MyLab Math

*Support You **Need**, When You **Need** It*

MyLab Math has helped millions of students succeed in their math courses. Take advantage of the resources it provides.

Interactive Exercises

MyLab Math's interactive exercises mirror those in the textbook but are programmed to allow you unlimited practice, leading to mastery. Most exercises include **learning aids**, such as "Help Me Solve This," "View an Example," and "Video," and they offer helpful feedback when you enter incorrect answers.

Instructional Videos

Instructional videos cover key examples from the text and can conveniently be played on any mobile device. These videos are especially helpful if you miss a class or just need further explanation.

Interactive eText

The **Pearson eText** gives you access to your textbook anytime, anywhere. In addition to note taking, highlighting, and bookmarking, the Pearson eText App offers access even when offline.

This page intentionally left blank

Prepare for Class: "Read the Book"

Feature	Description	Benefit	Page(s)
Every Chapter begins with . . .			
Chapter-Opening Topic & Project	Each chapter begins with a discussion of a topic of current interest and ends with a related project.	In the concluding project, you will apply what you have learned to solve a problem related to the topic.	271, 380
 Internet-Based Projects	These projects allow for the integration of spreadsheet technology that you will need to be a productive member of the workforce.	The projects give you an opportunity to collaborate and use mathematics to deal with issues of current interest.	380
Every Section begins with . . .			
LEARNING OBJECTIVES 	Each section begins with a list of objectives. Individual objectives also appear in the text where they are covered.	These objectives focus your studying by emphasizing what's most important and where to find it.	293
Sections contain . . .			
PREPARING FOR THIS SECTION	Most sections begin with a list of key concepts to review, with page numbers.	Ever forget what you've learned? This feature highlights previously learned material to be used in this section. Review it, and you'll always be prepared to move forward.	293
 Now Work the 'Are You Prepared?' Problems	These problems assess whether you have the prerequisite knowledge for the upcoming section.	Work the 'Are You Prepared?' problems. If you get one wrong, you'll know exactly what you need to review and where to review it!	293, 305
 Now Work PROBLEMS	These follow most examples and direct you to a related exercise.	We learn best by doing. You'll solidify your understanding of examples if you try a similar problem right away, to be sure you understand what you've just read.	301, 307
 CAUTION	Words of caution are provided in the text.	These point out common mistakes and help you avoid them.	329
Explorations and Seeing the Concept	These graphing utility activities foreshadow a concept or reinforce a concept just presented.	You will obtain a deeper and more intuitive understanding of theorems and definitions.	288, 300
In Words	This feature provides alternative descriptions of select definitions and theorems.	Why didn't you say that in the first place? This feature translates math into plain English.	312
 Calculus	This symbol appears next to information essential for the study of calculus.	Foreshadowing calculus now will make the material easier later.	67, 276, 301
SHOWCASE EXAMPLES	These examples provide "how to" instruction by offering a guided, step-by-step approach to solving a problem.	With each step presented on the left and the mathematics displayed on the right, you can immediately see how each step is employed.	205–206
 Model It! Examples and Problems	These examples and problems require you to build a mathematical model from either a verbal description or data. The homework Model It! problems are marked by purple problem numbers.	It is rare for a problem to come in the form "Solve the following equation." Rather, the equation must be developed based on an explanation of the problem. These problems require you to develop models that will enable you to describe the problem mathematically and suggest a solution to the problem.	319, 351
NEW!  Need to Review?	These margin notes provide a just-in-time reminder of a concept needed now, but covered in an earlier section of the book. Each note is back-referenced to the chapter, section and page where the concept was originally discussed.	Sometimes as you read, you encounter a word or concept you know you've seen before, but don't remember exactly what it means. This feature will point you to where you first learned the word or concept. A quick review now will help you see the connection to what you are learning for the first time and make remembering easier the next time.	300

Practice: “Work the Problems”

Feature	Description	Benefit	Page(s)
‘Are You Prepared?’ Problems	These problems assess your retention of the prerequisite material. Answers are given at the end of the section exercises. This feature is related to the Preparing for This Section feature.	Do you always remember what you’ve learned? Working these problems is the best way to find out. If you get one wrong, you’ll know exactly what you need to review and where to review it!	293, 305
Concepts and Vocabulary	These short-answer questions, mainly fill-in-the-blank, multiple-choice, and true/false items, assess your understanding of key definitions and concepts in the current section.	It is difficult to learn math without knowing the language of mathematics. These problems test your understanding of the formulas and vocabulary.	305–306
Skill Building	Correlated with section examples, these problems provide straightforward practice.	These problems give you ample opportunity to dig in and develop your skills.	306–308
Mixed Practice	These problems offer comprehensive assessment of the skills learned in the section by asking problems related to more than one concept or objective. These problems may also require you to utilize skills learned in previous sections.	Learning mathematics is a building process. Many concepts build on each other and are related. These problems help you see how mathematics builds on itself and how the concepts are linked together.	308
Applications and Extensions	These problems allow you to apply your skills to real-world problems. They also enable you to extend concepts learned in the section.	You will see that the material learned within the section has many uses in everyday life.	308–311
NEW! Challenge Problems	These problems have been added in most sections and appear at the end of the Application and Extensions exercises. They are intended to be thought-provoking, requiring some ingenuity to solve.	Challenge problems can be used for group work or to challenge your students. Solutions to Challenge Problems are in the Annotated Instructor’s Edition or in the Instructor’s Solution Manual (online).	311
Explaining Concepts: Discussion and Writing	“Discussion and Writing” problem numbers are colored red. They support class discussion, verbalization of mathematical ideas, and writing and research projects.	To verbalize an idea, or to describe it clearly in writing, shows real understanding. These problems nurture that understanding. Many are challenging, but you’ll get out what you put in.	311
Retain Your Knowledge	These problems allow you to practice content learned earlier in the course.	Remembering how to solve all the different kinds of problems that you encounter throughout the course is difficult. This practice helps you remember previously learned skills.	311
Now Work PROBLEMS	Many examples refer you to a related homework problem. These related problems are marked by  and orange problem numbers.	If you get stuck while working problems, look for the closest Now Work problem, and refer to the related example to see if it helps.	301, 303, 304
NEW! Interactive Figure Exercises	Exercises that require you manipulate an interactive figure to solve. These exercises are labeled with the icon  .	These exercises help you visualize important concepts and develop a “feel” for them. The figures are housed at bit.ly/2Mibga0 and were developed in GeoGebra by author Michael Sullivan III.	305, 306, 320, 321
Review Exercises	Every chapter concludes with a comprehensive list of exercises to practice. Use the list of objectives to determine what objective and examples correspond to each problem.	Work these problems to ensure that you understand all the skills and concepts employed in the chapter. Think of it as a comprehensive review of the chapter. All answers to Chapter Review problems appear in the back of the text.	375–378

Review: “Study for Quizzes and Tests”

Feature	Description	Benefit	Page(s)
Most Sections Contain			
Retain Your Knowledge	Keeps what you have learned at the forefront and see how topics are connected.	These problems allow content to remain fresh so you are more prepared for the final exam.	325
The Chapter Review at the end of each chapter contains . . .			
Things to Know	A detailed list of important theorems, formulas, and definitions from the chapter.	Review these and you’ll know the most important material in the chapter!	373–374
You Should Be Able to . . .	A complete list of objectives by section, examples that illustrate the objective, and practice exercises that test your understanding of the objective.	Do the recommended exercises and you’ll have mastered the key material. If you get something wrong, go back and review the example listed, and try again.	374–375
Review Exercises	These provide comprehensive review and practice of key skills, matched to the Learning Objectives for each section.	Practice makes perfect. These problems combine exercises from all sections, giving you a comprehensive review in one place.	375–378
Chapter Test	About 15–20 problems that can be taken as a Chapter Test. Be sure to take the Chapter Test under test conditions—no notes!	Be prepared. Take the sample practice test under test conditions. This will get you ready for your instructor’s test. If you get a problem wrong, you can watch the Chapter Test Prep Video.	378–379
Cumulative Review	These problem sets appear at the end of each chapter, beginning with Chapter 2. They combine problems from previous chapters, providing an ongoing cumulative review. When you use them in conjunction with the Retain Your Knowledge problems, you will be ready for the final exam.	These problem sets are really important. Completing them will ensure that you are not forgetting anything as you go. This will go a long way toward keeping you primed for the final exam.	379–380

Three Distinct Series	xix
The Enhanced with Graphing Utilities Series	xx
Preface to the Instructor	xxi
Applications Index	xxix
To the Student	xxxiv

1 Graphs 1

1.1 Graphing Utilities; Introduction to Graphing Equations	2
Graph Equations by Plotting Points • Graph Equations Using a Graphing Utility • Use a Graphing Utility to Create Tables • Find Intercepts from a Graph • Use a Graphing Utility to Approximate Intercepts	
1.2 The Distance and Midpoint Formulas	13
Use the Distance Formula • Use the Midpoint Formula	
1.3 Intercepts; Symmetry; Graphing Key Equations	20
Find Intercepts Algebraically from an Equation • Test an Equation for Symmetry with Respect to the x -Axis, the y -Axis, and the Origin • Know How to Graph Key Equations	
1.4 Solving Equations Using a Graphing Utility	28
Solve Equations Using a Graphing Utility	
1.5 Lines	32
Calculate and Interpret the Slope of a Line • Graph Lines Given a Point and the Slope • Find the Equation of a Vertical Line • Use the Point-Slope Form of a Line; Identify Horizontal Lines • Use the Slope-Intercept Form of a Line • Find the Equation of a Line Given Two Points • Graph Lines Written in General Form Using Intercepts • Find Equations of Parallel Lines • Find Equations of Perpendicular Lines	
1.6 Circles	47
Write the Standard Form of the Equation of a Circle • Graph a Circle by Hand and by Using a Graphing Utility • Work with the General Form of the Equation of a Circle	
Chapter Review	55
Chapter Test	57
Chapter Project	58

2 Functions and Their Graphs 59

2.1 Functions	60
Describe a Relation • Determine Whether a Relation Represents a Function • Use Function Notation; Find the Value of a Function • Find the Difference Quotient of a Function • Find the Domain of a Function Defined by an Equation • Form the Sum, Difference, Product, and Quotient of Two Functions	
2.2 The Graph of a Function	76
Identify the Graph of a Function • Obtain Information from or about the Graph of a Function	

2.3 Properties of Functions	86
Identify Even and Odd Functions from a Graph • Identify Even and Odd Functions from an Equation • Use a Graph to Determine Where a Function Is Increasing, Decreasing, or Constant • Use a Graph to Locate Local Maxima and Local Minima • Use a Graph to Locate the Absolute Maximum and the Absolute Minimum • Use a Graphing Utility to Approximate Local Maxima and Local Minima and to Determine Where a Function Is Increasing or Decreasing • Find the Average Rate of Change of a Function	
2.4 Library of Functions; Piecewise-defined Functions	100
Graph the Functions Listed in the Library of Functions • Analyze a Piecewise-defined Function	
2.5 Graphing Techniques: Transformations	112
Graph Functions Using Vertical and Horizontal Shifts • Graph Functions Using Compressions and Stretches • Graph Functions Using Reflections about the x -Axis or y -Axis	
2.6 Mathematical Models: Building Functions	126
Build and Analyze Functions	
Chapter Review	131
Chapter Test	135
Cumulative Review	136
Chapter Projects	136

3 Linear and Quadratic Functions 138

3.1 Properties of Linear Functions and Linear Models	139
Graph Linear Functions • Use Average Rate of Change to Identify Linear Functions • Determine Whether a Linear Function Is Increasing, Decreasing, or Constant • Build Linear Models from Verbal Descriptions	
3.2 Building Linear Models from Data	149
Draw and Interpret Scatter Plots • Distinguish between Linear and Nonlinear Relations • Use a Graphing Utility to Find the Line of Best Fit	
3.3 Quadratic Functions and Their Properties	157
Graph a Quadratic Function Using Transformations • Identify the Vertex and Axis of Symmetry of a Parabola • Graph a Quadratic Function Using Its Vertex, Axis, and Intercepts • Find a Quadratic Function Given Its Vertex and One Other Point • Find the Maximum or Minimum Value of a Quadratic Function	
3.4 Building Quadratic Models from Verbal Descriptions and from Data	171
Build Quadratic Models from Verbal Descriptions • Build Quadratic Models from Data	
3.5 Inequalities Involving Quadratic Functions	179
Solve Inequalities Involving a Quadratic Function	
Chapter Review	183
Chapter Test	185
Cumulative Review	186
Chapter Projects	187

