaching from this text.

## About This Book

This book utilizes a functions approach to Precalculus. Functions are introduced early (Chapter 1) in various formats: maps, tables, sets of ordered pairs, equations, and graphs. Our approach to functions illustrates the symbolic, numeric, graphic, and verbal representations of functions. This allows students to make connections between the visual representation of a function and its algebraic representation.

It is our belief that students need to “hit the ground running” so that they do not become complacent in their studies. After all, it is highly likely that students have been exposed to solving equations and inequalities prior to entering this class. By spending precious time reviewing these concepts, students are likely to think of the course as a rehash of material learned in other courses and say to themselves, “I know this material, so I don't have to study.” This may result in the students developing poor

study habits for this course. By introducing functions early in the course, students are less likely to develop bad habits.

Another advantage of the early introduction of functions is that the discussion of equations and inequalities can focus around the concept of a function. For example, rather than asking students to solve an equation such as  $2x^2 + 5x + 2 = 0$ , we ask students to find the zeros of  $f(x) = 2x^2 + 5x + 2$  or solve  $f(x) = 0$  when  $f(x) = 2x^2 + 5x + 2$ . While the technique used to solve this type of problem is the same, the fact that the problem looks different to the student means the student is less apt to say, “Oh, I already have seen this problem before, and I know how to solve it.” In addition, in Calculus students are going to be asked to solve equations such as  $f'(x) = 0$ , so solving  $f(x) = 0$  is a logical prerequisite skill to practice in Precalculus. Another advantage to solving equations through the eyes of a function is that the properties of functions can be included in the solution. For example, the linear function  $f(x) = 2x - 3$  has one real zero because the function  $f$  is increasing on its domain.

## Features in the Fourth Edition

Rather than provide a list of new features here, that information can be found on pages i–iii.

This places the features in their proper context, as building blocks of an overall learning system that has been carefully crafted over the years to help students get the most out of the time they put into studying. Please take the time to review the features listed on pages i–iii and to discuss them with your students at the beginning of your course. Our experience has been that when students utilize these features, they are more successful in the course.

## Changes in the Fourth Edition

### Content

- Desmos screen captures have been added throughout the text. This is done to recognize that graphing technology expands beyond graphing calculators.
- Definitions have been reviewed, and in a few cases, revised to be consistent with those presented in Calculus. For example, in the definitions for increasing/decreasing functions, we deleted the word “open,” allowing for functions to increase/decrease on any type of interval.

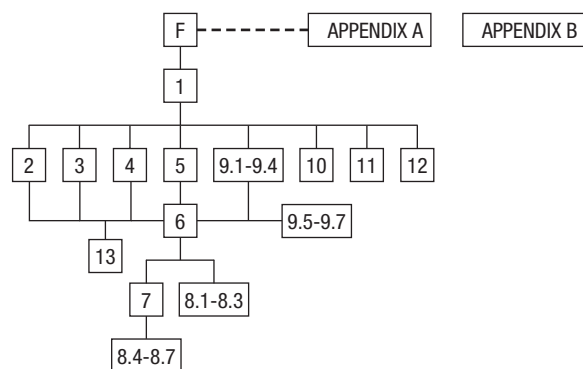

### Organization

- **Chapter F, Section 3** We moved the objective “Find the Equation of a Line Given Two Points” after the objective “Identify the Slope and  $y$ -Intercept of a Line from Its Equation”. This allows us to express lines in slope-intercept form.

## Using this Book Effectively and Efficiently with Your Syllabus

To meet the varied needs of diverse syllabi, this book contains more content than is likely to be covered in a typical Precalculus course. As the chart illustrates, this book has been organized with flexibility of use in mind. Even within a given chapter, certain sections are optional and can be omitted without loss of continuity. See the detail following the flow chart.

### Foundations A Prelude to Functions

Quick coverage of this chapter, which is mainly review material, will enable you to get to Chapter 1, *Functions and Their Graphs*, earlier.

### Chapter 1 Functions and Their Graphs

Perhaps the most important chapter. Sections 1.6 and 1.7 are optional.

### Chapter 2 Linear and Quadratic Functions

Topic selection depends on your syllabus. Sections 2.2, 2.6, and 2.7 may be omitted without a loss of continuity.

### Chapter 3 Polynomial and Rational Functions

Topic selection depends on your syllabus. Section 3.6 is optional.

### Chapter 4 Exponential and Logarithmic Functions

Sections 4.1–4.6 follow in sequence. Sections 4.7–4.9 are optional.

### Chapter 5 Trigonometric Functions

The sections follow in sequence. Section 5.8 is optional.

### Chapter 6 Analytic Trigonometry

Sections 6.2 and 6.7 may be omitted in a brief course.

### Chapter 7 Applications of Trigonometric Functions

Sections 7.4 and 7.5 may be omitted in a brief course.

### Chapter 8 Polar Coordinates; Vectors

Sections 8.1–8.3 and Sections 8.4–8.7 are independent and may be covered separately.

### Chapter 9 Analytic Geometry

Sections 9.1–9.4 follow in sequence. Sections 9.5, 9.6, and 9.7 are independent of each other, but each requires Sections 9.1–9.4.

### Chapter 10 Systems of Equations and Inequalities

Sections 10.2–10.7 may be covered in any order. Section 10.8 requires Section 10.7.

### Chapter 11 Sequences; Induction; the Binomial Theorem

There are three independent parts: Sections 11.1–11.3, Section 11.4, and Section 11.5.

### Chapter 12 Counting and Probability

The sections follow in sequence.

### Chapter 13 A Preview of Calculus: The Limit, Derivative, and Integral of a Function

If time permits, coverage of this chapter will provide your students with a beneficial head-start in calculus. The sections follow in sequence.

### Appendix A Review

This review material may be covered at the start of a course or used as a just-in-time review. Specific references to this material occur throughout the text to assist in the review process.

### Appendix B Graphing Utilities

Reference is made to these sections at the appropriate place in the text.

## Acknowledgments

Textbooks are written by authors, but evolve from an idea to final form through the efforts of many people. It was Don Dellen who first suggested this book and series. Don is remembered for his extensive contributions to publishing and mathematics.

Thanks are due to the following people for their assistance and encouragement to the preparation of this edition:

- From Pearson Education: Anne Kelly for her substantial contributions, ideas, and enthusiasm; Peggy Lucas, who is a huge fan and works tirelessly to get the word out; Dawn Murrin, for her unmatched talent at getting the details right; Peggy McMahon for her organizational skills and leadership in overseeing production; and the Pearson Math and Science Sales team, for their continued confidence and personal support of our books.
- Accuracy checkers: C. Brad Davis, who read the entire manuscript and accuracy checked answers. His attention to detail is amazing; Timothy Britt, for creating the Solutions Manuals and accuracy checking answers.
- Michael Sullivan, III would like to thank his colleagues at Joliet Junior College for their support and feedback.

Finally, we offer our grateful thanks to the dedicated users and reviewers of our books, whose collective insights form the backbone of each textbook revision.

Our list of indebtedness just grows and grows. And, if we've forgotten anyone, please accept our apology. Thank you all.

# Get the Most Out of MyLab Math

Used by over 3 million students a year, MyLab™ Math is the world's leading online program for teaching and learning mathematics. MyLab Math delivers assessment, tutorials, and multimedia resources that provide engaging and personalized experiences for each student, so learning can happen in any environment. Each course is developed to accompany Pearson's best-selling content, authored by thought leaders across the math curriculum, and can be easily customized to fit any course format.

## Preparedness

One of the biggest challenges in many mathematics courses is making sure students are adequately prepared with the prerequisite skills needed to successfully complete their course work. MyLab Math offers a variety of content and course options to support students with just-in-time remediation and key-concept review.

- **Skill Builder** offers adaptive practice that is designed to increase students' ability to complete their assignments. By monitoring student performance on their homework, Skill Builder adapts to each student's needs and provides just-in-time, in-assignment practice to help them improve their proficiency of key learning objectives.
- **Getting Ready** material provides just-in-time review, integrated throughout the course as needed to prepare students with prerequisite material to succeed. From a quick quiz, a personalized, just-in-time review assignment is generated for each student, allowing them to refresh forgotten concepts.

Objective: Use Descartes' rule of signs.

Watch the video and then solve the problem given below.

Click here to watch the video.

Determine the different possibilities for the numbers of positive, negative, and nonreal complex zeros for the following function.

$$f(x) = -3x^3 + 2x^2 - 3x + 5$$

What is the possible number of positive real zeros of this function?

(Use a comma to separate answers as needed.)

Enter your answer in the answer box and then click Click Answer.

# Resources for Success

**MyLab Math Online Course** **Precalculus: Concepts Through Functions, A Right Triangle Approach to Trigonometry** by Sullivan and Sullivan (access code required)

**MyLab Math** is available to accompany Pearson's market leading text offerings. To give students a consistent tone, voice, and teaching method each text's flavor and approach is tightly integrated throughout the accompanying **MyLab Math** course, making learning the material as seamless as possible.

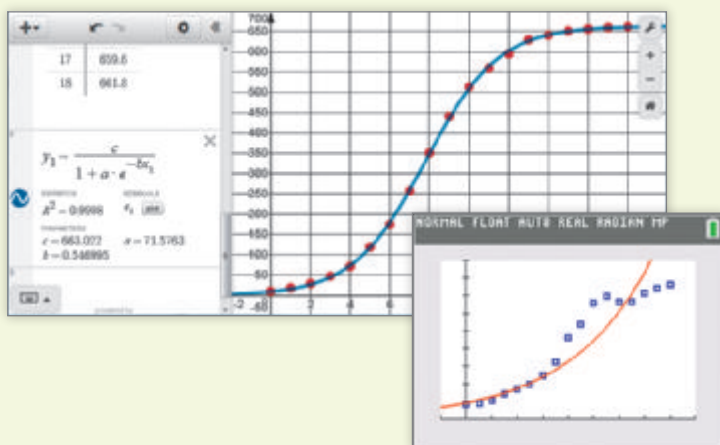

## Video Program and Resources

**Author in Action Videos** are actual classroom lectures with fully worked out examples presented by Michael Sullivan III.

- **Video assessment** questions are available to assign in MyLab Math for key Author in Action videos.
- The corresponding **Guided Lecture Notes** assist students in taking thorough, organized, and understandable notes while watching Author in Action videos.

## Retain Your Knowledge

**Updated!** Retain Your Knowledge Exercises support ongoing review at the course level and help students maintain essential skills. These are excellent cumulative review problems and are perfect for studying for final exams. Retain Your Knowledge Exercises are available to assign in **MyLab Math** and in the text.

## Graphing Images

**Updated!** Throughout each chapter TI-84 Plus C and Desmos® screenshots appear. These images help students visualize concepts clearly and make stronger connections among equations, data and graphs in full color; using the graphing technology they are most familiar with.

## Sample Assignments

**Enhanced Sample Assignments** make course set-up easier by giving instructors a starting point for each chapter. Each assignment, handpicked by the author to align with this text, includes a thoughtful mix of question types (e.g., conceptual, skills, etc.) specific to that topic.

# Resources for Success

## Instructor Resources

### Annotated Instructor's Edition

ISBN 10: 013469001X    ISBN 13: 9780134690018

The Annotated Instructor's Edition includes answers to the exercises sets. Shorter answers are on the page beside the exercises, and longer answers are in the back of the text.

The following resources can be downloaded from [www.pearson.com](http://www.pearson.com) or at [www.pearson.com/mylab/math](http://www.pearson.com/mylab/math)

### Learning Catalytics Question Library

Questions written by Michael Sullivan III are available to deliver through Learning Catalytics to engage students in your course.

### PowerPoint® Lecture Slides

Fully editable slides that correlate to the textbook.

### Instructor Solutions Manual

Includes fully worked solutions to all textbook exercises.

### TestGen®

TestGen® ([www.pearson.com/testgen](http://www.pearson.com/testgen)) enables instructors to build, edit, print, and administer tests using a computerized bank of questions developed to cover all the objectives of the text.

### Mini Lecture Notes

Includes additional examples and helpful teaching tips, by section.

### Online Chapter Projects

Additional projects that let students apply what was learned in the chapter.

## Student Resources

Additional resources to help student success:

### Lecture Video

Author in Action videos are actual classroom lectures with fully worked-out examples presented by Michael Sullivan III. All videos are assignable with video assessment questions within MyLab Math.

### Chapter Test Prep Videos

Students can watch instructors work through step-by-step solutions to all chapter test exercises from the textbook. These are available in MyLab Math and on YouTube.

### Student Solutions Manual

Provides detailed worked-out solutions to odd-numbered exercises.

### Guided Lecture Notes

These lecture notes assist students in taking thorough, organized, and understandable notes while watching Author in Action videos. Students actively participate in learning the how/why of important concepts through explorations and activities. The Guided Lecture Notes are available as PDF's and customizable Word files in MyLab Math. They can also be packaged with the textbook and MyLab Math access code.

### Algebra Review

Four chapters of Intermediate Algebra review. Perfect for a slower-paced course or for individual review.

### Skills for Success

Online module found in MyLab Math that supports students continued success in college. This module provides tutorial and guidance on a variety of topics, including transition to college, online learning, time management and professional development skills.

# Applications Index

---

## Acoustics

amplifying sound, 381  
loudness of sound, 330, 383  
loudspeaker, 600  
tuning fork, 600  
whispering galleries, 700

## Aerodynamics

modeling aircraft motion, 681

## Agriculture

farm management, 836  
farm workers in U.S., 368  
field enclosure, 821  
grazing area for cow, 591–592  
minimizing cost, 836  
removing stump, 653

## Air travel

bearing of aircraft, 567  
frequent flyer miles, 576  
holding pattern, 461, 519  
intersection point of two planes, 107–108  
parking at O'Hare International Airport, 90  
revising a flight plan, 584  
speed and direction of aircraft, 647–648, 651

## Archaeology

age of ancient tools, 362  
age of fossil, 367  
age of tree, 367  
date of prehistoric man's death, 382

## Architecture

brick staircase, 860, 884  
Burj Khalifa building, A15  
floor design, 858–859, 884  
football stadium seating, 860  
mosaic design, 860, 884  
Norman window, 178, A21  
One World Trade Center, 423  
parabolic arch, 178  
racetrack design, 702  
special window, 178, 179  
stadium construction, 860  
window design, 178

## Area. *See also* Geometry

of Bermuda Triangle, 591  
under a curve, 503–504  
of isosceles triangle, 551  
of sector of circle, 394, 397  
of segment of circle, 603

## Art

fine decorative pieces, 423

## Astronomy

angle of elevation of Sun, 566  
distances of planets from Sun, 854

planetary orbits, 703

Earth, 703  
Jupiter, 703  
Mars, 703  
Mercury, 729  
Pluto, 703

## Aviation

modeling aircraft motion, 681  
orbital launches, 761

## Biology

age versus total cholesterol, 377  
alcohol and driving, 325–326, 331  
bacterial growth, 360–361, 374  
    *E. coli*, 80, 126–127  
beehive cell surface area, 434  
blood pressure, 518–519  
blood types, 892  
bone length, 192–193  
cricket chirping, 180  
gestation period, 189  
healing of wounds, 316, 330  
maternal age versus Down syndrome, 143  
muscle force, 652  
yeast biomass as function of time, 373

## Business

advertising, 33, 142, 193, 377  
automobile production, 287, 777  
blending coffee, A81  
checkout lines, 911  
clothing store, 913  
cookie orders, 840  
cost  
    of can, 261–262, 264  
    of commodity, 288  
    of manufacturing, 272, 829, A13, A81  
    marginal, 166, 192  
    minimizing, 192, 836, 841  
    of production, 79, 287, 804, 841  
    of theater ticket per student, 273  
    of transporting goods, 91  
    weekly, 213–214  
cost equation, 32, 115  
cost function, 135  
    average, 62–63  
demand  
    for candy, 115  
demand equation, 192, 278  
discounts, 288  
drive-thru rate  
    at Burger King, 312  
    at Citibank, 316, 330  
earnings of young adults, 748  
equipment depreciation, 870  
ethanol production, 374  
expense computation, A82  
Jiffy Lube's car arrival rate, 316, 330  
managing a meat market, 836  
milk production, 375  
mixing candy, A81  
mixing nuts, A81  
new-car markup, A91  
orange juice production, 777  
precision ball bearings, A13  
presale order, 761  
product design, 837  
production scheduling, 836  
product promotion, 33  
profit, 804–805  
    maximizing, 834–835, 836–837  
profit function, 58, 166  
rate of return on, 357  
restaurant management, 761  
revenue, 166, 170, 377, A81  
    airline, 837  
    from calculator sales, 156  
    of clothing store, 794  
    daily, 166  
    from digital music, 105  
    instantaneous rate of change of, 943, 952–953  
    maximizing, 166, 177  
    monthly, 166  
    from seating, 871  
    theater, 762  
revenue equation, 115  
salary, 860  
    gross, 57  
    increases in, 870, 884  
sales  
    commission on, 192, A91  
    of movie theater ticket, 749, 753–754, 761  
    net, 8  
salvage value, 382  
straight-line depreciation, 130–131, 134–135  
supply and demand, 131–132, 134  
tax, 272  
toy truck manufacturing, 829  
transporting goods, 830  
truck rentals, 32, 135  
unemployment, 913  
wages  
    of car salesperson, 32