4	Polynomial and Rational Functions	188
4.1	Polynomial Functions	189
	Identify Polynomial Functions and Their Degree • Graph Polynomial Functions Using Transformations • Identify the Real Zeros of a Polynomial Function and Their Multiplicity	
4.2	The Graph of a Polynomial Function; Models	204
	Analyze the Graph of a Polynomial Function • Build Cubic Models from Data	
4.3	The Real Zeros of a Polynomial Function	213
	Use the Remainder and Factor Theorems • Use Descartes' Rule of Signs to Determine the Number of Positive and the Number of Negative Real Zeros of a Polynomial Function • Use the Rational Zeros Theorem to List the Potential Rational Zeros of a Polynomial Function • Find the Real Zeros of a Polynomial Function • Solve Polynomial Equations • Use the Theorem for Bounds on Zeros • Use the Intermediate Value Theorem	
4.4	Complex Zeros; Fundamental Theorem of Algebra	228
	Use the Conjugate Pairs Theorem • Find a Polynomial Function with Specified Zeros • Find the Complex Zeros of a Polynomial Function	
4.5	Properties of Rational Functions	235
	Find the Domain of a Rational Function • Find the Vertical Asymptotes of a Rational Function • Find the Horizontal or Oblique Asymptote of a Rational Function	
4.6	The Graph of a Rational Function	246
	Analyze the Graph of a Rational Function • Solve Applied Problems Involving Rational Functions	
4.7	Polynomial and Rational Inequalities	258
	Solve Polynomial Inequalities Graphically and Algebraically • Solve Rational Inequalities Graphically and Algebraically	
	Chapter Review	265
	Chapter Test	268
	Cumulative Review	268
	Chapter Projects	270
5	Exponential and Logarithmic Functions	271
5.1	Composite Functions	272
	Form a Composite Function • Find the Domain of a Composite Function	
5.2	One-to-One Functions; Inverse Functions	280
	Determine Whether a Function Is One-to-One • Determine the Inverse of a Function Defined by a Mapping or a Set of Ordered Pairs • Obtain the Graph of the Inverse Function from the Graph of a One-to-One Function • Verify that a Function Defined by an Equation Is an Inverse Function • Find the Inverse of a Function Defined by an Equation	
5.3	Exponential Functions	293
	Evaluate Exponential Functions • Graph Exponential Functions • Define the Number e • Solve Exponential Equations	
5.4	Logarithmic Functions	312
	Change Exponential Statements to Logarithmic Statements and Logarithmic Statements to Exponential Statements • Evaluate Logarithmic Expressions • Determine the Domain of a Logarithmic Function • Graph Logarithmic Functions • Solve Logarithmic Equations	

5.5 Properties of Logarithms	326
Work with the Properties of Logarithms • Write a Logarithmic Expression as a Sum or Difference of Logarithms • Write a Logarithmic Expression as a Single Logarithm • Evaluate Logarithms Whose Base Is Neither 10 Nor e • Graph a Logarithmic Function Whose Base is Neither 10 Nor e	
5.6 Logarithmic and Exponential Equations	335
Solve Logarithmic Equations • Solve Exponential Equations • Solve Logarithmic and Exponential Equations Using a Graphing Utility	
5.7 Financial Models	344
Determine the Future Value of a Lump Sum of Money • Calculate Effective Rates of Return • Determine the Present Value of a Lump Sum of Money • Determine the Rate of Interest or the Time Required to Double a Lump Sum of Money	
5.8 Exponential Growth and Decay Models; Newton's Law; Logistic Growth and Decay Models	354
Model Populations That Obey the Law of Uninhibited Growth • Model Populations That Obey the Law of Uninhibited Decay • Use Newton's Law of Cooling • Use Logistic Models	
5.9 Building Exponential, Logarithmic, and Logistic Models from Data	365
Build an Exponential Model from Data • Build a Logarithmic Model from Data • Build a Logistic Model from Data	
Chapter Review	373
Chapter Test	378
Cumulative Review	379
Chapter Projects	380

6

Trigonometric Functions

381

6.1 Angles, Arc Length, and Circular Motion	382
Angles and Degree Measure • Convert between Decimal and Degree, Minute, Second Measures for Angles • Find the Length of an Arc of a Circle • Convert from Degrees to Radians and from Radians to Degrees • Find the Area of a Sector of a Circle • Find the Linear Speed of an Object Traveling in Circular Motion	
6.2 Trigonometric Functions: Unit Circle Approach	395
Find the Exact Values of the Trigonometric Functions Using a Point on the Unit Circle • Find the Exact Values of the Trigonometric Functions of Quadrantal Angles • Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{4} = 45^\circ$ • Find the Exact Values of the Trigonometric Functions of $\frac{\pi}{6} = 30^\circ$ and $\frac{\pi}{3} = 60^\circ$ • Find the Exact Values of the Trigonometric Functions for Integer Multiples of $\frac{\pi}{6} = 30^\circ$, $\frac{\pi}{4} = 45^\circ$, and $\frac{\pi}{3} = 60^\circ$ • Use a Calculator to Approximate the Value of a Trigonometric Function • Use a Circle of Radius r to Evaluate the Trigonometric Functions	
6.3 Properties of the Trigonometric Functions	412
Determine the Domain and the Range of the Trigonometric Functions • Determine the Period of the Trigonometric Functions • Determine the Signs of the Trigonometric Functions in a Given Quadrant • Find the Values of the Trigonometric Functions Using Fundamental Identities • Find the Exact Values of the Trigonometric Functions of an Angle Given One of the Functions and the Quadrant of the Angle • Use Even-Odd Properties to Find the Exact Values of the Trigonometric Functions	

6.4 Graphs of the Sine and Cosine Functions 427

Graph the Sine Function $y = \sin x$ and Functions of the Form $y = A \sin(\omega x)$ • Graph the Cosine Function $y = \cos x$ and Functions of the Form $y = A \cos(\omega x)$ • Determine the Amplitude and Period of Sinusoidal Functions • Graph Sinusoidal Functions Using Key Points • Find an Equation for a Sinusoidal Graph

6.5 Graphs of the Tangent, Cotangent, Cosecant, and Secant Functions 443

Graph the Tangent Function $y = \tan x$ and the Cotangent Function $y = \cot x$ • Graph Functions of the Form $y = A \tan(\omega x) + B$ and $y = A \cot(\omega x) + B$ • Graph the Cosecant Function $y = \csc x$ and the Secant Function $y = \sec x$ • Graph Functions of the Form $y = A \csc(\omega x) + B$ and $y = A \sec(\omega x) + B$

6.6 Phase Shift; Sinusoidal Curve Fitting 451

Graph Sinusoidal Functions of the Form $y = A \sin(\omega x - \phi) + B$ • Build Sinusoidal Models from Data

Chapter Review 462**Chapter Test 468****Cumulative Review 468****Chapter Projects 469****7 Analytic Trigonometry 471****7.1 The Inverse Sine, Cosine, and Tangent Functions 472**

Define the Inverse Sine Function • Find the Value of an Inverse Sine Function • Define the Inverse Cosine Function • Find the Value of an Inverse Cosine Function • Define the Inverse Tangent Function • Find the Value of an Inverse Tangent Function • Use Properties of Inverse Functions to Find Exact Values of Certain Composite Functions • Find the Inverse Function of a Trigonometric Function • Solve Equations Involving Inverse Trigonometric Functions

7.2 The Inverse Trigonometric Functions (Continued) 487

Define the Inverse Secant, Cosecant, and Cotangent Functions • Find the Value of Inverse Secant, Cosecant, and Cotangent Functions • Find the Exact Value of Composite Functions Involving the Inverse Trigonometric Functions • Write a Trigonometric Expression as an Algebraic Expression

7.3 Trigonometric Equations 493

Solve Equations Involving a Single Trigonometric Function • Solve Trigonometric Equations Using a Calculator • Solve Trigonometric Equations Quadratic in Form • Solve Trigonometric Equations Using Fundamental Identities • Solve Trigonometric Equations Using a Graphing Utility

7.4 Trigonometric Identities 503

Use Algebra to Simplify Trigonometric Expressions • Establish Identities

7.5 Sum and Difference Formulas 511

Use Sum and Difference Formulas to Find Exact Values • Use Sum and Difference Formulas to Establish Identities • Use Sum and Difference Formulas Involving Inverse Trigonometric Functions • Solve Trigonometric Equations Linear in Sine and Cosine

7.6 Double-angle and Half-angle Formulas 524

Use Double-angle Formulas to Find Exact Values • Use Double-angle Formulas to Establish Identities • Use Half-angle Formulas to Find Exact Values

7.7 Product-to-Sum and Sum-to-Product Formulas 535

Express Products as Sums • Express Sums as Products

Chapter Review	539
Chapter Test	542
Cumulative Review	543
Chapter Projects	544

8 Applications of Trigonometric Functions 545

8.1 Right Triangle Trigonometry; Applications	546
Find the Value of Trigonometric Functions of Acute Angles Using Right Triangles • Use the Complementary Angle Theorem • Solve Right Triangles • Solve Applied Problems	
8.2 The Law of Sines	559
Solve SAA or ASA Triangles • Solve SSA Triangles • Solve Applied Problems	
8.3 The Law of Cosines	570
Solve SAS Triangles • Solve SSS Triangles • Solve Applied Problems	
8.4 Area of a Triangle	577
Find the Area of SAS Triangles • Find the Area of SSS Triangles	
8.5 Simple Harmonic Motion; Damped Motion; Combining Waves	583
Build a Model for an Object in Simple Harmonic Motion • Analyze Simple Harmonic Motion • Analyze an Object in Damped Motion • Graph the Sum of Two Functions	
Chapter Review	593
Chapter Test	596
Cumulative Review	597
Chapter Projects	597

9 Polar Coordinates; Vectors 599

9.1 Polar Coordinates	600
Plot Points Using Polar Coordinates • Convert from Polar Coordinates to Rectangular Coordinates • Convert from Rectangular Coordinates to Polar Coordinates • Transform Equations between Polar and Rectangular Forms	
9.2 Polar Equations and Graphs	610
Identify and Graph Polar Equations by Converting to Rectangular Equations • Graph Polar Equations Using a Graphing Utility • Test Polar Equations for Symmetry • Graph Polar Equations by Plotting Points	
9.3 The Complex Plane; De Moivre's Theorem	627
Plot Points in the Complex Plane • Convert a Complex Number between Rectangular Form and Polar Form or Exponential Form • Find Products and Quotients of Complex Numbers • Use De Moivre's Theorem • Find Complex Roots	
9.4 Vectors	637
Graph Vectors • Find a Position Vector • Add and Subtract Vectors Algebraically • Find a Scalar Multiple and the Magnitude of a Vector • Find a Unit Vector • Find a Vector from Its Direction and Magnitude • Model with Vectors	
9.5 The Dot Product	651
Find the Dot Product of Two Vectors • Find the Angle between Two Vectors • Determine Whether Two Vectors Are Parallel • Determine Whether Two Vectors Are Orthogonal • Decompose a Vector into Two Orthogonal Vectors • Compute Work	

9.6 Vectors in Space	659
Find the Distance between Two Points in Space • Find Position Vectors in Space • Perform Operations on Vectors • Find the Dot Product • Find the Angle between Two Vectors • Find the Direction Angles of a Vector	
9.7 The Cross Product	669
Find the Cross Product of Two Vectors • Know Algebraic Properties of the Cross Product • Know Geometric Properties of the Cross Product • Find a Vector Orthogonal to Two Given Vectors • Find the Area of a Parallelogram	
Chapter Review	675
Chapter Test	678
Cumulative Review	679
Chapter Projects	679