## Calculus

area under a curve, 503–504  
carrying a ladder around a corner, 519  
maximizing rain gutter construction, 550  
projectile motion, 519  
Simpson's rule, 179

## Carpentry. *See also* Construction

pitch, 34

**Chemistry**

alpha particles, 715  
 decomposition reactions, 367  
 drug concentration, 264  
 ethanol production, 374  
 gas laws, 116  
 pH, 329  
 purity of gold, A83  
 radioactive decay, 366, 367, 374–375, 382  
 radioactivity from Chernobyl, 368  
 reactions, 179  
 salt solutions, A83  
 sugar molecules, A83  
 volume of gas, A91

**Combinatorics**

airport codes, 894  
 binary codes, 913  
 birthday permutations, 896, 900, 907–908, 912, 913  
 blouses and skirts combinations, 892  
 book arrangements, 900  
 box stacking, 900  
 code formation, 900  
 combination locks, 901  
 committee formation, 898, 900, 901, 913  
     Senate committees, 901  
 flag arrangement, 899, 913  
 letter codes, 894, 914  
 letter combinations, 913  
 license plate possibilities, 900, 913, 914  
 lining people up, 895, 900  
 number formation, 892, 900, 901, 914  
 objects selection, 901  
 seating arrangements, 913  
 shirts and ties combinations, 892  
 telephone numbers, 913  
 two-symbol codewords, 891  
 word formation, 898–899, 901, 914

**Communications**

cell phone towers, 376  
 data plan, 43, 79–80, 122, 135  
 installing cable TV, 110  
 phone charges, 134  
 satellite dish, 689–690, 692  
 spreading of rumors, 316, 330  
 surveillance satellites, 568  
 tablet service, 90  
 Touch-Tone phones, 555–556, 601

**Computers and computing**

graphics, 653, 805–806  
 households without personal computers, 368  
 laser printers, A82  
 LCD monitors, 192  
 social media/networking, 369, 375  
 three-click rule for web design, 805  
 website map, 805  
 Word users, 368

**Construction**

of box, 821  
     closed, 120  
     open, 111

of brick staircase, 884  
 of can, 276  
 of coffee can, A83  
 of cylindrical tube, 821  
 of enclosures  
     around garden, A82  
     around pond, A82  
     maximizing area of, 173, 177–178  
 of fencing, 173, 177–178, 821  
     minimum cost for, 264  
 of flashlight, 692  
 of headlight, 692  
 of highway, 422, 577, 603  
 installing cable TV, 110  
 of open box, 154  
 pitch of roof, 567  
 of rain gutter, 178, 416–417, 550  
 of ramp, 576  
     access ramp, 33  
 of rectangular field enclosure, 177–178  
 of stadium, 178–179, 860  
 of steel drum, 265  
 of swimming pool, A21  
 of swing set, 585  
 of tent, 590  
 TV dish, 692  
 vent pipe installation, 702  
 of walkway, 487

**Cryptography**

matrices in, 805

**Culture and society**

marriage, 331

**Decorating**

Christmas tree, A16

**Demographics**

birth rate  
     mother's age and, 180  
     of unmarried women, 166  
 diversity index, 329–330  
 life expectancy, A90  
 marital status, 893  
 mosquito colony growth, 367  
 population. *See* Population  
 rabbit colony growth, 853

**Design**

of awning, 578  
 of box with minimum surface area, 264  
 of fine decorative pieces, 423  
 of Little League Field, 400  
 of water sprinkler, 398

**Direction**

of aircraft, 651

 pig roasts, 368  
 warming time of Beer stein, 367

## **Forensics**

identifying remains, 584–585

## **Forestry**

wood product classification, 366

## **Games**

die rolling, 903–904, 905, 914  
 grains of wheat on a chess board, 871  
 Powerball, 912, 915

## **Gardens and gardening. *See also* Landscaping**

enclosure for, A82

## **Geography**

area of Bermuda Triangle, 591  
 area of lake, 590, 603  
 grade of a mountain trail, 822  
 inclination of hill, 660  
 inclination of mountain trail, 564, 603  
 length of lake, 486

## **Geology**

earthquakes, 331

## **Geometry**

angle between two lines, 541  
 balloon volume, 287  
 circle  
   area of, 590, A81  
   area of sector of, 394, 398  
   circumference of, A7, A12, A81  
   equation of, 788  
   inscribed, 109, 592  
   length of chord of, 585  
   radius of, 821  
 collinear points, 788  
 cone volume, 116, 288  
 cube  
   length of edge of, 233  
   surface area of, A13  
   volume of, A13  
 cylinder  
   inscribing in cone, 110  
   inscribing in sphere, 110  
   volume of, 116, 288  
 Descartes’s method of equal roots, 821–822  
 dodecagon, area of, 540–541  
 equation of line, 788  
 ladder angle, 604  
 octagon, area of, 551  
 polygon  
   area of, 788  
   number of sides of, 154  
 quadrilateral area, 591, 604

rectangle  
   area of, 57, 107, 192, 399, 703, A12  
   dimensions of, 192, 821  
   inscribed in semicircle, 109, 551  
   perimeter of, A12  
   semicircle inscribed in, 109  
 semicircle area, 590, 604–605  
 sphere  
   surface area of, A13  
   volume of, A13  
 square  
   area of, A21, A81  
   perimeter of, A81  
   shaded, 871  
 surface area  
   of balloon, 287  
   of cube, A13  
   of sphere, A13  
 triangle  
   area of, 590, 604, 788, A12  
   circumscribing, 579  
   equilateral, A12–A13  
   inscribed in circle, 109  
   isosceles, 57, 411, 821  
   Pascal, 853  
   perimeter of, A13  
   right, 420, 566  
   sides of, 605  
 volume of parallelepiped, 676

## **Government**

federal income tax, 58, 91, 300–301, A91  
 first-class mail charge, 92  
 national debt, 80

## **Health. *See also* Medicine**

breast cancer survival rate, 374

## What Is My House Worth?

There are many factors that play a role in the value of a home. Everyone knows the golden rule of real estate—Location, Location, Location! Aside from where a property is located, one must consider the size of the home, number of bedrooms, number of bathrooms, status of updates within the home, and many, many other considerations.

Zillow ([www.zillow.com](http://www.zillow.com)) developed a model (an equation) that is used to approximate the value of a home. This approximate value is called a Zestimate. According to Zillow, the Zestimate is the estimated market value for an individual home. Zillow uses available information on the millions of homes that have sold around the country to arrive at its Zestimate. Mainly, Zillow uses the physical attributes of the home, tax assessments, and transaction data to arrive at its Zestimate. Homeowners are free to report updated home facts about their particular property in order to improve the Zestimate. The accuracy of the Zestimate is dependent upon the location of the home. For example, Zestimates in the Chicago area have some of the best Zestimates (60.9% of homes sold within 5% of the Zestimate), while Zestimates in Cleveland, OH are only fair (44.2% of the homes sold within 5% of the sale price).

## ← A Look Back

Appendix A reviews skills from Intermediate Algebra.

## A Look Ahead →

Here we connect algebra and geometry using the rectangular coordinate system. In the 1600s, algebra had developed to the point that René Descartes (1596–1650) and Pierre de Fermat (1601–1665) were able to use rectangular coordinates to translate geometry problems into algebra problems, and vice versa. This enabled both geometers and algebraists to gain new insights into their subjects, which had been thought to be separate but now were seen as connected.

- Chapter Project

## F.1 The Distance and Midpoint Formulas

**PREPARING FOR THIS SECTION** Before getting started, review the following:

- Algebra Essentials (Appendix A, Section A.1, pp. A1–A10)
- Geometry Essentials (Appendix A, Section A.2, pp. A14–A19)

 Now Work the 'Are You Prepared?' problems on page 6.

- OBJECTIVES**
- 1 Use the Distance Formula (p. 3)
  - 2 Use the Midpoint Formula (p. 5)

### Rectangular Coordinates

A point on the real number line is located by a single real number called the *coordinate of the point*. For work in a two-dimensional plane, points are located by using two numbers.

Begin with two real number lines located in the same plane: one horizontal and the other vertical. The horizontal line is called the **x-axis**, the vertical line the **y-axis**, and the point of intersection the **origin**  $O$ . See Figure 1. Assign coordinates to every point on these number lines using a convenient scale. Recall that the scale of a number line is the distance between 0 and 1. In mathematics, we usually use the same scale on each axis, but in applications, a different scale is often used.

The origin  $O$  has a value of 0 on both the  $x$ -axis and the  $y$ -axis. Points on the  $x$ -axis to the right of  $O$  are associated with positive real numbers, and those to the left of  $O$  are associated with negative real numbers. Points on the  $y$ -axis above  $O$  are associated with positive real numbers, and those below  $O$  are associated with negative real numbers. In Figure 1, the  $x$ -axis and  $y$ -axis are labeled as  $x$  and  $y$ , respectively, and an arrow at the end of each axis is used to denote the positive direction.

The coordinate system described here is called a **rectangular** or **Cartesian\*** **coordinate system**. The plane formed by the  $x$ -axis and  $y$ -axis is sometimes called the **xy-plane**, and the  $x$ -axis and  $y$ -axis are referred to as the **coordinate axes**.

Any point  $P$  in the  $xy$ -plane can be located by using an **ordered pair**  $(x, y)$  of real numbers. Let  $x$  denote the signed distance of  $P$  from the  $y$ -axis (*signed* means that if  $P$  is to the right of the  $y$ -axis, then  $x > 0$ , and if  $P$  is to the left of the  $y$ -axis, then  $x < 0$ ); and let  $y$  denote the signed distance of  $P$  from the  $x$ -axis. The ordered pair  $(x, y)$ , also called the **coordinates** of  $P$ , then gives us enough information to locate the point  $P$  in the plane.

For example, to locate the point whose coordinates are  $(-3, 1)$ , go 3 units along the  $x$ -axis to the left of  $O$  and then go straight up 1 unit. We **plot** this point by placing a dot at this location. See Figure 2, in which the points with coordinates  $(-3, 1)$ ,  $(-2, -3)$ ,  $(3, -2)$ , and  $(3, 2)$  are plotted.

The origin has coordinates  $(0, 0)$ . Any point on the  $x$ -axis has coordinates of the form  $(x, 0)$ , and any point on the  $y$ -axis has coordinates of the form  $(0, y)$ .

If  $(x, y)$  are the coordinates of a point  $P$ , then  $x$  is called the **x-coordinate**, or **abscissa**, of  $P$ , and  $y$  is the **y-coordinate**, or **ordinate**, of  $P$ . We identify the point  $P$  by its coordinates  $(x, y)$  by writing  $P = (x, y)$ . Usually, we will simply say, “the point  $(x, y)$ ” rather than “the point whose coordinates are  $(x, y)$ .”

The coordinate axes divide the  $xy$ -plane into four sections called **quadrants**, as shown in Figure 3. In quadrant I, both the  $x$ -coordinate and the  $y$ -coordinate of all points are positive; in quadrant II,  $x$  is negative and  $y$  is positive; in quadrant III, both  $x$  and  $y$  are negative; and in quadrant IV,  $x$  is positive and  $y$  is negative. Points on the coordinate axes belong to no quadrant.

Figure 1  $xy$ -Plane

Figure 2

Figure 3

 **NOW WORK** PROBLEM 15

\*Named after René Descartes (1596–1650), a French mathematician, philosopher, and theologian.

Figure 4 TI-84 Plus C standard viewing rectangle

**COMMENT** On a graphing calculator, you can set the scale on each axis. Once this has been done, you obtain the **viewing rectangle**. See Figure 4 for a typical viewing rectangle. You should now read Section B.1, *The Viewing Rectangle*, in Appendix B.

## 1 Use the Distance Formula

If the same units of measurement (such as inches, centimeters, and so on) are used for both the  $x$ -axis and  $y$ -axis, then all distances in the  $xy$ -plane can be measured using this unit of measurement.

### EXAMPLE 1

#### Finding the Distance between Two Points

Find the distance  $d$  between the points  $(1, 3)$  and  $(5, 6)$ .

#### Solution

First plot the points  $(1, 3)$  and  $(5, 6)$  and connect them with a straight line. See Figure 5(a). To find the length  $d$ , begin by drawing a horizontal line from  $(1, 3)$  to  $(5, 3)$  and a vertical line from  $(5, 3)$  to  $(5, 6)$ , forming a right triangle, as shown in Figure 5(b). One leg of the triangle is of length 4 (since  $|5 - 1| = 4$ ), and the other is of length 3 (since  $|6 - 3| = 3$ ). By the Pythagorean Theorem, the square of the distance  $d$  that we seek is

$$d^2 = 4^2 + 3^2 = 16 + 9 = 25$$

$$d = \sqrt{25} = 5$$

Figure 5

The **distance formula** provides a straightforward method for computing the distance between two points.

### THEOREM

#### Distance Formula

The distance between two points  $P_1 = (x_1, y_1)$  and  $P_2 = (x_2, y_2)$ , denoted by  $d(P_1, P_2)$ , is

$$d(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \quad (1)$$

#### In Words

To compute the distance between two points, find the difference of the  $x$ -coordinates, square it, and add this to the square of the difference of the  $y$ -coordinates. The square root of this sum is the distance.

**Proof of the Distance Formula** Let  $(x_1, y_1)$  denote the coordinates of point  $P_1$  and let  $(x_2, y_2)$  denote the coordinates of point  $P_2$ . Assume that the line joining  $P_1$  and  $P_2$  is neither horizontal nor vertical. Refer to Figure 6(a). The coordinates of  $P_3$  are  $(x_2, y_1)$ . The horizontal distance from  $P_1$  to  $P_3$  is the absolute value of the difference of the  $x$ -coordinates,  $|x_2 - x_1|$ . The vertical distance from  $P_3$  to  $P_2$  is the

Figure 6

absolute value of the difference of the  $y$ -coordinates,  $|y_2 - y_1|$ . See Figure 6(b). The distance  $d(P_1, P_2)$  that we seek is the length of the hypotenuse of the right triangle, so, by the Pythagorean Theorem, it follows that

$$\begin{aligned} [d(P_1, P_2)]^2 &= |x_2 - x_1|^2 + |y_2 - y_1|^2 \\ &= (x_2 - x_1)^2 + (y_2 - y_1)^2 \\ d(P_1, P_2) &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \end{aligned}$$

Now, if the line joining  $P_1$  and  $P_2$  is horizontal, then the  $y$ -coordinate of  $P_1$  equals the  $y$ -coordinate of  $P_2$ ; that is,  $y_1 = y_2$ . Refer to Figure 7(a). In this case, the distance formula (1) still works, because, for  $y_1 = y_2$ , it reduces to

$$d(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + 0^2} = \sqrt{(x_2 - x_1)^2} = |x_2 - x_1|$$

Figure 7

A similar argument holds if the line joining  $P_1$  and  $P_2$  is vertical. See Figure 7(b). ●

## EXAMPLE 2

### Using the Distance Formula

Find the distance  $d$  between the points  $(-3, 5)$  and  $(3, 2)$ .