10 Analytic Geometry 680

10.1 Conics	681
Know the Names of the Conics	
10.2 The Parabola	682
Analyze Parabolas with Vertex at the Origin • Analyze Parabolas with Vertex at (h, k) • Solve Applied Problems Involving Parabolas	
10.3 The Ellipse	692
Analyze Ellipses with Center at the Origin • Analyze Ellipses with Center at (h, k) • Solve Applied Problems Involving Ellipses	
10.4 The Hyperbola	705
Analyze Hyperbolas with Center at the Origin • Find the Asymptotes of a Hyperbola • Analyze Hyperbolas with Center at (h, k) • Solve Applied Problems Involving Hyperbolas	
10.5 Rotation of Axes; General Form of a Conic	720
Identify a Conic • Use a Rotation of Axes to Transform Equations • Analyze an Equation Using a Rotation of Axes • Identify Conics without Rotating the Axes	
10.6 Polar Equations of Conics	728
Analyze and Graph Polar Equations of Conics • Convert the Polar Equation of a Conic to a Rectangular Equation	
10.7 Plane Curves and Parametric Equations	735
Graph Parametric Equations by Hand • Graph Parametric Equations Using a Graphing Utility • Find a Rectangular Equation for a Plane Curve Defined Parametrically • Use Time as a Parameter in Parametric Equations • Find Parametric Equations for Plane Curves Defined by Rectangular Equations	
Chapter Review	749
Chapter Test	752
Cumulative Review	752
Chapter Projects	753

11 Systems of Equations and Inequalities 754

11.1 Systems of Linear Equations: Substitution and Elimination	755
Solve Systems of Equations by Substitution • Solve Systems of Equations by Elimination • Identify Inconsistent Systems of Equations Containing Two Variables • Express the Solution of a System of Dependent Equations Containing Two Variables • Solve Systems of Three Equations Containing Three Variables • Identify Inconsistent Systems of Equations Containing Three Variables • Express the Solution of a System of Dependent Equations Containing Three Variables	

11.2 Systems of Linear Equations: Matrices	769
Write the Augmented Matrix of a System of Linear Equations • Write the System of Equations from the Augmented Matrix • Perform Row Operations on a Matrix • Solve a System of Linear Equations Using Matrices	
11.3 Systems of Linear Equations: Determinants	784
Evaluate 2 by 2 Determinants • Use Cramer's Rule to Solve a System of Two Equations Containing Two Variables • Evaluate 3 by 3 Determinants • Use Cramer's Rule to Solve a System of Three Equations Containing Three Variables • Know Properties of Determinants	
11.4 Matrix Algebra	795
Find the Sum and Difference of Two Matrices • Find Scalar Multiples of a Matrix • Find the Product of Two Matrices • Find the Inverse of a Matrix • Solve a System of Linear Equations Using an Inverse Matrix	
11.5 Partial Fraction Decomposition	812
Decompose $\frac{P}{Q}$ where Q Has Only Nonrepeated Linear Factors	
• Decompose $\frac{P}{Q}$ where Q Has Repeated Linear Factors • Decompose $\frac{P}{Q}$ where Q Has a Nonrepeated Irreducible Quadratic Factor • Decompose $\frac{P}{Q}$ where Q Has a Repeated Irreducible Quadratic Factor	
11.6 Systems of Nonlinear Equations	821
Solve a System of Nonlinear Equations Using Substitution • Solve a System of Nonlinear Equations Using Elimination	
11.7 Systems of Inequalities	831
Graph an Inequality by Hand • Graph an Inequality Using a Graphing Utility • Graph a System of Inequalities	
11.8 Linear Programming	840
Set Up a Linear Programming Problem • Solve a Linear Programming Problem	
Chapter Review	847
Chapter Test	851
Cumulative Review	852
Chapter Projects	853

12 Sequences; Induction; the Binomial Theorem 854

12.1 Sequences	855
List the First Several Terms of a Sequence • List the Terms of a Sequence Defined by a Recursive Formula • Use Summation Notation • Find the Sum of a Sequence Algebraically and Using a Graphing Utility • Solve Annuity and Amortization Problems Using Recursive Formulas	
12.2 Arithmetic Sequences	869
Determine Whether a Sequence Is Arithmetic • Find a Formula for an Arithmetic Sequence • Find the Sum of an Arithmetic Sequence	
12.3 Geometric Sequences; Geometric Series	875
Determine Whether a Sequence Is Geometric • Find a Formula for a Geometric Sequence • Find the Sum of a Geometric Sequence • Determine Whether a Geometric Series Converges or Diverges • Solve Annuity Problems Using Formulas	
12.4 Mathematical Induction	887
Prove Statements Using Mathematical Induction	

12.5 The Binomial Theorem	891
Evaluate $\binom{n}{j}$ • Use the Binomial Theorem	
Chapter Review	898
Chapter Test	900
Cumulative Review	901
Chapter Projects	902

13 Counting and Probability 903

13.1 Counting	904
Find All the Subsets of a Set • Count the Number of Elements in a Set • Solve Counting Problems Using the Multiplication Principle	
13.2 Permutations and Combinations	909
Solve Counting Problems Using Permutations Involving n Distinct Objects • Solve Counting Problems Using Combinations • Solve Counting Problems Using Permutations Involving n Nondistinct Objects	
13.3 Probability	918
Construct Probability Models • Compute Probabilities of Equally Likely Outcomes • Find Probabilities of the Union of Two Events • Use the Complement Rule to Find Probabilities	
Chapter Review	928
Chapter Test	930
Cumulative Review	931
Chapter Projects	931

14 A Preview of Calculus: The Limit, Derivative, and Integral of a Function 933

14.1 Investigating Limits Using Tables and Graphs	934
Investigate a Limit Using a Table • Investigate a Limit Using a Graph	
14.2 Algebraic Techniques for Finding Limits	939
Find the Limit of a Sum, a Difference, and a Product • Find the Limit of a Polynomial • Find the Limit of a Power or a Root • Find the Limit of a Quotient • Find the Limit of an Average Rate of Change	
14.3 One-sided Limits; Continuity	946
Find the One-sided Limits of a Function • Determine Whether a Function Is Continuous at a Number	
14.4 The Tangent Problem; The Derivative	953
Find an Equation of the Tangent Line to the Graph of a Function • Find the Derivative of a Function • Find Instantaneous Rates of Change • Find the Instantaneous Velocity of an Object	
14.5 The Area Problem; The Integral	961
Approximate the Area under the Graph of a Function • Approximate Integrals Using a Graphing Utility	
Chapter Review	967
Chapter Test	971
Chapter Projects	972

Appendix A

ReviewA1

A.1 Algebra Essentials	A1
Work with Sets • Graph Inequalities • Find Distance on the Real Number Line • Evaluate Algebraic Expressions • Determine the Domain of a Variable • Use the Laws of Exponents • Evaluate Square Roots • Use a Calculator to Evaluate Exponents	
A.2 Geometry Essentials	A14
Use the Pythagorean Theorem and Its Converse • Know Geometry Formulas • Understand Congruent Triangles and Similar Triangles	
A.3 Polynomials	A22
Recognize Monomials • Recognize Polynomials • Know Formulas for Special Products • Divide Polynomials Using Long Division • Factor Polynomials • Complete the Square	
A.4 Synthetic Division	A31
Divide Polynomials Using Synthetic Division	
A.5 Rational Expressions	A35
Reduce a Rational Expression to Lowest Terms • Multiply and Divide Rational Expressions • Add and Subtract Rational Expressions • Use the Least Common Multiple Method • Simplify Complex Rational Expressions	
A.6 Solving Equations	A44
Solve Linear Equations • Solve Rational Equations • Solve Quadratic Equations by Factoring • Solve Quadratic Equations Using the Square Root Method • Solve Quadratic Equations by Completing the Square • Solve Quadratic Equations Using the Quadratic Formula • Solve Equations Quadratic in Form • Solve Absolute Value Equations • Solve Equations by Factoring	
A.7 Complex Numbers; Quadratic Equations in the Complex Number System	A58
Add, Subtract, Multiply, and Divide Complex Numbers • Solve Quadratic Equations in the Complex Number System	
A.8 Problem Solving: Interest, Mixture, Uniform Motion, Constant Rate Job Applications	A66
Translate Verbal Descriptions into Mathematical Expressions • Solve Interest Problems • Solve Mixture Problems • Solve Uniform Motion Problems • Solve Constant Rate Job Problems	
A.9 Interval Notation; Solving Inequalities	A76
Use Interval Notation • Use Properties of Inequalities • Solve Inequalities • Solve Combined Inequalities • Solve Inequalities Involving Absolute Value	
A.10 <i>n</i>th Roots; Rational Exponents	A87
Work with <i>n</i> th Roots • Simplify Radicals • Rationalize Denominators and Numerators • Solve Radical Equations • Simplify Expressions with Rational Exponents	

Appendix B

The Limit of a Sequence; Infinite SeriesB1

Answers	AN1

Subject Index	I1

Three Distinct Series to Meet Varied Instructional Needs

Students have different goals, learning styles, and levels of preparation. Instructors have different teaching philosophies, styles, and techniques. Rather than write one series to fit all, the Sullivans have written three distinct series. All share the same goal—to develop a high level of mathematical understanding and an appreciation for the way mathematics can describe the world around us. The manner of reaching that goal, however, differs from series to series.

Enhanced with Graphing Utilities Series

This series provides a thorough integration of graphing utilities into topics, allowing students to explore mathematical concepts and encounter ideas usually studied in later courses. Many examples show solutions using algebra side-by-side with graphing techniques. Using technology, the approach to solving certain problems differs from the Contemporary (Flagship) or Concepts through Functions Series, while the emphasis on understanding concepts and building strong skills is maintained. Texts in this series are *College Algebra*, *Algebra & Trigonometry*, and *Precalculus*.

Flagship Series

The Flagship Series is the most traditional in approach, yet modern in its treatment of precalculus mathematics. In each text, needed review material is included and is referenced when it is used. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor. Texts in this series are *College Algebra*, *Algebra & Trigonometry*, *Trigonometry: A Unit Circle Approach*, and *Precalculus*.

Concepts through Functions Series

This series differs from the others, utilizing a functions approach that serves as the organizing principle tying concepts together. Functions are introduced early in various formats. This approach supports the Rule of Four, which states that functions are represented symbolically, numerically, graphically, and verbally. Each chapter introduces a new type of function and then develops all concepts pertaining to that particular function. The solutions of equations and inequalities, instead of being developed as stand-alone topics, are developed in the context of the underlying functions. Graphing utility coverage is optional and can be included or excluded at the discretion of the instructor. Texts in this series are *College Algebra*; *Precalculus, with a Unit Circle Approach to Trigonometry*; *Precalculus, with a Right Triangle Approach to Trigonometry*.

The Enhanced with Graphing Utilities Series

College Algebra, Eighth Edition

This text provides an approach to college algebra that completely integrates graphing technology without sacrificing mathematical analysis and conceptualization. The text has three chapters of review material preceding the chapter on functions. Graphing calculator usage is integrated throughout. After completing this text, a student will be prepared for trigonometry, finite mathematics, and business calculus.

Algebra & Trigonometry, Eighth Edition

This text contains all the material in *College Algebra*, but it also develops the trigonometric functions using a right triangle approach and shows how that approach is related to the unit circle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Vectors in the plane, including the dot product, sequences, induction, and the binomial theorem are also presented. After completing this text, a student will be prepared for finite mathematics, business calculus, and engineering calculus.

Precalculus, Eighth Edition

This text contains a review chapter before covering the traditional precalculus topics of functions and their graphs, polynomial and rational functions, and exponential and logarithmic functions. The trigonometric functions are introduced using a unit circle approach and show how it is related to the right triangle approach. Graphing techniques are emphasized, including a thorough discussion of polar coordinates, parametric equations, and conics using polar coordinates. Vectors in the plane and in space, including the dot and cross products, sequences, induction, and the binomial theorem are also presented. Graphing calculator usage is integrated throughout. The final chapter provides an introduction to calculus, with a discussion of the limit, the derivative, and the integral of a function. After completing this text, a student will be prepared for finite mathematics, business calculus, and engineering calculus.

Preface to the Instructor

As professors at an urban university (Michael Sullivan) and a community college (Michael Sullivan III), we are aware of the varied needs of students in this course. Such students range from those who have little mathematical background and are fearful of mathematics courses to those with a strong mathematical education and a high level of motivation. For some of your students, this will be their last course in mathematics, whereas others will further their mathematical education. We have written this text with both groups in mind.

As a teacher, and as an author of precalculus, engineering calculus, finite mathematics, and business calculus texts, Michael Sullivan understands what students must know if they are to be focused and successful in upper-level math courses. As an instructor and an author of a developmental mathematics series, Michael's son and co-author, Michael Sullivan III, understands the trepidations and skills that students bring to the Precalculus course. As the father of current college students, Michael III realizes that today's college students demand a variety of media to support their education. This text addresses that demand by providing technology and video support that enhances understanding without sacrificing math skills. Together, we have taken great pains to ensure that the text offers solid, student-friendly examples and problems, as well as a clear and seamless writing style.