#### Solution

Use the distance formula, equation (1), with  $P_1 = (x_1, y_1) = (-3, 5)$  and  $P_2 = (x_2, y_2) = (3, 2)$ . Then

$$\begin{aligned} d &= \sqrt{[3 - (-3)]^2 + (2 - 5)^2} = \sqrt{6^2 + (-3)^2} \\ &= \sqrt{36 + 9} \\ &= \sqrt{45} \\ &= 3\sqrt{5} \approx 6.71 \end{aligned}$$

**NOW WORK** PROBLEMS 19 AND 23

The distance between two points  $P_1 = (x_1, y_1)$  and  $P_2 = (x_2, y_2)$  is never a negative number. Furthermore, the distance between two points is 0 only when the points are identical—that is, when  $x_1 = x_2$  and  $y_1 = y_2$ . Also, because  $(x_2 - x_1)^2 = (x_1 - x_2)^2$  and  $(y_2 - y_1)^2 = (y_1 - y_2)^2$ , it makes no difference whether the distance is computed from  $P_1$  to  $P_2$  or from  $P_2$  to  $P_1$ ; that is,  $d(P_1, P_2) = d(P_2, P_1)$ .

The introduction to this chapter mentioned that rectangular coordinates enable us to translate geometry problems into algebra problems, and vice versa. The next example shows how algebra (the distance formula) can be used to solve geometry problems.

## EXAMPLE 3

### Using Algebra to Solve Geometry Problems

Consider the three points  $A = (-2, 1)$ ,  $B = (2, 3)$ , and  $C = (3, 1)$ .

- Plot each point and form the triangle  $ABC$ .
- Find the length of each side of the triangle.
- Verify that the triangle is a right triangle.
- Find the area of the triangle.

**Solution****Figure 8**

- (a) Figure 8 shows the points  $A, B, C$  and the triangle  $ABC$ .  
 (b) To find the length of each side of the triangle, use the distance formula, equation (1).

$$d(A, B) = \sqrt{[2 - (-2)]^2 + (3 - 1)^2} = \sqrt{16 + 4} = \sqrt{20} = 2\sqrt{5}$$

$$d(B, C) = \sqrt{(3 - 2)^2 + (1 - 3)^2} = \sqrt{1 + 4} = \sqrt{5}$$

$$d(A, C) = \sqrt{[3 - (-2)]^2 + (1 - 1)^2} = \sqrt{25 + 0} = 5$$

- (c) If the sum of the squares of the lengths of two of the sides equals the square of the length of the third side, then the triangle is a right triangle. Looking at Figure 8, it seems reasonable to conjecture that the right angle is at vertex  $B$ . We shall check to see whether

$$[d(A, B)]^2 + [d(B, C)]^2 = [d(A, C)]^2$$

Using the results from part (b) yields

$$\begin{aligned} [d(A, B)]^2 + [d(B, C)]^2 &= (2\sqrt{5})^2 + (\sqrt{5})^2 \\ &= 20 + 5 = 25 = [d(A, C)]^2 \end{aligned}$$

It follows from the converse of the Pythagorean Theorem that triangle  $ABC$  is a right triangle.

- (d) Because the right angle is at vertex  $B$ , the sides  $AB$  and  $BC$  form the base and height of the triangle. Its area is

$$\text{Area} = \frac{1}{2} (\text{Base}) (\text{Height}) = \frac{1}{2} (2\sqrt{5}) (\sqrt{5}) = 5 \text{ square units}$$

**Now Work PROBLEM 33****2 Use the Midpoint Formula****Figure 9** Illustration of midpoint

We now derive a formula for the coordinates of the **midpoint of a line segment**. Let  $P_1 = (x_1, y_1)$  and  $P_2 = (x_2, y_2)$  be the endpoints of a line segment, and let  $M = (x, y)$  be the point on the line segment that is the same distance from  $P_1$  as it is from  $P_2$ . See Figure 9. The triangles  $P_1AM$  and  $MBP_2$  are congruent. [Do you see why? Angle  $AP_1M =$  angle  $BMP_2$ ,\* angle  $P_1MA =$  angle  $MP_2B$ , and  $d(P_1, M) = d(M, P_2)$  is given. Thus we have angle-side-angle.] Hence, corresponding sides are equal in length. That is,

$$x - x_1 = x_2 - x \quad \text{and} \quad y - y_1 = y_2 - y$$

$$2x = x_1 + x_2 \quad 2y = y_1 + y_2$$

$$x = \frac{x_1 + x_2}{2} \quad y = \frac{y_1 + y_2}{2}$$

**THEOREM****Midpoint Formula**

The midpoint  $M = (x, y)$  of the line segment from  $P_1 = (x_1, y_1)$  to  $P_2 = (x_2, y_2)$  is

$$M = (x, y) = \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right) \quad (2)$$

**In Words**

To find the midpoint of a line segment, average the  $x$ -coordinates of the endpoints, and average the  $y$ -coordinates of the endpoints.

\*A postulate from geometry states that the transversal  $\overline{P_1P_2}$  forms congruent corresponding angles with the parallel line segments  $\overline{P_1A}$  and  $\overline{MB}$ .

**EXAMPLE 4****Finding the Midpoint of a Line Segment**

Find the midpoint of the line segment from  $P_1 = (-5, 5)$  to  $P_2 = (3, 1)$ . Plot the points  $P_1$  and  $P_2$  and the midpoint.

**Solution**

Apply the midpoint formula (2) using  $x_1 = -5$ ,  $y_1 = 5$ ,  $x_2 = 3$ , and  $y_2 = 1$ . Then the coordinates  $(x, y)$  of the midpoint  $M$  are

$$x = \frac{x_1 + x_2}{2} = \frac{-5 + 3}{2} = -1 \quad \text{and} \quad y = \frac{y_1 + y_2}{2} = \frac{5 + 1}{2} = 3$$

That is,  $M = (-1, 3)$ . See Figure 10.

Figure 10

**Now Work** PROBLEM 39

**F.1 Assess Your Understanding**

**'Are You Prepared?'** Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

- On the real number line the origin is assigned the number \_\_\_\_\_. (p. A4)
- If  $-3$  and  $5$  are the coordinates of two points on the real number line, the distance between these points is \_\_\_\_\_. (p. A6)
- If  $3$  and  $4$  are the legs of a right triangle, the hypotenuse is \_\_\_\_\_. (pp. A14–A15)
- Use the converse of the Pythagorean Theorem to show that a triangle whose sides are of lengths  $11$ ,  $60$ , and  $61$  is a right triangle. (pp. A14–A15)
- The area  $A$  of a triangle whose base is  $b$  and whose altitude is  $h$  is  $A = \underline{\hspace{1cm}}$ . (p. A15)
- True or False** Two triangles are congruent if two angles and the included side of one equals two angles and the included side of the other. (pp. A16–A17)

**Concepts and Vocabulary**

- If  $(x, y)$  are the coordinates of a point  $P$  in the  $xy$ -plane, then  $x$  is called the \_\_\_\_\_ of  $P$ , and  $y$  is the \_\_\_\_\_ of  $P$ .
- The coordinate axes divide the  $xy$ -plane into four sections called \_\_\_\_\_.
- If three distinct points  $P$ ,  $Q$ , and  $R$  all lie on a line, and if  $d(P, Q) = d(Q, R)$ , then  $Q$  is called the \_\_\_\_\_ of the line segment from  $P$  to  $R$ .
- True or False** The distance between two points is sometimes a negative number.
- True or False** The point  $(-1, 4)$  lies in quadrant IV of the Cartesian plane.
- True or False** The midpoint of a line segment is found by averaging the  $x$ -coordinates and averaging the  $y$ -coordinates of the endpoints.
- Which of the following statements is true for a point  $(x, y)$  that lies in quadrant III?
  - Both  $x$  and  $y$  are positive.
  - Both  $x$  and  $y$  are negative.
  - $x$  is positive, and  $y$  is negative.
  - $x$  is negative, and  $y$  is positive.
- Choose the formula that gives the distance between two points  $(x_1, y_1)$  and  $(x_2, y_2)$ .
  - $\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$
  - $\sqrt{(x_2 + x_1)^2 - (y_2 + y_1)^2}$
  - $\sqrt{(x_2 - x_1)^2 - (y_2 - y_1)^2}$
  - $\sqrt{(x_2 + x_1)^2 + (y_2 + y_1)^2}$

**Skill Building**

In Problems 15 and 16, plot each point in the  $xy$ -plane. Tell in which quadrant or on what coordinate axis each point lies.