A tremendous benefit of authoring a successful series is the broad-based feedback we receive from teachers and students. We are sincerely grateful for their support. Virtually every change in this edition is the result of their thoughtful comments and suggestions. We are confident that, building on the success of the first seven editions and incorporating many of these suggestions, we have made *Precalculus Enhanced with Graphing Utilities*, 8th Edition, an even better tool for learning and teaching. We continue to encourage you to share with us your experiences teaching from this text.

Features in the Eighth Edition

A descriptive list of the many special features of *Precalculus* can be found in the front of this text. This list places the features in their proper context as building blocks of an overall learning system that has been carefully crafted over the years to help students get the most out of the time they put into studying. Please take the time to review this and to discuss it with your students at the beginning of your course. Our experience is that when students utilize these features, they are more successful in the course.

New to the Eighth Edition

New Within the Textbook

All of the exercises and examples in the text have been reviewed and analyzed, and we have incorporated feedback from users of the text. All time-sensitive problems have been updated to the most recent information available. Here are the new features of this edition:

- **Challenge Problems** – These problems appear in the Applications and Extensions part of the section exercises and are designed to challenge students. Full solutions are in the back of the Annotated Instructor's Edition and in the Instructor's Solution Manual.
- **“Need to Review?” feature** – We placed reminders in the margin for key review topics. The reminders point students to the location of the review material in the textbook.
- **Chapter Projects** – The projects have been enhanced to give students an up-to-the-minute experience. Many of these projects require the student to research information online in order to solve problems.
- **Interactive Figure Exercises** – We have added this new category of exercises that require students to manipulate an interactive figure to solve. The interactive figures may be found at bit.ly/2Mibga0 or in the Video and Resource Library of MyLab Math, and were created by author Michael Sullivan III in GeoGebra. These exercises are labeled with the icon .
- **Expanded! Retain Your Knowledge Problems** – These problems, which were new to the previous edition, are based on learning research, including a study of precalculus students at University of Louisville entitled “Spaced retrieval practice increases college students’ short- and long-term retention of mathematics knowledge” (Hopkins et al, 2016). The Retain Your Knowledge problems were so well received that we have expanded them in this edition. Moreover, while the focus remains to help students maintain their skills, in most sections, problems were chosen that preview skills required to succeed in subsequent sections or in calculus (). All answers to Retain Your Knowledge problems are given in the back of the text and these problems are available in the prebuilt assignments in the Assignment Manager in MyLab Math.
- **Key to Exercise Types** – To help you navigate the features of the exercise sets, we've included a key at the bottom of the first page of each section's exercises.

- **Graphing Utility Screen Captures** – In several instances we have added Desmos screen captures along with the TI-84 Plus CE screen captures. These updated screen captures provide alternative ways of visualizing concepts and making connections between equations, data, and graphs in full color.

Content Changes

Chapter 1

- Section 1.1 has been reorganized to only include an introduction to graphing and graphing utilities.
- NEW Section 1.2 The Distance and Midpoint Formulas
- NEW Section 1.3 Example 5 Testing an Equation for Symmetry

Chapter 2

- NEW Section 2.1 Objective 1 Describe a Relation
 - NEW Example 1 Describing a Relation demonstrates using the Rule of Four to express a relation numerically, as a mapping, and graphically given a verbal description.
- NEW Section 2.2 Example 4 Energy Expended

Chapter 3

- Section 3.3 now introduces the concept of concavity for a quadratic function.
- NEW Section 3.3 Example 3 Graphing a Quadratic Function Using Its Vertex, Axis, and Intercepts
- Section 3.3 Example 8 Analyzing the Motion of a Projectile (formerly in Section 3.4)
- NEW Section 3.4 Example 4 Fitting a Quadratic Function to Data

Chapter 4

- Previous Section 4.1 has been revised and split into two sections:
 - 4.1 Polynomial Functions
 - 4.2 Graphing Polynomial Functions; Models
- NEW Section 4.2 Example 2 Graphing a Polynomial Function (a 4th degree polynomial function)

Chapter 5

- NEW Section 5.2 Objective Verify a Function Defined by an Equation is an Inverse Function

Chapter 6

- NEW Section 6.1 Example 6 Field Width of a Digital Lens Reflex Camera Lens
- Sections 6.4 and 6.5 were reorganized for increased clarity. Two new objectives were added to Section 6.5.

Chapter 7

- Sections 7.1 and 7.2 were reorganized for increased clarity. Four new objectives were added to Section 7.1. The objectives in Section 7.2 were reordered.

Chapter 9

- Section 9.3 DeMoivre's Theorem was rewritten to support the exponential form of a complex number.
 - Euler's Formula is introduced to express a complex number in exponential form. The exponential form is used to compute products and quotients.
 - DeMoivre's Theorem is expressed using the exponential form of a complex number. The exponential form is used to find complex roots.

Chapter 11

- NEW Section 11.5 Example 1 Identifying Proper and Improper Rational Expressions

Chapter 12

- NEW Section 12.3 Objective 5 Solving Annuity Problems Using Formulas

Appendix A

- Section A.10 Objective 3 now includes rationalizing the numerator. Problems 69–76 provide practice.

New Within MyLab Math

- **Setup & Solve Exercises** require students to show how they set up a problem as well as the solution, better mirroring what is required of them on tests. We have included both the “traditional” and Setup & Solve versions of exercise within MyLab to provide you with more options for assessing students.
- **Integrated Review** content and assessments help you provide students with the remediation they need, when they need it. Integrated Review consists of:
 - **Skills Check Quizzes** by chapter assess the prerequisite skills students need for that chapter.
 - **Skills Review Homework**, again by chapter, is personalized (based on the results of the Skills Check Quiz) to provide students with help on the prerequisite skills they are lacking. Students receive just the help they need—no more, no less.
 - **Intermediate Algebra eText, Exercises, Videos, and Worksheets**—For students who need more help (or for co-requisite courses), we've included the contents of a streamlined Intermediate Algebra course within this MyLab course. There's no need to go elsewhere for remediation.
- **Interactive Figures** (formerly titled Guided Visualizations) have been expanded to support teaching and learning. The figures (created in GeoGebra by author Michael Sullivan III) illustrate key concepts and allow manipulation. They have been designed to be used in lecture as well as by students independently.
- **Enhanced Sample Assignments** are pre-made section-level assignments that address key concepts within the section and help keep previously learned skills fresh with Retain Your Knowledge questions. They are assignable and editable.

Using the Eighth Edition Effectively with Your Syllabus

To meet the varied needs of diverse syllabi, this text contains more content than is likely to be covered in a Precalculus course. As the chart illustrates, this text has been organized with flexibility of use in mind. Within a given chapter, certain sections are optional (see the details that follow the accompanying figure) and can be omitted without loss of continuity.

Chapter 1 Graphs

A quick coverage of this chapter, which is mainly review material, will enable you to get to Chapter 2, “Functions and Their Graphs,” earlier.

Chapter 2 Functions and Their Graphs

This is perhaps the most important chapter. Section 2.6 is optional.

Chapter 3 Linear and Quadratic Functions

Topic selection depends on your syllabus. Sections 3.2 and 3.4 may be omitted without loss of continuity.

Chapter 4 Polynomial and Rational Functions

Topic selection depends on your syllabus.

Chapter 5 Exponential and Logarithmic Functions

Sections 5.1–5.6 follow in sequence. Sections 5.7, 5.8, and 5.9 are optional.

Chapter 6 Trigonometric Functions

Section 6.6 may be omitted in a brief course.

Chapter 7 Analytic Trigonometry

Sections 7.2 and 7.7 may be omitted in a brief course.

Chapter 8 Applications of Trigonometric Functions

Sections 8.4 and 8.5 may be omitted in a brief course.

Chapter 9 Polar Coordinates; Vectors

Sections 9.1–9.3 and Sections 9.4–9.7 are independent and may be covered separately.

Chapter 10 Analytic Geometry

Sections 10.1–10.4 follow in sequence. Sections 10.5, 10.6, and 10.7 are independent of each other, but each requires Sections 10.1–10.4.

Chapter 11 Systems of Equations and Inequalities

Sections 11.2–11.7 may be covered in any order, but each requires Section 11.1. Section 11.8 requires Section 11.7.

Chapter 12 Sequences; Induction; The Binomial Theorem

There are three independent parts: Sections 12.1–12.3, Section 12.4, and Section 12.5.

Chapter 13 Counting and Probability

The sections follow in sequence.

Chapter 14 A Preview of Calculus: The Limit, Derivative, and Integral of a Function

If time permits, coverage of this chapter will provide your students with a beneficial head start in calculus. The sections follow in sequence.

Appendix A Review

This appendix consists of review material. It may be used as the first part of the course or later as a just-in-time review when the content is required. Specific references to this appendix occur throughout the text to assist in the review process.

Appendix B The Limit of a Sequence; Infinite Series

This section represents a more thorough treatment of sequences and series.

Acknowledgments

Texts are written by authors, but they evolve from idea to final form through the efforts of many people.

Thanks are due to the following people for their assistance and encouragement during the preparation of this edition:

- From Pearson Education: Dawn Murrin, for her substantial support, dedication, and energy; Jeff Weidenaar for his attention to detail, experience, editorial expertise, and genuine interest in this project; Peggy McMahon for directing the always difficult production process; Rose Kernan for handling liaison between the compositor and author; Stacey Sveum and Jordan of Longoria for their creative and enthusiastic marketing this text; Marcia Horton for her continued support and genuine interest; Paul Corey for his leadership and commitment to excellence; and Peggy Lucas and the Pearson sales team for their continued confidence and personal support of our texts.
- Accuracy checkers: Roger Lipsett read the entire manuscript and checked the accuracy of answers. Timothy Britt created the Solutions Manuals and accuracy-checked answers.
- Michael Sullivan III would like to thank his colleagues at Joliet Junior College for their support and feedback.

Finally, we offer our sincere thanks to the dedicated users and reviewers of our texts, whose collective insights form the backbone of each text revision.

The list of those to whom we are indebted continues to grow. If we’ve forgotten anyone, please accept our apology. Thank you to all.

Get the *most* out of MyLab Math

MyLab Math for *Precalculus Enhanced with Graphing Utilities 8e* by Michael Sullivan & Michael Sullivan III (access code required)

MyLab Math is tightly integrated with each author's style, offering a range of author-created resources, so your students have a consistent experience.

Preparedness

Preparedness is one of the biggest challenges in many math courses. Pearson offers a variety of content and course options to support students with just-in-time remediation and key-concept review as needed.

Integrated Review in MyLab Math

Integrated Review can be used in corequisite courses or simply to help students who enter a course without a full understanding of prerequisite skills and concepts. Premade, editable Integrated Review assignments are available to assign in the Assignment Manager.

- Students begin each chapter by completing a Skills Check to pinpoint which topics, if any, they need to review.
- Personalized review homework provides extra support for students who need it on just the topics they didn't master in the preceding Skills Check.
- Additional review materials including videos featuring Michael Sullivan III, worksheets, and Sullivan's *Algebra Review* text, are available.

Get the *most* out of MyLab Math

New! Interactive Figures

Interactive Figures, created in GeoGebra by Michael Sullivan III, bring mathematical concepts to life, helping students visualize the concept through guided exploration and purposeful manipulation. Assignable in MyLab Math with assessment questions to check students' conceptual understanding.

☒	☒	3	Section 3.3 Homework	Section 3.3 Homework

Enhanced Sample Assignments

The Sullivans make course set-up easier by giving instructors a starting point for each section. Enhanced Sample Assignments use a thoughtful mix of Sullivan hallmark practice problems that are geared to maximize students' performance—including Retain Your Knowledge exercises that improve students' recall of concepts learned earlier in the course.

Video Program and Resources

Author in Action Videos are actual classroom lectures by Michael Sullivan III with fully worked-out examples.

- **Video assessment questions** are available to assign in MyLab Math for key videos.
- **Updated!** The corresponding **Guided Lecture Notes** assist students in taking thorough, organized, and understandable notes while watching Author in Action Videos.

EXAMPLE

Finding the Exact Value of a Logarithmic Expression

(a) $\log_3 81 = 4$ (b) $\log_2 \frac{1}{8}$

$y = \log_a x$ means $a^y = x$

(b) $y = \log_2 \frac{1}{8}$

$2^y = \frac{1}{8}$

$2^y = 2^{-3}$

$y = -3$

Speed 03:27 / 04:07

Resources for Success

Instructor Resources

Online resources can be downloaded at **pearson.com/mylab/math** or from **www.pearson.com**.

Annotated Instructor's Edition

ISBN - 0135813859 / 9780135813850

Shorter answers are on the page beside the exercises. Longer answers are in the back of the text.

Instructor's Solution Manual

Includes fully worked solutions to all exercises in the text.

Learning Catalytics Question Library

Questions written by Michael Sullivan III are available to deliver through Learning Catalytics to engage students in your course.

PowerPoint® Lecture Slides

Fully editable slides correlate to the textbook and include alternate classroom examples for every textbook objective.

Mini Lecture Notes

This guide includes additional examples and helpful teaching tips, by section.

TestGen®

TestGen (www.pearsoned.com/testgen) enables instructors to build, edit, print, and administer tests using a computerized bank of questions developed to cover all the objectives of the text.

Online Chapter Projects

Additional projects that give students an opportunity to apply what they learned in the chapter.

Student Resources

Additional resources to enhance student success.

Lecture Video

Author in Action videos are actual classroom lectures with fully worked-out examples presented by Michael Sullivan III. Videos are assignable within MyLab Math.

Chapter Test Prep Videos

Students can watch instructors work through step-by-step solutions to all chapter test exercises from the text.

Student's Solutions Manual

ISBN - 0135974453 / 9780135974452

Provides detailed worked-out solutions to odd-numbered exercises. Available within MyLab Math and in print.

Guided Lecture Notes

ISBN - 0135813697 / 9780135813690

These lecture notes assist students in taking thorough, organized, and understandable notes while watching Author in Action videos. Students actively participate in learning the *how* and *why* of important concepts through explorations and activities. The Guided Lecture Notes are available as PDFs and customizable Word files in MyLab Math. They are also available in print format.

Algebra Review

ISBN: 0131480065 / 9780131480063

Four chapters of Intermediate Algebra review. Perfect for a corequisite course or for individual review. Available in print form; PDFs are also available within MyLab Math.

Applications Index

Acoustics

amplifying sound, 377
loudness of sound, 324, 379
loudspeaker, 591
tuning fork, 591
whispering galleries, 700

Aerodynamics

modeling aircraft motion, 679

Agriculture

farm management, 845–846
farm workers in U.S., 364
field enclosure, 829
grazing area for cow, 582
removing stump, 650

Air travel

bearing of aircraft, 556
cost of transatlantic, 75, 83
distance between two planes,
127–128
frequent flyer miles, 567
holding pattern, 441, 501
intersection point for two planes,
127–128, 748
parking at O'Hare International
Airport, 109
revising a flight plan, 574
speed and direction of aircraft,
645, 648, 649

Archaeology

age of ancient tools, 357
age of fossil, 363
age of tree, 363
date of prehistoric man's death, 377

Architecture

brick staircase, 874, 900
Burj Khalifa building, A15
Flatiron Building, 581
floor design, 872, 900
football stadium seating, 874
mosaic design, 874, 900
Norman window, 176, A20
parabolic arch, 176
racetrack design, 703
special window, 177, 184
stadium construction, 874
vertically circular building, 54
window design, 176–177

Area. *See also* Geometry

of Bermuda Triangle, 581
of building ground, 581
under a curve, 485
of dodecagon, 523
of isosceles triangle, 533
of octagon, 532–533
of sector of circle, 392
of segment of circle, 594

Art

fine decorative pieces, 410

Astronomy

angle of elevation of Sun, 555
distances in, 556
distances of planets from
Sun, 867
Halley's comet, 734
International Space Station
(ISS), 749
parallax, 556
planetary orbits, 700
Earth, 703
elliptical, 703
Jupiter, 703
Mars, 703
Mercury, 734
Neptune, 753
Pluto, 703, 753
radius of Moon, 411

Aviation

fighter jet design, 581
modeling aircraft motion, 679
orbital launches, 766
sonic boom, 719
speed of plane, A76

Biology

alcohol and driving, 319, 324–325
bacterial growth, 355–356
E. coli, 98, 140, 369
blood types, 908
bone length, 184–185
cancer, 309, 370
cricket chirp rate and
temperature, 177–178
healing of wounds, 309, 323
lung volume, 426
maternal age versus Down
syndrome, 155
muscle force, 650
yeast biomass as function of
time, 368–369

Business

advertising, 46, 156, 185
automobile production, 278, 782
blending coffee, A74
checkout lines, 927
clothing store, 930
cookie orders, 850–851
cost
of can, 253–254, 256
of commodity, 278
of manufacturing, 83, 264, 839,
A13, A73
marginal, 169, 184
minimizing, 846–847
of printing textbooks, 209–210
of production, 98, 278, 810, 851

of theater ticket per student, 264
of transporting goods, 110
cost equation, 45

To the Student

As you begin, you may feel anxious about the number of theorems, definitions, procedures, and equations you encounter. You may wonder if you can learn it all in time. Don't worry, your concerns are normal. This text was written with you in mind. If you attend class, work hard, and read and study effectively, you will build the knowledge and skills you need to be successful. Here's how you can use the text to your benefit.

Read Carefully

When you get busy, it's easy to skip reading and go right to the problems. Don't! The text provides a large number of examples and clear explanations to help you break down the mathematics into easy-to-understand steps. Reading will provide you with a clearer understanding, beyond simple memorization. Read before class (not after) so you can ask questions about anything you didn't understand. You'll be amazed at how much more you'll get out of class when you do this.

Use the Features

We use many different methods in the classroom to communicate. Those methods, when incorporated into the text, are called "features." The features serve many purposes, from supplying a timely review of material you learned before (just when you need it), to providing organized review sessions to help you prepare for quizzes and tests. Take advantage of the features and you will master the material.

To make this easier, we've provided a brief guide to getting the most from this book. Refer to the "Prepare for Class," "Practice," and "Review" guidelines on the first three pages of this book. Spend fifteen minutes reviewing the guide and familiarizing yourself with the features by flipping to the page numbers provided. Then, as you read, use them. This is the best way to make the most of your text. In this edition, we've also added a handy key to the labeling of the homework exercises so that you know what the colors and icons mean:

 **Now Work**  **1. Modeling** **1. Writing/Discussion**  **Calculus Preview**  **Interactive Figure**

Please do not hesitate to contact us via Math@Pearson.com with any questions, comments, or suggestions about ways to improve this text. We look forward to hearing from you, and good luck with all of your studies.

Best Wishes!

Michael Sullivan

Michael Sullivan III

How to Value a House

Two things to consider in valuing a home: (1) How does it compare to similar nearby homes that have sold recently? (2) What value do you place on the advertised features and amenities?

The Zestimate[®] home value is a good starting point in figuring out the value of a home. It shows you how the home compares relative to others in the area, but you then need to add in all the other qualities that only someone who has seen the house knows.

Looking at “Comps”

Knowing whether an asking price is fair will be important when you’re ready to make an offer on a house. It will be even more important when your mortgage lender hires an appraiser to determine whether the house is worth the loan you’re after.

Check on Zillow to see recent sales of similar, or comparable, homes in the area. Print them out and keep these “comps.” You’ll be referring to them quite a bit.

Note that “recent sales” usually means within the past six months. A sales price from a year ago probably bears little or no relation to what is going on in your area right now. In fact, some lenders will not accept comps older than three months.

Market activity also determines how easy or difficult it is to find accurate comps. In a “hot” or busy market, you’re likely to have lots of comps to choose from. In a less active market finding reasonable comps becomes harder. And if the home you’re looking at has special design features, finding a comparable property is harder still. It’s also necessary to know what’s going on in a given sub-segment. Maybe large, high-end homes are selling like hotcakes, but owners of smaller houses are staying put, or vice versa.

← A Look Back

Appendix A reviews algebra essentials, geometry essentials, and equations in one variable.

A Look Ahead →

Here we connect algebra and geometry using the rectangular coordinate system. In the 1600s, algebra had developed sufficiently so that René Descartes (1596–1650) and Pierre de Fermat (1601–1665) were able to use rectangular coordinates to translate geometry problems into algebra problems, and vice versa. This enabled both geometers and algebraists to gain new insights into their subjects, which had been thought to be separate but now were seen as connected.

1.1 Graphing Utilities; Introduction to Graphing Equations

PREPARING FOR THIS SECTION Before getting started, review the following:

- Algebra Essentials (Section A.1, pp. A1–A10)

 **Now Work** the 'Are You Prepared?' problems on page 10.

- OBJECTIVES**
- 1 Graph Equations by Plotting Points (p. 4)
 - 2 Graph Equations Using a Graphing Utility (p. 6)
 - 3 Use a Graphing Utility to Create Tables (p. 8)
 - 4 Find Intercepts from a Graph (p. 9)
 - 5 Use a Graphing Utility to Approximate Intercepts (p. 9)

Rectangular Coordinates

We locate a point on the real number line by assigning it a single real number, called the *coordinate of the point*. For work in a two-dimensional plane, we locate points by using two numbers.

Begin with two real number lines located in the same plane: one horizontal and the other vertical. The horizontal line is called the ***x*-axis**, the vertical line the ***y*-axis**, and the point of intersection the **origin *O***. See Figure 1. Assign coordinates to every point on these number lines using a convenient scale. In mathematics, we usually use the same scale on each axis, but in applications, different scales appropriate to the application may be used.

The origin *O* has a value of 0 on both the *x*-axis and the *y*-axis. Points on the *x*-axis to the right of *O* are associated with positive real numbers, and those to the left of *O* are associated with negative real numbers. Points on the *y*-axis above *O* are associated with positive real numbers, and those below *O* are associated with negative real numbers. In Figure 1, the *x*-axis and *y*-axis are labeled as *x* and *y*, respectively, and an arrow at the end of each axis is used to denote the positive direction.

The coordinate system described here is called a **rectangular** or **Cartesian*** **coordinate system**. The *x*-axis and *y*-axis lie in a *plane* called the ***xy*-plane**, and the *x*-axis and *y*-axis are referred to as the **coordinate axes**.

Any point *P* in the *xy*-plane can be located by using an **ordered pair** (x, y) of real numbers. Let *x* denote the signed distance of *P* from the *y*-axis (*signed* means that if *P* is to the right of the *y*-axis, then $x > 0$, and if *P* is to the left of the *y*-axis, then $x < 0$); and let *y* denote the signed distance of *P* from the *x*-axis. The ordered pair (x, y) , also called the **coordinates** of *P*, gives us enough information to locate the point *P* in the plane.

For example, to locate the point whose coordinates are $(-3, 1)$, go 3 units along the *x*-axis to the left of *O* and then go straight up 1 unit. We **plot** this point by placing a dot at this location. See Figure 2, in which the points with coordinates $(-3, 1)$, $(-2, -3)$, $(3, -2)$, and $(3, 2)$ are plotted.

The origin has coordinates $(0, 0)$. Any point on the *x*-axis has coordinates of the form $(x, 0)$, and any point on the *y*-axis has coordinates of the form $(0, y)$.

If (x, y) are the coordinates of a point *P*, then *x* is called the ***x*-coordinate**, or **abscissa**, of *P*, and *y* is the ***y*-coordinate**, or **ordinate**, of *P*. We identify the point *P* by its coordinates (x, y) by writing $P = (x, y)$. Usually, we will simply say “the point (x, y) ” rather than “the point whose coordinates are (x, y) .”

The coordinate axes partition the *xy*-plane into four sections called **quadrants**, as shown in Figure 3. In quadrant I, both the *x*-coordinate and the *y*-coordinate of all points are positive; in quadrant II, *x* is negative and *y* is positive; in quadrant III, both *x* and *y* are negative; and in quadrant IV, *x* is positive and *y* is negative. Points on the coordinate axes belong to no quadrant.

 **Now Work PROBLEM 7**

Figure 1 *xy*-Plane

Figure 2

Figure 3

*Named after René Descartes (1596–1650), a French mathematician, philosopher, and theologian.

Graphing Utilities

All graphing utilities (that is, all graphing calculators and all computer software graphing packages) graph equations by plotting points on a screen. The screen itself actually consists of small rectangles called **pixels**. The more pixels the screen has, the better the resolution. Most newer graphing calculators have at least 100 pixels per inch; most newer smartphones have at least 300 pixels per inch. When a point to be plotted lies inside a pixel, the pixel is turned on (lights up). The graph of an equation is a collection of pixels. Figure 4(a) shows how the graph of $y = 2x$ looks on a TI-84 Plus CE graphing calculator, and Figure 4(b) shows the same graph using Desmos.