- $A = (-3, 2)$
  - $B = (6, 0)$
  - $C = (-2, -2)$
  - $D = (6, 5)$
  - $E = (0, -3)$
  - $F = (6, -3)$
- $A = (1, 4)$
  - $B = (-3, -4)$
  - $C = (-3, 4)$
  - $D = (4, 1)$
  - $E = (0, 1)$
  - $F = (-3, 0)$
- Plot the points  $(2, 0)$ ,  $(2, -3)$ ,  $(2, 4)$ ,  $(2, 1)$ , and  $(2, -1)$ . Describe the set of all points of the form  $(2, y)$ , where  $y$  is a real number.
- Plot the points  $(0, 3)$ ,  $(1, 3)$ ,  $(-2, 3)$ ,  $(5, 3)$ , and  $(-4, 3)$ . Describe the set of all points of the form  $(x, 3)$ , where  $x$  is a real number.

In Problems 19–32, find the distance  $d(P_1, P_2)$  between the points  $P_1$  and  $P_2$ .

19.

20.

21.

22.

23.

$$P_1 = (3, -4); P_2 = (5, 4)$$

$$25. P_1 = (-3, 2); P_2 = (6, 0)$$

$$29. P_1 = (-0.2, 0.3); P_2 = (2.3, 1.1)$$

$$31. P_1 = (a, b); P_2 = (0, 0)$$

$$24. P_1 = (-1, 0); P_2 = (2, 4)$$

$$26. P_1 = (2, -3); P_2 = (4, 2)$$

$$28. P_1 = (-4, -3); P_2 = (6, 2)$$

$$30. P_1 = (1.2, 2.3); P_2 = (-0.3, 1.1)$$

$$32. P_1 = (a, a); P_2 = (0, 0)$$

In Problems 33–38, plot each point and form the triangle  $ABC$ . Verify that the triangle is a right triangle. Find its area.

33.

$$A = (-2, 5); B = (1, 3); C = (-1, 0)$$

$$35. A = (-5, 3); B = (6, 0); C = (5, 5)$$

$$37. A = (4, -3); B = (0, -3); C = (4, 2)$$

$$34. A = (-2, 5); B = (12, 3); C = (10, -11)$$

$$36. A = (-6, 3); B = (3, -5); C = (-1, 5)$$

$$38. A = (4, -3); B = (4, 1); C = (2, 1)$$

In Problems 39–48, find the midpoint of the line segment joining the points  $P_1$  and  $P_2$ .

39.

$$P_1 = (3, -4); P_2 = (5, 4)$$

$$41. P_1 = (-3, 2); P_2 = (6, 0)$$

$$43. P_1 = (4, -2); P_2 = (-2, -5)$$

$$45. P_1 = (-0.2, 0.3); P_2 = (2.3, 1.1)$$

$$47. P_1 = (a, b); P_2 = (0, 0)$$

$$40. P_1 = (-2, 0); P_2 = (2, 4)$$

$$42. P_1 = (2, -3); P_2 = (4, 2)$$

$$44. P_1 = (-4, -3); P_2 = (2, 2)$$

$$46. P_1 = (1.2, 2.3); P_2 = (-0.3, 1.1)$$

$$48. P_1 = (a, a); P_2 = (0, 0)$$

## Applications and Extensions

49. Find all points having an  $x$ -coordinate of 2 whose distance from the point  $(-2, -1)$  is 5.

50. Find all points having a  $y$ -coordinate of  $-3$  whose distance from the point  $(1, 2)$  is 13.

51. Find all points on the  $x$ -axis that are 5 units from the point  $(4, -3)$ .

52. Find all points on the  $y$ -axis that are 5 units from the point  $(4, 4)$ .

53. **Geometry** The **medians** of a triangle are the line segments from each vertex to the midpoint of the opposite side (see the figure). Find the lengths of the medians of the triangle with vertices at  $A = (0, 0)$ ,  $B = (6, 0)$ , and  $C = (4, 4)$ .

54. **Geometry** An **equilateral triangle** is one in which all three sides are of equal length. If two vertices of an equilateral triangle are  $(0, 4)$  and  $(0, 0)$ , find the third vertex. How many of these triangles are possible?

55. **Geometry** Find the midpoint of each diagonal of a square with side of length  $s$ . Draw the conclusion that the diagonals of a square intersect at their midpoints.

[Hint: Use  $(0, 0)$ ,  $(0, s)$ ,  $(s, 0)$ , and  $(s, s)$  as the vertices of the square.]

56. **Geometry** Verify that the points  $(0, 0)$ ,  $(a, 0)$ , and  $(\frac{a}{2}, \frac{\sqrt{3}a}{2})$  are the vertices of an equilateral triangle. Then show that the midpoints of the three sides are the vertices of a second equilateral triangle (refer to Problem 54).

In Problems 57–60, find the length of each side of the triangle determined by the three points  $P_1$ ,  $P_2$ , and  $P_3$ . State whether the triangle is an **isosceles triangle**, a **right triangle**, neither of these, or both. (An **isosceles triangle** is one in which at least two of the sides are of equal length.)

$$57. P_1 = (2, 1); P_2 = (-4, 1); P_3 = (-4, -3)$$

$$58. P_1 = (-1, 4); P_2 = (6, 2); P_3 = (4, -5)$$

$$59. P_1 = (-2, -1); P_2 = (0, 7); P_3 = (3, 2)$$

$$60. P_1 = (7, 2); P_2 = (-4, 0); P_3 = (4, 6)$$

61. **Baseball** A major league baseball “diamond” is actually a square 90 feet on a side (see the figure). What is the distance directly from home plate to second base (the diagonal of the square)?

- 62. Little League Baseball** The layout of a Little League playing field is a square 60 feet on a side. How far is it directly from home plate to second base (the diagonal of the square)?

**Source:** *Little League Baseball, Official Regulations and Playing Rules, 2016*

- 63. Baseball** Refer to Problem 61. Overlay a rectangular coordinate system on a major league baseball diamond so that the origin is at home plate, the positive  $x$ -axis lies in the direction from home plate to first base, and the positive  $y$ -axis lies in the direction from home plate to third base.

- What are the coordinates of first base, second base, and third base? Use feet as the unit of measurement.
- If the right fielder is located at  $(310, 15)$ , how far is it from there to second base?
- If the center fielder is located at  $(300, 300)$ , how far is it from there to third base?

- 64. Little League Baseball** Refer to Problem 62. Overlay a rectangular coordinate system on a Little League baseball diamond so that the origin is at home plate, the positive  $x$ -axis lies in the direction from home plate to first base, and the positive  $y$ -axis lies in the direction from home plate to third base.

- What are the coordinates of first base, second base, and third base? Use feet as the unit of measurement.
- If the right fielder is located at  $(180, 20)$ , how far is it from there to second base?
- If the center fielder is located at  $(220, 220)$ , how far is it from there to third base?

- 65. Distance between Moving Objects** A Ford Focus and a Freightliner truck leave an intersection at the same time. The Focus heads east at an average speed of 30 miles per hour, while the truck heads south at an average speed of 40 miles per hour. Find an expression for their distance apart  $d$  (in miles) at the end of  $t$  hours.

- 66. Distance of a Moving Object from a Fixed Point** A hot-air balloon, headed due east at an average speed of 15 miles per hour and at a constant altitude of 100 feet, passes over an intersection (see the figure). Find an expression for the distance  $d$  (measured in feet) from the balloon to the intersection  $t$  seconds later.

- 67. Drafting Error** When a draftsman draws three lines that are to intersect at one point, the lines may not intersect as intended and subsequently will form an **error triangle**. If this error triangle is long and thin, one estimate for the location of the desired point is the midpoint of the shortest side. The figure in the next column shows one such error triangle.

- Find an estimate for the desired intersection point.
- Find the length of the median for the midpoint found in part (a). See Problem 53.

- 68. Net Sales** The figure illustrates how net sales of Costco Wholesale Corporation grew from 2012 through 2016. Use the midpoint formula to estimate the net sales of Costco Wholesale Corporation in 2014. How does your result compare to the reported value of \$110 billion?