(a) $y = 2x$ on a TI-84 Plus CE

(b) $y = 2x$ using Desmos

Figure 4

The screen of a graphing utility displays the coordinate axes of a rectangular coordinate system. However, the scale must be set on each axis. The smallest and largest values of x and y to be included in the graph must also be set. This is called **setting the viewing rectangle** or **viewing window**. Figure 5 shows a typical viewing window on a TI-84 Plus CE.

To set the viewing window, values must be given to the following expressions:

- $X_{\min}$: the smallest value of x
- $X_{\max}$: the largest value of x
- X_{scl} : the number of units per tick mark on the x -axis
- $Y_{\min}$: the smallest value of y
- $Y_{\max}$: the largest value of y
- Y_{scl} : the number of units per tick mark on the y -axis

Figure 6 illustrates these settings and their relation to the Cartesian coordinate system.

Figure 5 Viewing window on a TI-84 Plus CE

Figure 6

If the scale used on each axis is known, the minimum and maximum values of x and y shown on the screen can be determined by counting the tick marks. Look again at Figure 5. For a scale of 1 on each axis, the minimum and maximum values of x are -10 and 10 , respectively; the minimum and maximum values of y are also -10 and 10 . If the scale is 2 on each axis, then the minimum and maximum values of x are -20 and 20 , respectively; and the minimum and maximum values of y are -20 and 20 , respectively.

Conversely, if the minimum and maximum values of x and y are known, the scales can be determined by counting the tick marks displayed. This text follows the practice of showing the minimum and maximum values of x and y in illustrations so that the reader will know how the viewing window was set. See Figure 7. The numbers outside of the viewing window stand for

$$X_{\min} = -3, \quad X_{\max} = 3, \quad X_{\text{scl}} = 1$$

$$Y_{\min} = -4, \quad Y_{\max} = 4, \quad Y_{\text{scl}} = 2$$

Figure 7

1 Graph Equations by Plotting Points

An **equation in two variables**, say x and y , is a statement in which two expressions involving x and y are equal. The expressions are called the **sides** of the equation. Since an equation is a statement, it may be true or false, depending on the values of the variables. Any values of x and y that result in a true statement are said to **satisfy** the equation.

For example, the following are all equations in two variables x and y :

$$x^2 + y^2 = 5 \quad 2x - y = 6 \quad y = 2x + 5 \quad x^2 = y$$

The first of these, $x^2 + y^2 = 5$, is satisfied for $x = 1, y = 2$, since $1^2 + 2^2 = 5$. Other choices of x and y , such as $x = -1, y = -2$, also satisfy this equation. It is not satisfied for $x = 2$ and $y = 3$, since $2^2 + 3^2 = 4 + 9 = 13 \neq 5$.

The **graph of an equation in two variables** x and y consists of the set of points in the xy -plane whose coordinates (x, y) satisfy the equation.

Graphs play an important role in helping us to visualize the relationships that exist between two variables or quantities. Figure 8 shows the relation between the level of risk in a stock portfolio and the average annual rate of return. The graph shows that, when 30% of a portfolio of stocks is invested in foreign companies, risk is minimized.

Figure 8

EXAMPLE 1

Determining Whether a Point Is on the Graph of an Equation

Determine whether each of the following points is on the graph of the equation $2x - y = 6$.

(a) $(2, 3)$

(b) $(2, -2)$

Solution

(a) For the point $(2, 3)$, check to see whether $x = 2, y = 3$ satisfies the equation $2x - y = 6$.

$$2x - y = 2 \cdot 2 - 3 = 4 - 3 = 1 \neq 6$$

The equation is not satisfied, so the point $(2, 3)$ is not on the graph of $2x - y = 6$.

(b) For the point $(2, -2)$,

$$2x - y = 2 \cdot 2 - (-2) = 4 + 2 = 6$$

The equation is satisfied, so the point $(2, -2)$ is on the graph of $2x - y = 6$. ■

EXAMPLE 2**How to Graph an Equation by Plotting Points**Graph the equation: $y = -2x + 3$ **Step-by-Step Solution**

Step 1: Find some points (x, y) that satisfy the equation. To find these points, choose values of x and use the equation to find the corresponding values for y . See Table 1.

Table 1

x	$y = -2x + 3$	(x, y)
-2	$-2 \cdot (-2) + 3 = 7$	$(-2, 7)$
-1	$-2 \cdot (-1) + 3 = 5$	$(-1, 5)$
0	$-2 \cdot 0 + 3 = 3$	$(0, 3)$
1	$-2 \cdot 1 + 3 = 1$	$(1, 1)$
2	$-2 \cdot 2 + 3 = -1$	$(2, -1)$

Step 2: Plot the points listed in the table as shown in Figure 9(a). Now connect the points to obtain the graph of the equation (a line), as shown in Figure 9(b).

**Figure 9** $y = -2x + 3$ **EXAMPLE 3****Graphing an Equation by Plotting Points**Graph the equation: $y = x^2$ **Solution**

Table 2 provides several points on the graph. Plotting these points and connecting them with a smooth curve gives the graph (a *parabola*) shown in Figure 10.

Table 2

x	$y = x^2$	(x, y)
-4	16	$(-4, 16)$
-3	9	$(-3, 9)$
-2	4	$(-2, 4)$
-1	1	$(-1, 1)$
0	0	$(0, 0)$
1	1	$(1, 1)$
2	4	$(2, 4)$
3	9	$(3, 9)$
4	16	$(4, 16)$

**Figure 10** $y = x^2$

The graphs of the equations shown in Figures 9(b) and 10 do not show all the points that are on the graph. For example, in Figure 9(b), the point $(20, -37)$ is on the graph of $y = -2x + 3$, but it is not shown. Since the graph of $y = -2x + 3$ could be extended out as far as we please, we use arrows to indicate that the pattern shown continues. When constructing a graph, it is important to present enough of the graph so that any viewer of the illustration will “see” the rest of it as an obvious continuation of what is shown. This is referred to as a **complete graph**.

One way to obtain a complete graph of an equation is to continue plotting points on the graph until a pattern becomes evident. Then these points are connected with a smooth curve following the suggested pattern. But how many points are sufficient? Sometimes knowledge about the equation tells us. For example, we will learn

in Section 1.5 that if an equation is of the form $y = mx + b$, then its graph is a line. In this case, only two points are needed to obtain the complete graph.

One purpose of this text is to investigate the properties of equations in order to decide whether a graph is complete. Sometimes we shall graph equations by plotting points on the graph until a pattern becomes evident and then connect these points with a smooth curve, following the suggested pattern. (Shortly, we shall investigate various techniques that will enable us to graph an equation without plotting so many points.) Other times we shall graph equations using a graphing utility.

2 Graph Equations Using a Graphing Utility

From Examples 2 and 3, we see that a graph can be obtained by plotting points in a rectangular coordinate system and connecting them. Graphing utilities perform these same steps when graphing an equation. For example, the TI-84 Plus CE determines 265 evenly spaced input values (starting at $X_{\min}$ and ending at $X_{\max}$),* uses the equation to determine the output values, plots these points on the screen, and finally (if in the connected mode) draws a line between consecutive points.

To graph an equation in two variables x and y using a graphing utility often requires that the equation be written in the form $y = \{\text{expression in } x\}$. If the original equation is not in this form, rewrite it using equivalent equations until the form $y = \{\text{expression in } x\}$ is obtained.

Procedures That Result in Equivalent Equations

- Interchange the two sides of the equation:

$$3x + 5 = y \text{ is equivalent to } y = 3x + 5$$

- Simplify the sides of the equation by combining like terms, eliminating parentheses, and so on:

$$2y + 2 + 6 = 2x + 5(x + 1) \text{ is equivalent to } 2y + 8 = 7x + 5$$

- Add or subtract the same expression on both sides of the equation:

$$y + 3x - 5 = 4 \text{ is equivalent to } y + 3x - 5 + 5 = 4 + 5$$

- Multiply or divide both sides of the equation by the same nonzero expression:

$$3y = 6 - 2x \text{ is equivalent to } \frac{1}{3} \cdot 3y = \frac{1}{3}(6 - 2x)$$

EXAMPLE 4

Expressing an Equation in the Form $y = \{\text{expression in } x\}$

Solve for y : $2y + 3x - 5 = 4$

Solution

Replace the original equation by a succession of equivalent equations.

$$2y + 3x - 5 = 4$$

$$2y + 3x - 5 + 5 = 4 + 5 \quad \text{Add 5 to both sides.}$$

$$2y + 3x = 9 \quad \text{Simplify.}$$

$$2y + 3x - 3x = 9 - 3x \quad \text{Subtract } 3x \text{ from both sides.}$$

$$2y = 9 - 3x \quad \text{Simplify.}$$

$$\frac{2y}{2} = \frac{9 - 3x}{2} \quad \text{Divide both sides by 2.}$$

$$y = \frac{9 - 3x}{2} \quad \text{Simplify.}$$

CAUTION Be careful when entering the expression $\frac{9 - 3x}{2}$. Use a fraction template $\frac{\square}{\square}$ or use parentheses as follows:

$$(9 - 3x)/2.$$

*These input values depend on the values of $X_{\min}$ and $X_{\max}$. For example, if $X_{\min} = -10$ and $X_{\max} = 10$, then the first input value will be -10 and the next input value will be $-10 + (10 - (-10))/264 = -9.9242$, and so on.

We are now ready to graph equations using a graphing utility.

EXAMPLE 5

How to Graph an Equation Using a Graphing Utility

Use a graphing utility to graph the equation: $6x^2 + 3y = 36$

Step-by-Step Solution

Step 1: Solve the equation for y in terms of x .

$$6x^2 + 3y = 36$$

$$3y = -6x^2 + 36 \quad \text{Subtract } 6x^2 \text{ from both sides.}$$

$$y = -2x^2 + 12 \quad \text{Divide both sides by 3 and simplify.}$$

Step 2: Enter the equation to be graphed into your graphing utility. Figure 11 shows the equation to be graphed entered on a TI-84 Plus CE.

Figure 11

Step 3: Choose an initial viewing window. Without any knowledge about the behavior of the graph, it is common to choose the standard viewing window as the initial viewing window. The standard viewing window is

$$\begin{aligned} X_{\min} &= -10 & Y_{\min} &= -10 \\ X_{\max} &= 10 & Y_{\max} &= 10 \\ X_{\text{scl}} &= 1 & Y_{\text{scl}} &= 1 \end{aligned}$$

See Figure 12.

Figure 12 Standard viewing window

Step 4: Graph the equation. See Figure 13.

Figure 13 $Y_1 = -2x^2 + 12$

Step 5: Adjust the viewing window until a complete graph is obtained.

NOTE: Some graphing utilities have a ZOOM-STANDARD feature that automatically sets the viewing window to the standard viewing window. In addition, some graphing utilities have a ZOOM-FIT feature that determines the appropriate $Y_{\min}$ and $Y_{\max}$ for a given $X_{\min}$ and $X_{\max}$. Consult your user's manual for the appropriate keystrokes. ■

The graph of $y = -2x^2 + 12$ is not complete. The value of $Y_{\max}$ must be increased so that the top portion of the graph is visible. After increasing the value of $Y_{\max}$ to 12, we obtain the graph in Figure 14. The graph is now complete.

Figure 14 $Y_1 = -2x^2 + 12$

Look again at Figure 14 on the previous page. Although a complete graph is shown, the graph might be improved by adjusting the values of X_{min} and X_{max} . Figure 15 shows the graph of $y = -2x^2 + 12$ using $X_{min} = -4$ and $X_{max} = 4$.

Some graphing utilities do not require the equation be written in the form “ $y = \{\text{expression in } x\}$.” Figure 16 shows the graph of $6x^2 + 3y = 36$ using Desmos.

Figure 15 $Y_1 = -2x^2 + 12$

Figure 16 $6x^2 + 3y = 36$

3 Use a Graphing Utility to Create Tables

In addition to graphing equations, graphing utilities can also be used to create a table of values that satisfy the equation. This feature is especially useful in determining an appropriate viewing window when graphing an equation.

EXAMPLE 6

How to Create a Table Using a Graphing Utility

Step-by-Step Solution

Step 1: Solve the equation for y in terms of x .

Create a table that displays the points on the graph of $6x^2 + 3y = 36$ for $x = -3, -2, -1, 0, 1, 2$, and 3 .

We solved the equation for y in terms of x in Example 5 and obtained $y = -2x^2 + 12$.

Step 2: Enter the expression in x following the “ $Y =$ ” prompt of the graphing utility.

See Figure 11 on the previous page.

Step 3: Set up the table. Graphing utilities typically have two modes for creating tables. In the AUTO mode, the user determines a starting point for the table ($TblStart$) and ΔTbl (pronounced “delta table”). The ΔTbl feature determines the increment for x in the table. The ASK mode requires the user to enter values of x , and then the utility determines the corresponding value of y .

Create a table using AUTO mode. The table we wish to create starts at -3 , so $TblStart = -3$. The increment for x is 1 , so $\Delta Tbl = 1$. See Figure 17.

Figure 17 Table setup

Step 4: Create the table. See Table 3.

Table 3

NORMAL FLOAT AUTO REAL RADIAN MP				
PRESS ENTER TO EDIT				
X	Y1			
-3	-6			
-2	4			
-1	10			
0	12			
1	10			
2	4			
3	-6			
4	-20			
5	-38			
6	-60			
7	-86			
Y1 = -2X^2 + 12				

In AUTO mode, the user can scroll forward or backward within the table to find additional values.

In looking at Table 3 on the previous page, notice that $y = 12$ when $x = 0$. This information could have been used to help create the initial viewing window by letting us know that $Y_{\max}$ needs to be at least 12 in order to get a complete graph.

4 Find Intercepts from a Graph

The points, if any, at which a graph crosses or touches the coordinate axes are called the **intercepts**. See Figure 18. The x -coordinate of a point at which the graph crosses or touches the x -axis is an **x -intercept**, and the y -coordinate of a point at which the graph crosses or touches the y -axis is a **y -intercept**. For a graph to be complete, all its intercepts must be displayed.

Figure 18 Intercepts

EXAMPLE 7

Finding Intercepts from a Graph

Find the intercepts of the graph in Figure 19. What are its x -intercepts? What are its y -intercepts?

The intercepts of the graph are the points

$$(-3, 0), (0, 3), \left(\frac{3}{2}, 0\right), \left(0, -\frac{4}{3}\right), (0, -3.5), (4.5, 0)$$

The x -intercepts are -3 , $\frac{3}{2}$, and 4.5 ; the y -intercepts are -3.5 , $-\frac{4}{3}$, and 3 .

Figure 19

In Words

Intercepts are points (ordered pairs). An x -intercept or a y -intercept is a number. For example, the point $(3, 0)$ is an intercept; the number 3 is an x -intercept.

In Example 7 notice the following usage: If the type of intercept is not specified (x - versus y -), then report the intercept as an ordered pair. However, if the type of intercept is specified, then report the coordinate of the specified intercept. For x -intercepts, report the x -coordinate of the intercept; for y -intercepts, report the y -coordinate of the intercept.

Now Work PROBLEM 37

5 Use a Graphing Utility to Approximate Intercepts

We can use a graphing utility to approximate the intercepts of the graph of an equation.

EXAMPLE 8

Approximating Intercepts Using a Graphing Utility

Use a graphing utility to approximate the intercepts of the equation $y = x^3 - 16$.

Solution

On the next page, Figure 20(a) shows the graph of $y = x^3 - 16$.

The eVALUEate feature of a TI-84 Plus CE graphing calculator accepts as input a value for x and determines the value of y . If we let $x = 0$, the y -intercept is found to be -16 . See Figure 20(b) on the next page. (continued)

(a)

(b)

(c)

Figure 20

The ZERO feature of a TI-84 Plus CE is used to find the x -intercept(s). See Figure 20(c). Rounded to two decimal places, the x -intercept is 2.52.

Figure 21 $y = x^3 - 8$

Now Work PROBLEM 55

Some graphing utilities automatically identify key points such as intercepts and intersection points. For example, Figure 21 shows the graph of $y = x^3 - 8$ using Desmos where the intercepts are already identified.

To find the intercepts algebraically requires the ability to solve equations, the subject of the following four sections.

1.1 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

- On a real number line the origin is assigned the number _____. (p. A4)
- On a real number line, graph all numbers x for which $x < 5$. (pp. A4–A5)

Concepts and Vocabulary

- If (x, y) are the coordinates of a point P in the xy -plane, then x is called the _____ of P and y is the _____ of P . The coordinate axes divide the xy -plane into four sections called _____.
- Multiple Choice** Given that the intercepts of a graph are $(-4, 0)$ and $(0, 5)$, choose the statement that is true.
 - The y -intercept is -4 and the x -intercept is 5 .
 - The y -intercepts are -4 and 5 .
 - The x -intercepts are -4 and 5 .
 - The x -intercept is -4 and the y -intercept is 5 .
- True or False** The point $(-1, 4)$ lies in quadrant IV of the Cartesian plane.
- Multiple Choice** Which of the following points does not satisfy the equation $2x^2 - 5y = 20$?
 - $(0, -4)$
 - $(5, 6)$
 - $(-5, -14)$
 - $(10, 36)$

Skill Building

In Problems 7 and 8, plot each point in the xy -plane. Tell in which quadrant or on what coordinate axis each point lies.

- $A = (-3, 2)$
 - $B = (6, 0)$
 - $C = (-2, -2)$
 - $D = (6, 5)$
 - $E = (0, -3)$
 - $F = (6, -3)$
- $A = (1, 4)$
 - $B = (-3, -4)$
 - $C = (-3, 4)$
 - $D = (4, 1)$
 - $E = (0, 1)$
 - $F = (-3, 0)$

- Plot the points $(2, 0)$, $(2, -3)$, $(2, 4)$, $(2, 1)$, and $(2, -1)$. Describe the set of all points of the form $(2, y)$, where y is a real number.
- Plot the points $(0, 3)$, $(1, 3)$, $(-2, 3)$, $(5, 3)$, and $(-4, 3)$. Describe the set of all points of the form $(x, 3)$, where x is a real number.

In Problems 11–14, determine the coordinates of the points shown. Tell in which quadrant each point lies. Assume the coordinates are integers.

In Problems 15–20, select a setting so that each given point will lie within the viewing window.

15. $(-10, 5)$, $(3, -2)$, $(4, -1)$

16. $(5, 0)$, $(6, 8)$, $(-2, -3)$

17. $(40, 20)$, $(-20, -80)$, $(10, 40)$

18. $(-80, 60)$, $(20, -30)$, $(-20, -40)$

19. $(0, 0)$, $(100, 5)$, $(5, 150)$

20. $(0, -1)$, $(100, 50)$, $(-10, 30)$

In Problems 21–26, determine the viewing window used.

In Problems 27–32, tell whether the given points are on the graph of the equation.

27. Equation: $y = x^4 - \sqrt{x}$
Points: $(0, 0)$; $(1, 1)$; $(-1, 0)$

28. Equation: $y = x^3 - 2\sqrt{x}$
Points: $(0, 0)$; $(1, 1)$; $(1, -1)$

29. Equation: $y^2 = x^2 + 9$
Points: $(0, 3)$; $(3, 0)$; $(-3, 0)$

30. Equation: $y^3 = x + 1$
Points: $(1, 2)$; $(0, 1)$; $(-1, 0)$

31. Equation: $x^2 + y^2 = 4$
Points: $(0, 2)$; $(-2, 2)$; $(\sqrt{2}, \sqrt{2})$

32. Equation: $x^2 + 4y^2 = 4$
Points: $(0, 1)$; $(2, 0)$; $(2, \frac{1}{2})$

In Problems 33–40, the graph of an equation is given. List the intercepts of the graph.

In Problems 41–52, graph each equation by plotting points. Verify your results using a graphing utility.

41. $y = x + 2$ 42. $y = x - 6$ 43. $y = 2x + 8$ 44. $y = 3x - 9$ 45. $y = x^2 - 1$ 46. $y = x^2 - 9$
 47. $y = -x^2 + 4$ 48. $y = -x^2 + 1$ 49. $2x + 3y = 6$ 50. $5x + 2y = 10$ 51. $9x^2 + 4y = 36$ 52. $4x^2 + y = 4$

In Problems 53–60, graph each equation using a graphing utility. Use a graphing utility to approximate the intercepts rounded to two decimal places. Use the TABLE feature to help to establish the viewing window.

53. $y = 2x - 13$ 54. $y = -3x + 14$ 55. $y = 2x^2 - 15$ 56. $y = -3x^2 + 19$
 57. $3x - 2y = 43$ 58. $4x + 5y = 82$ 59. $5x^2 + 3y = 37$ 60. $2x^2 - 3y = 35$

61. If the point $(2, 5)$ is shifted 3 units right and 2 units down, what are its new coordinates?

62. If the point $(-1, 6)$ is shifted 2 units left and 4 units up, what are its new coordinates?

Applications and Extensions

63. Shot-put Throw The graph below shows the height y , in feet, of a shot (metal ball) thrown by a shot-putter after it has traveled x feet horizontally.

- (a) What is the height of the shot after it has traveled 10 feet horizontally?
 (b) How far has the shot traveled when its height is at a maximum? What is the maximum height?
 (c) Identify and interpret the intercepts.
- 64. Discus Throw** The graph below shows the height h , in meters, of a discus t seconds after it is thrown.

- (a) What is the height of the discus after 6 seconds?

(b) When does the discus reach its maximum height? What is the maximum height?

(c) Identify and interpret the intercepts.

65. Movie Membership A movie theater offers a monthly membership for avid movie lovers. The graph below shows the relation between the monthly cost C and the number of movies seen m .

- (a) What is the cost of watching 5 movies in a month? 10 movies?
 (b) What is the cost of watching 25 movies in a month?
 (c) Identify and interpret the intercept.

66. Bicycle Motion Caleb rides home from his friend's house on his bicycle. The graph below shows his distance d from his house after m minutes.

(continued)

- (a) How far was Caleb from home after 10 minutes?
 (b) How far was Caleb from home after 20 minutes?
 (c) Identify and interpret the intercepts.

67. Challenge Problem Use a graphing utility that does not require the equation to be written in the form $y = \{\text{expression in } x\}$ to find the intercepts of the graph of

$$(x^2 + y^2 - 1)^3 - x^2y^3 = 0$$

68. Challenge Problem Use a graphing utility that does not require the equation to be written in the form $y = \{\text{expression in } x\}$ to find the intercepts of the graph of

$$y^2(y^2 - 4) = x^2(x^2 - x - 6)$$

Explaining Concepts: Discussion and Writing

69. Make up an equation satisfied by the ordered pairs $(2, 0)$, $(4, 0)$, and $(0, 1)$. Compare your equation with a friend's equation. Comment on any similarities.

In Problem 70, you may use a graphing utility, but it is not required.

- 70. (a)** Graph $y = \sqrt{x^2}$, $y = x$, $y = |x|$, and $y = (\sqrt{x})^2$, noting which graphs are the same.
(b) Explain why the graphs of $y = \sqrt{x^2}$ and $y = |x|$ are the same.
(c) Explain why the graphs of $y = x$ and $y = (\sqrt{x})^2$ are not the same.
(d) Explain why the graphs of $y = \sqrt{x^2}$ and $y = x$ are not the same.

71. Draw a graph that contains the points $(-2, -1)$, $(0, 1)$, $(1, 3)$, and $(3, 5)$. Compare your graph with those of other students. Are most of the graphs almost straight lines? How many are “curved”? Discuss the various ways that these points might be connected.

72. Explain what is meant by a complete graph.

73. Write a paragraph that describes a Cartesian plane. Then write a second paragraph that describes how to plot points in the Cartesian plane. Your paragraphs should include the terms “coordinate axes,” “ordered pair,” “coordinates,” “plot,” “x-coordinate,” and “y-coordinate.”

'Are You Prepared?' Answers

2. 

1.2 The Distance and Midpoint Formulas

PREPARING FOR THIS SECTION Before getting started, review the following:

- Algebra Essentials (Section A.1, pp. A1–A10)
- Geometry Essentials (Section A.2, pp. A14–A19)
- Rectangular Coordinates (Section 1.1, p. 2)

 **Now Work** the 'Are You Prepared?' problems on page 17.

OBJECTIVES 1 Use the Distance Formula (p. 13)

2 Use the Midpoint Formula (p. 16)

1 Use the Distance Formula

If the same units of measurement (such as inches, centimeters, and so on) are used for both the x -axis and y -axis, then all distances in the xy -plane can be measured using this unit of measurement.