**Source:** *Costco Wholesale Corporation 2016 Annual Report*

- 69. Poverty Threshold** Poverty thresholds are determined by the U.S. Census Bureau. A poverty threshold represents the minimum annual household income for a family not to be considered poor. In 2008, the poverty threshold for a family of four with two children under the age of 18 years was \$21,834. In 2016, the poverty threshold for a family of four with two children under the age of 18 years was \$24,339. Assuming poverty thresholds increase in a straight-line fashion, use the midpoint formula to estimate the poverty threshold of a family of four with two children under the age of 18 in 2012. How does your result compare to the actual poverty threshold in 2012 of \$23,283?

**Source:** *U.S. Census Bureau*

- 70. Horizontal and Vertical Shifts** Suppose that  $A = (2, 5)$  are the coordinates of a point in the  $xy$ -plane.

- Find the coordinates of the point if  $A$  is shifted 3 units to the right and 2 units down.
- Find the coordinates of the point if  $A$  is shifted 2 units to the left and 8 units up.

- 71. Completing a Line Segment** Plot the points  $A = (-1, 8)$  and  $M = (2, 3)$  in the  $xy$ -plane. If  $M$  is the midpoint of a line segment  $AB$ , find the coordinates of  $B$ .

(b) For the point  $(2, -2)$ ,

$$2x - y = 2(2) - (-2) = 4 + 2 = 6$$

The equation is satisfied, so the point  $(2, -2)$  is on the graph.

 **Now Work** PROBLEM 11

**EXAMPLE 2** How to Graph an Equation by Plotting Points

Graph the equation:  $y = -2x + 3$

**Step-by-Step Solution**

**Step 1** Find points  $(x, y)$  that satisfy the equation. To determine these points, choose values of  $x$  and use the equation to find the corresponding values for  $y$ . See Table 1.

**Table 1**

$x$	$y = -2x + 3$	$(x, y)$
-2	$-2(-2) + 3 = 7$	$(-2, 7)$
-1	$-2(-1) + 3 = 5$	$(-1, 5)$
0	$-2(0) + 3 = 3$	$(0, 3)$
1	$-2(1) + 3 = 1$	$(1, 1)$
2	$-2(2) + 3 = -1$	$(2, -1)$

**Step 2** Plot the points found in the table as shown in Figure 11(a). Now connect the points to obtain the graph of the equation (a *line*), as shown in Figure 11(b).

**Figure 11**  $y = -2x + 3$

**EXAMPLE 3** Graphing an Equation by Plotting Points

Graph the equation:  $y = x^2$

**Solution** Table 2 provides several points on the graph. Plotting these points and connecting them with a smooth curve gives the graph (a *parabola*) shown in Figure 12.

**Table 2**

$x$	$y = x^2$	$(x, y)$
-4	16	$(-4, 16)$
-3	9	$(-3, 9)$
-2	4	$(-2, 4)$
-1	1	$(-1, 1)$
0	0	$(0, 0)$
1	1	$(1, 1)$
2	4	$(2, 4)$
3	9	$(3, 9)$
4	16	$(4, 16)$

**Figure 12**  $y = x^2$

The graphs of the equations shown in Figures 11 and 12 do not show all the points that are on the graph. For example, in Figure 11 the point  $(20, -37)$  is a part of the graph of  $y = -2x + 3$ , but it is not shown. Since the graph of  $y = -2x + 3$  could be extended out indefinitely, we use arrows to indicate that the pattern shown continues. It is important when illustrating a graph to present enough of the graph so that any viewer of the illustration will “see” the rest of it as an obvious continuation of what is actually there. This is referred to as a **complete graph**.

One way to obtain a complete graph of an equation is to plot a sufficient number of points on the graph for a pattern to become evident. Then these points are connected with a smooth curve following the suggested pattern. But how many points are sufficient? Sometimes knowledge about the equation tells us. For example, we will learn in the next section that if an equation is of the form  $y = mx + b$ , then its graph is a line. In this case, only two points are needed to obtain the graph.

One purpose of this text is to investigate the properties of equations in order to decide whether a graph is complete. Sometimes we shall graph equations by plotting points. Shortly, we shall investigate various techniques that will enable us to graph an equation without plotting so many points.

**COMMENT** Another way to obtain the graph of an equation is to use a graphing utility. Read Section B.2, *Using a Graphing Utility to Graph Equations*, in Appendix B.

Figure 13

Two techniques that sometimes reduce the number of points required to graph an equation involve finding *intercepts* and checking for *symmetry*.

## 2 Find Intercepts from a Graph

The points, if any, at which a graph crosses or touches the coordinate axes are called the **intercepts**. See Figure 13. The  $x$ -coordinate of a point at which the graph crosses or touches the  $x$ -axis is an  **$x$ -intercept**, and the  $y$ -coordinate of a point at which the graph crosses or touches the  $y$ -axis is a  **$y$ -intercept**. For a graph to be complete, all its intercepts must be displayed.

### EXAMPLE 4

#### Finding Intercepts from a Graph

Find the intercepts of the graph in Figure 14. What are its  $x$ -intercepts? What are its  $y$ -intercepts?

**Solution**

The intercepts of the graph are the points

$$(-3, 0), (0, 3), \left(\frac{3}{2}, 0\right), \left(0, -\frac{4}{3}\right), (0, -3.5), (4.5, 0)$$

The  $x$ -intercepts are  $-3$ ,  $\frac{3}{2}$ , and  $4.5$ ; the  $y$ -intercepts are  $-3.5$ ,  $-\frac{4}{3}$ , and  $3$ .

Figure 14

In Example 4, note the following usage: If the type of intercept ( $x$ - versus  $y$ -) is not specified, then report the intercept as an ordered pair. However, if the type of intercept is specified, then report only the coordinate of the specified intercept. For  $x$ -intercepts, report the  $x$ -coordinate of the intercept; for  $y$ -intercepts, report the  $y$ -coordinate of the intercept.

### 3 Find Intercepts from an Equation

The intercepts of a graph can be found from its equation by using the fact that points on the  $x$ -axis have  $y$ -coordinates equal to 0 and points on the  $y$ -axis have  $x$ -coordinates equal to 0.

#### Procedure for Finding Intercepts

1. To find the  $x$ -intercept(s), if any, of the graph of an equation, let  $y = 0$  in the equation and solve for  $x$ .
2. To find the  $y$ -intercept(s), if any, of the graph of an equation, let  $x = 0$  in the equation and solve for  $y$ .

Because the  $x$ -intercepts of the graph of an equation are those  $x$ -values for which  $y = 0$ , they are also called the **zeros** (or **roots**) of the equation.

#### EXAMPLE 5

#### Finding Intercepts from an Equation

Find the  $x$ -intercept(s) and the  $y$ -intercept(s) of the graph of  $y = x^2 - 4$ .

#### Solution

To find the  $x$ -intercept(s), let  $y = 0$  and obtain the equation

$$x^2 - 4 = 0$$

$$(x + 2)(x - 2) = 0 \quad \text{Factor.}$$

$$x + 2 = 0 \quad \text{or} \quad x - 2 = 0 \quad \text{Zero-Product Property}$$

$$x = -2 \quad \text{or} \quad x = 2 \quad \text{Solve.}$$

The equation has two solutions,  $-2$  and  $2$ . The  $x$ -intercepts (the zeros) are  $-2$  and  $2$ .

To find the  $y$ -intercept(s), let  $x = 0$  in the equation.

$$y = x^2 - 4$$

$$= 0^2 - 4$$

$$= -4$$

The  $y$ -intercept is  $-4$ .

#### NOW WORK PROBLEM 21

**COMMENT** For many equations, finding intercepts may not be so easy. In such cases, a graphing utility can be used. Read the first part of Section B.3, *Using a Graphing Utility to Locate Intercepts and Check for Symmetry*, in Appendix B to find out how a graphing utility locates intercepts.

### 4 Test an Equation for Symmetry

Another helpful tool for graphing equations by hand involves *symmetry*, particularly symmetry with respect to the  $x$ -axis, the  $y$ -axis, and the origin.

Symmetry often occurs in nature. Consider the picture of the butterfly. Do you see the symmetry?

#### DEFINITION

A graph is said to be **symmetric with respect to the  $x$ -axis** if, for every point  $(x, y)$  on the graph, the point  $(x, -y)$  is also on the graph.

A graph is said to be **symmetric with respect to the  $y$ -axis** if, for every point  $(x, y)$  on the graph, the point  $(-x, y)$  is also on the graph.