EXAMPLE 1

Finding the Distance between Two Points

Find the distance d between the points $(1, 3)$ and $(5, 6)$.

Solution

First plot the points $(1, 3)$ and $(5, 6)$ and connect them with a line segment. See Figure 22(a) on the next page. To find the length d , begin by drawing a horizontal line segment from $(1, 3)$ to $(5, 3)$ and a vertical line segment from $(5, 3)$ to $(5, 6)$, forming a right triangle, as shown in Figure 22(b) on the next page. One leg of the

(continued)

Need to Review?

- The Pythagorean Theorem and its converse are discussed in
- Section A.2, pp. A14–A15.

triangle is of length 4 (since $|5 - 1| = 4$), and the other is of length 3 (since $|6 - 3| = 3$). By the Pythagorean Theorem, the square of the distance d that we seek is

$$d^2 = 4^2 + 3^2 = 16 + 9 = 25$$

$$d = \sqrt{25} = 5$$

Figure 22

The **distance formula** provides a straightforward method for computing the distance between two points.

THEOREM Distance Formula

The distance between two points $P_1 = (x_1, y_1)$ and $P_2 = (x_2, y_2)$, denoted by $d(P_1, P_2)$, is

$$d(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \quad (1)$$

In Words

To compute the distance between two points, find the difference of the x-coordinates, square it, and add this to the square of the difference of the y-coordinates. The square root of this sum is the distance.

Proof of the Distance Formula Let (x_1, y_1) denote the coordinates of point P_1 and let (x_2, y_2) denote the coordinates of point P_2 .

- Assume that the line joining P_1 and P_2 is neither horizontal nor vertical. Refer to Figure 23(a). The coordinates of P_3 are (x_2, y_1) . The horizontal distance from P_1 to P_3 equals the absolute value of the difference of the x-coordinates, $|x_2 - x_1|$. The vertical distance from P_3 to P_2 equals the absolute value of the difference of the y-coordinates, $|y_2 - y_1|$. See Figure 23(b). The distance $d(P_1, P_2)$ is the length of the hypotenuse of the right triangle, so, by the Pythagorean Theorem, it follows that

$$\begin{aligned} [d(P_1, P_2)]^2 &= |x_2 - x_1|^2 + |y_2 - y_1|^2 \\ &= (x_2 - x_1)^2 + (y_2 - y_1)^2 \\ d(P_1, P_2) &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \end{aligned}$$

Figure 23

- If the line joining P_1 and P_2 is horizontal, then the y-coordinate of P_1 equals the y-coordinate of P_2 ; that is, $y_1 = y_2$. Refer to Figure 24(a) on the next page. In this case, the distance formula (1) still works, because for $y_1 = y_2$, it reduces to

$$d(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + 0^2} = \sqrt{(x_2 - x_1)^2} = |x_2 - x_1|$$

Figure 24

- A similar argument holds if the line joining P_1 and P_2 is vertical. See Figure 24(b). ■

EXAMPLE 2**Finding the Length of a Line Segment**

Find the length of the line segment shown in Figure 25.

Solution

The length of the line segment is the distance between the points $P_1 = (x_1, y_1) = (-4, 5)$ and $P_2 = (x_2, y_2) = (3, 2)$. Using the distance formula (1) with $x_1 = -4, y_1 = 5, x_2 = 3$, and $y_2 = 2$, the length d is

$$\begin{aligned} d &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{[3 - (-4)]^2 + (2 - 5)^2} \\ &= \sqrt{7^2 + (-3)^2} = \sqrt{49 + 9} = \sqrt{58} \quad \text{Exact} \\ &\approx 7.62 \quad \text{Approximate} \end{aligned}$$

Figure 25

 Now Work PROBLEMS 11 AND 15

The distance between two points $P_1 = (x_1, y_1)$ and $P_2 = (x_2, y_2)$ is never a negative number. Also, the distance between two points is 0 only when the points are identical—that is, when $x_1 = x_2$ and $y_1 = y_2$. And, because $(x_2 - x_1)^2 = (x_1 - x_2)^2$ and $(y_2 - y_1)^2 = (y_1 - y_2)^2$, it makes no difference whether the distance is computed from P_1 to P_2 or from P_2 to P_1 ; that is, $d(P_1, P_2) = d(P_2, P_1)$.

Rectangular coordinates enable us to translate geometry problems into algebra problems, and vice versa. The next example shows how algebra (the distance formula) can be used to solve geometry problems.

EXAMPLE 3**Using Algebra to Solve a Geometry Problem**

Consider the three points $A = (-2, 1)$, $B = (2, 3)$, and $C = (3, 1)$.

- Plot each point and form the triangle ABC .
- Find the length of each side of the triangle.
- Show that the triangle is a right triangle.
- Find the area of the triangle.

Solution

- Figure 26 shows the points A, B, C and the triangle ABC .
- To find the length of each side of the triangle, use the distance formula, equation (1).

$$\begin{aligned} d(A, B) &= \sqrt{[2 - (-2)]^2 + (3 - 1)^2} = \sqrt{16 + 4} = \sqrt{20} = 2\sqrt{5} \\ d(B, C) &= \sqrt{(3 - 2)^2 + (1 - 3)^2} = \sqrt{1 + 4} = \sqrt{5} \\ d(A, C) &= \sqrt{[3 - (-2)]^2 + (1 - 1)^2} = \sqrt{25 + 0} = 5 \end{aligned}$$

- If the sum of the squares of the lengths of two of the sides equals the square of the length of the third side, then the triangle is a right triangle. Looking at Figure 26, it seems reasonable to conjecture that the angle at vertex B might be a right angle. We shall check to see whether

$$[d(A, B)]^2 + [d(B, C)]^2 = [d(A, C)]^2$$

(continued)

Figure 26

Using the results in part (b) yields

$$\begin{aligned}[d(A, B)]^2 + [d(B, C)]^2 &= (2\sqrt{5})^2 + (\sqrt{5})^2 \\ &= 20 + 5 = 25 = [d(A, C)]^2\end{aligned}$$

It follows from the converse of the Pythagorean Theorem that triangle ABC is a right triangle.

- (d) Because the right angle is at vertex B , the sides AB and BC form the base and height of the triangle. Its area is

$$\text{Area} = \frac{1}{2} \cdot \text{Base} \cdot \text{Height} = \frac{1}{2} \cdot 2\sqrt{5} \cdot \sqrt{5} = 5 \text{ square units}$$

Now Work PROBLEM 25

2 Use the Midpoint Formula

We now derive a formula for the coordinates of the **midpoint of a line segment**. Let $P_1 = (x_1, y_1)$ and $P_2 = (x_2, y_2)$ be the endpoints of a line segment, and let $M = (x, y)$ be the point on the line segment that is the same distance from P_1 as it is from P_2 . See Figure 27. The triangles P_1AM and MBP_2 are congruent. [Do you see why? $d(P_1, M) = d(M, P_2)$ is given; also, $\angle AP_1M = \angle BMP_2^*$ and $\angle P_1MA = \angle MP_2B$. So, we have angle-side-angle.] Because triangles P_1AM and MBP_2 are congruent, corresponding sides are equal in length. That is,

$$\begin{aligned}x - x_1 &= x_2 - x & \text{and} & & y - y_1 &= y_2 - y \\ 2x &= x_1 + x_2 & & & 2y &= y_1 + y_2 \\ x &= \frac{x_1 + x_2}{2} & & & y &= \frac{y_1 + y_2}{2}\end{aligned}$$

Figure 27

In Words

To find the midpoint of a line segment, average the x -coordinates of the endpoints, and average the y -coordinates of the endpoints.

THEOREM Midpoint Formula

The midpoint $M = (x, y)$ of the line segment from $P_1 = (x_1, y_1)$ to $P_2 = (x_2, y_2)$ is

$$M = (x, y) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right) \quad (2)$$

EXAMPLE 4

Finding the Midpoint of a Line Segment

Find the midpoint of the line segment from $P_1 = (-5, 5)$ to $P_2 = (3, 1)$. Plot the points P_1 and P_2 and their midpoint.

Solution

Use the midpoint formula (2) with $x_1 = -5$, $y_1 = 5$, $x_2 = 3$, and $y_2 = 1$. The coordinates (x, y) of the midpoint M are

$$x = \frac{x_1 + x_2}{2} = \frac{-5 + 3}{2} = -1 \quad \text{and} \quad y = \frac{y_1 + y_2}{2} = \frac{5 + 1}{2} = 3$$

That is, $M = (-1, 3)$. See Figure 28.

Figure 28

Now Work PROBLEM 31

*A postulate from geometry states that the transversal $\overline{P_1P_2}$ forms congruent corresponding angles with the parallel line segments $\overline{P_1A}$ and $\overline{MB}$.

1.2 Assess Your Understanding

'Are You Prepared?' Answers are given at the end of these exercises. If you get a wrong answer, read the pages listed in red.

- If -3 and 5 are the coordinates of two points on the real number line, the distance between these points is _____. (pp. A5–A6)
- If 3 and 4 are the legs of a right triangle, the hypotenuse is _____. (p. A14)
- Use the converse of the Pythagorean Theorem to show that a triangle whose sides are of lengths 11 , 60 , and 61 is a right triangle. (pp. A14–A15)
- In the rectangular coordinate system, the origin has coordinates _____. (p. 2)
- The area A of a triangle whose base is b and whose altitude is h is $A =$ _____. (p. A15)
- True or False** Two triangles are congruent if two angles and the included side of one equals two angles and the included side of the other. (pp. A16–A17)

Concepts and Vocabulary

- If three distinct points P , Q , and R all lie on a line, and if $d(P, Q) = d(Q, R)$, then Q is called the _____ of the line segment from P to R .
- True or False** The distance between two points is sometimes a negative number.
- True or False** The midpoint of a line segment is found by averaging the x -coordinates and averaging the y -coordinates of the endpoints.
- Multiple Choice** Choose the expression that equals the distance between two points (x_1, y_1) and (x_2, y_2) .
 - $\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$
 - $\sqrt{(x_2 + x_1)^2 - (y_2 + y_1)^2}$
 - $\sqrt{(x_2 - x_1)^2 - (y_2 - y_1)^2}$
 - $\sqrt{(x_2 + x_1)^2 + (y_2 + y_1)^2}$

Skill Building

In Problems 11–24, find the distance d between the points P_1 and P_2 .

- $P_1 = (3, -4)$; $P_2 = (5, 4)$
- $P_1 = (-7, 3)$; $P_2 = (4, 0)$
- $P_1 = (5, -2)$; $P_2 = (6, 1)$
- $P_1 = (-0.2, 0.3)$; $P_2 = (2.3, 1.1)$
- $P_1 = (a, b)$; $P_2 = (0, 0)$
- $P_1 = (-1, 0)$; $P_2 = (2, 4)$
- $P_1 = (2, -3)$; $P_2 = (4, 2)$
- $P_1 = (-4, -3)$; $P_2 = (6, 2)$
- $P_1 = (1.2, 2.3)$; $P_2 = (-0.3, 1.1)$
- $P_1 = (a, a)$; $P_2 = (0, 0)$

In Problems 25–30, plot each point and form the triangle ABC . Show that the triangle is a right triangle. Find its area.

- $A = (-2, 5)$; $B = (1, 3)$; $C = (-1, 0)$
- $A = (-5, 3)$; $B = (6, 0)$; $C = (5, 5)$
- $A = (4, -3)$; $B = (0, -3)$; $C = (4, 2)$
- $A = (-2, 5)$; $B = (12, 3)$; $C = (10, -11)$
- $A = (-6, 3)$; $B = (3, -5)$; $C = (-1, 5)$
- $A = (4, -3)$; $B = (4, 1)$; $C = (2, 1)$

In Problems 31–38, find the midpoint of the line segment joining the points P_1 and P_2 .

- $P_1 = (3, -4)$; $P_2 = (5, 4)$
- $P_1 = (-1, 4)$; $P_2 = (8, 0)$
- $P_1 = (7, -5)$; $P_2 = (9, 1)$
- $P_1 = (a, b)$; $P_2 = (0, 0)$
- $P_1 = (-2, 0)$; $P_2 = (2, 4)$
- $P_1 = (2, -3)$; $P_2 = (4, 2)$
- $P_1 = (-4, -3)$; $P_2 = (2, 2)$
- $P_1 = (a, a)$; $P_2 = (0, 0)$