A graph is said to be **symmetric with respect to the origin** if, for every point  $(x, y)$  on the graph, the point  $(-x, -y)$  is also on the graph.

Figure 15 illustrates the definition. Note that when a graph is symmetric with respect to the  $x$ -axis, the part of the graph above the  $x$ -axis is a reflection or mirror image of the part below it, and vice versa. When a graph is symmetric with respect to the  $y$ -axis, the part of the graph to the right of the  $y$ -axis is a reflection of the part to the left of it, and vice versa. Symmetry with respect to the origin may be viewed in two ways:

1. As a reflection about the  $y$ -axis, followed by a reflection about the  $x$ -axis
2. As a projection along a line through the origin so that the distances from the origin are equal

Figure 15

### EXAMPLE 6

#### Symmetric Points

- (a) If a graph is symmetric with respect to the  $x$ -axis, and the point  $(4, 2)$  is on the graph, then the point  $(4, -2)$  is also on the graph.
- (b) If a graph is symmetric with respect to the  $y$ -axis, and the point  $(4, 2)$  is on the graph, then the point  $(-4, 2)$  is also on the graph.
- (c) If a graph is symmetric with respect to the origin, and the point  $(4, 2)$  is on the graph, then the point  $(-4, -2)$  is also on the graph.

#### NOW WORK PROBLEM 29

When the graph of an equation is symmetric with respect to the  $x$ -axis, the  $y$ -axis, or the origin, the number of required points to plot in order to see the pattern is reduced. For example, if the graph of an equation is symmetric with respect to the  $y$ -axis, then once points to the right of the  $y$ -axis are plotted, an equal number of points on the graph can be obtained by reflecting them about the  $y$ -axis. Because of this, before graphing an equation, it is wise to determine whether any symmetry exists. The following tests are used for this purpose.

#### Tests for Symmetry

To test the graph of an equation for symmetry with respect to the

**x-AXIS** Replace  $y$  by  $-y$  in the equation. If an equivalent equation results, the graph of the equation is symmetric with respect to the  $x$ -axis.

**y-AXIS** Replace  $x$  by  $-x$  in the equation. If an equivalent equation results, the graph of the equation is symmetric with respect to the  $y$ -axis.

**ORIGIN** Replace  $x$  by  $-x$  and  $y$  by  $-y$  in the equation. If an equivalent equation results, the graph of the equation is symmetric with respect to the origin.

**EXAMPLE 7****Testing an Equation for Symmetry**

Test  $y = \frac{4x^2}{x^2 + 1}$  for symmetry.

**Solution**

**x-Axis:** To test for symmetry with respect to the  $x$ -axis, replace  $y$  by  $-y$ . Since  $-y = \frac{4x^2}{x^2 + 1}$  is not equivalent to  $y = \frac{4x^2}{x^2 + 1}$ , the graph of the equation is not symmetric with respect to the  $x$ -axis.

**y-Axis:** To test for symmetry with respect to the  $y$ -axis, replace  $x$  by  $-x$ . Since  $y = \frac{4(-x)^2}{(-x)^2 + 1} = \frac{4x^2}{x^2 + 1}$  is equivalent to  $y = \frac{4x^2}{x^2 + 1}$ , the graph of the equation is symmetric with respect to the  $y$ -axis.

**Origin:** To test for symmetry with respect to the origin, replace  $x$  by  $-x$  and  $y$  by  $-y$ .

$$-y = \frac{4(-x)^2}{(-x)^2 + 1} \quad \text{Replace } x \text{ by } -x \text{ and } y \text{ by } -y.$$

$$-y = \frac{4x^2}{x^2 + 1} \quad \text{Simplify.}$$

$$y = -\frac{4x^2}{x^2 + 1} \quad \text{Multiply both sides by } -1.$$

Since the result is not equivalent to the original equation, the graph of the equation  $y = \frac{4x^2}{x^2 + 1}$  is not symmetric with respect to the origin. ●

Figure 16  $y = \frac{4x^2}{x^2 + 1}$

**Seeing the Concept**

Figure 16 shows the graph of  $y = \frac{4x^2}{x^2 + 1}$  using a TI-84 Plus C graphing calculator. Do you see the symmetry with respect to the  $y$ -axis?

**NOW WORK** PROBLEM 59

**5 Know How to Graph Key Equations**

The next three examples use intercepts, symmetry, and point plotting to obtain the graphs of key equations. It is important to know the graphs of these key equations because they will be used later. The first of these is  $y = x^3$ .

**EXAMPLE 8****Graphing the Equation  $y = x^3$  by Finding Intercepts and Checking for Symmetry**

Graph the equation  $y = x^3$  by plotting points. Find any intercepts and check for symmetry first.

**Solution**

First, find the intercepts. When  $x = 0$ , then  $y = 0$ ; and when  $y = 0$ , then  $x = 0$ . The origin  $(0, 0)$  is the only intercept. Now test for symmetry.

**x-Axis:** Replace  $y$  by  $-y$ . Since  $-y = x^3$  is not equivalent to  $y = x^3$ , the graph is not symmetric with respect to the  $x$ -axis.

**y-Axis:** Replace  $x$  by  $-x$ . Since  $y = (-x)^3 = -x^3$  is not equivalent to  $y = x^3$ , the graph is not symmetric with respect to the  $y$ -axis.

**Origin:** Replace  $x$  by  $-x$  and  $y$  by  $-y$ . Since  $-y = (-x)^3 = -x^3$  is equivalent to  $y = x^3$  (multiply both sides by  $-1$ ), the graph is symmetric with respect to the origin.

To graph  $y = x^3$ , use the equation to obtain several points on the graph. Because of the symmetry, we only need to locate points on the graph for which  $x \geq 0$ .

See Table 3. Since  $(1, 1)$  is on the graph, and the graph is symmetric with respect to the origin, the point  $(-1, -1)$  is also on the graph. Figure 17 shows the graph.

Table 3

$x$	$y = x^3$	$(x, y)$
0	0	$(0, 0)$
1	1	$(1, 1)$
2	8	$(2, 8)$
3	27	$(3, 27)$

 Figure 17  $y = x^3$ 

## EXAMPLE 9

 Graphing the Equation  $x = y^2$ 

- (a) Graph the equation  $x = y^2$ . Find any intercepts and check for symmetry first.  
 (b) Graph  $x = y^2$ ,  $y \geq 0$ .

## Solution

- (a) The lone intercept is  $(0, 0)$ . The graph is symmetric with respect to the  $x$ -axis since  $x = (-y)^2$  is equivalent to  $x = y^2$ . The graph is not symmetric with respect to the  $y$ -axis or the origin.

To graph  $x = y^2$ , use the equation to obtain several points on the graph. Because the equation is solved for  $x$ , it is easier to assign values to  $y$  and use the equation to determine the corresponding values of  $x$ . Because of the symmetry, start by finding points whose  $y$ -coordinates are non-negative. Then use the symmetry to find additional points on the graph. See Table 4. For example, since  $(1, 1)$  is on the graph, so is  $(1, -1)$ . Since  $(4, 2)$  is on the graph, so is  $(4, -2)$ , and so on. Plot these points and connect them with a smooth curve to obtain Figure 18.

- (b) If we restrict  $y$  so that  $y \geq 0$ , the equation  $x = y^2$ ,  $y \geq 0$ , may be written equivalently as  $y = \sqrt{x}$ . The portion of the graph of  $x = y^2$  in quadrant I is therefore the graph of  $y = \sqrt{x}$ . See Figure 19.

Table 4

$y$	$x = y^2$	$(x, y)$
0	0	$(0, 0)$
1	1	$(1, 1)$
2	4	$(4, 2)$
3	9	$(9, 3)$

Figure 20 TI-84 Plus C

 Figure 18  $x = y^2$ 

 Figure 19  $y = \sqrt{x}$ 

**COMMENT** To see the graph of the equation  $x = y^2$  on a graphing calculator, graph two equations:  $Y_1 = \sqrt{x}$  and  $Y_2 = -\sqrt{x}$ . See Figure 20. We discuss why in Chapter 1.

## EXAMPLE 10

 Graphing the Equation  $y = \frac{1}{x}$ 

Graph the equation  $y = \frac{1}{x}$ . Find any intercepts and check for symmetry first.

(continued)
