# About the Authors

## Stephen A. Ross

Stephen A. Ross was the Franco Modigliani Professor of Finance and Economics at the Sloan School of Management, Massachusetts Institute of Technology. One of the most widely published authors in finance and economics, Professor Ross was widely recognized for his work in developing the Arbitrage Pricing Theory and his substantial contributions to the discipline through his research in signaling, agency theory, option pricing, and the theory of the term structure of interest rates, among other topics. A past president of the American Finance Association, he also served as an associate editor of several academic and practitioner journals. He was a trustee of CalTech. He passed away unexpectedly in 2017.

## Randolph W. Westerfield

Marshall School of Business, *University of Southern California*

Randolph W. Westerfield is Dean Emeritus of the University of Southern California's Marshall School of Business and is the Charles B. Thornton Professor of Finance Emeritus. Professor Westerfield came to USC from the Wharton School, University of Pennsylvania, where he was the chairman of the finance department and member of the finance faculty for 20 years. He is a member of the Board of Trustees of Oak Tree Capital Mutual Funds. His areas of expertise include corporate financial policy, investment management, and stock market price behavior.

## Bradford D. Jordan

Warrington College of Business, *University of Florida*

Bradford D. Jordan is Visiting Scholar at the University of Florida. He previously held the duPont Endowed Chair in Banking and Financial Services at the University of Kentucky, where he was department chair for many years. He specializes in corporate finance and securities valuation. He has published numerous articles in leading finance journals, and he has received a variety of research awards, including the Fama/DFA Award in 2010.

Dr. Jordan is coauthor of *Corporate Finance* 13/e, *Corporate Finance: Core Principles and Applications* 6/e, *Fundamentals of Corporate Finance* 13/e, and *Essentials of Corporate Finance* 11/e, which collectively are the most widely used business finance textbooks in the world, along with *Fundamentals of Investments: Valuation and Management* 9/e, a popular investments text.

# From the Authors

When we first wrote *Essentials of Corporate Finance*, we thought there might be a small niche for a briefer book that really focused on what students with widely varying backgrounds and interests needed to carry away from an introductory finance course. We were wrong. There was a huge niche! What we learned is that our text closely matches the needs of instructors and faculty at hundreds of schools across the country. As a result, the growth we have experienced through the first ten editions of *Essentials* has far exceeded anything we thought possible.

With the eleventh edition of *Essentials of Corporate Finance*, we have continued to refine our focus on our target audience, which is the undergraduate student taking a core course in business or corporate finance. This can be a tough course to teach. One reason is that the class is usually required of all business students, so it is not uncommon for a majority of the students to be nonfinance majors. In fact, this may be the only finance course many of them will ever have. With this in mind, our goal in *Essentials* is to convey the most important concepts and principles at a level that is approachable for the widest possible audience.

To achieve our goal, we have worked to distill the subject down to its bare essentials (hence, the name of this book), while retaining a decidedly modern approach to finance. We always have maintained that the subject of corporate finance can be viewed as the workings of a few very powerful intuitions. We also think that understanding the “why” is just as important, if not more so, than understanding the “how”—especially in an introductory course. Based on the gratifying market feedback we have received from our previous editions, as well as from our other text, *Fundamentals of Corporate Finance* (now in its thirteenth edition), many of you agree.

By design, this book is not encyclopedic. As the table of contents indicates, we have a total of 18 chapters. Chapter length is about 30 pages, so the text is aimed squarely at a single-term course, and most of the book can be realistically covered in a typical semester or quarter. Writing a book for a one-term course necessarily means some picking and choosing, with regard to both topics and depth of coverage. Throughout, we strike a balance by introducing and covering the essentials (there’s that word again!) while leaving some more specialized topics to follow-up courses.

The other things we always have stressed, and have continued to improve with this edition, are readability and pedagogy. *Essentials* is written in a relaxed, conversational style that invites the students to join in the learning process rather than being a passive information absorber. We have found that this approach dramatically increases students’ willingness to read and learn on their own. Between larger and larger class sizes and the ever-growing demands on faculty time, we think this is an essential (!) feature for a text in an introductory course.

Throughout the development of this book, we have continued to take a hard look at what is truly relevant and useful. In doing so, we have worked to downplay purely theoretical issues and minimize the use of extensive and elaborate calculations to illustrate points that are either intuitively obvious or of limited practical use.

As a result of this process, three basic themes emerge as our central focus in writing *Essentials of Corporate Finance*:

**An Emphasis on Intuition** We always try to separate and explain the principles at work on a commonsense, intuitive level before launching into any specifics. The underlying ideas are discussed first in very general terms and then by way of examples that illustrate in more concrete terms how a financial manager might proceed in a given situation.

**A Unified Valuation Approach** We treat net present value (NPV) as the basic concept underlying corporate finance. Many texts stop well short of consistently integrating this important principle. The most basic and important notion, that NPV represents the excess of market value over cost, often is lost in an overly mechanical approach that emphasizes computation at the expense of comprehension. In contrast, every subject we cover is firmly rooted in valuation, and care is taken throughout to explain how particular decisions have valuation effects.

**A Managerial Focus** Students shouldn't lose sight of the fact that financial management concerns management. We emphasize the role of the financial manager as decision maker, and we stress the need for managerial input and judgment. We consciously avoid "black box" approaches to finance, and, where appropriate, the approximate, pragmatic nature of financial analysis is made explicit, possible pitfalls are described, and limitations are discussed.

Today, as we prepare once again to enter the market, our goal is to stick with and build on the principles that have brought us this far. However, based on an enormous amount of feedback we have received from you and your colleagues, we have made this edition and its package even more flexible than previous editions. We offer flexibility in coverage and pedagogy by providing a wide variety of features in the book to help students learn about corporate finance. We also provide flexibility in package options by offering the most extensive collection of teaching, learning, and technology aids of any corporate finance text. Whether you use just the textbook, or the book in conjunction with other products, we believe you will find a combination with this edition that will meet your needs.

**Randolph W. Westerfield**

**Bradford D. Jordan**

# Organization of the Text

**W**e designed *Essentials of Corporate Finance* to be as flexible and modular as possible. There are a total of nine parts, and, in broad terms, the instructor is free to decide the particular sequence. Further, within each part, the first chapter generally contains an overview and survey. Thus, when time is limited, subsequent chapters can be omitted. Finally, the sections placed early in each chapter are generally the most important, and later sections frequently can be omitted without loss of continuity. For these reasons, the instructor has great control over the topics covered, the sequence in which they are covered, and the depth of coverage.

Just to get an idea of the breadth of coverage in the eleventh edition of *Essentials*, the following grid presents for each chapter some of the most significant new features, as well as a few selected chapter highlights. Of course, in every chapter, figures, opening vignettes, boxed features, and in-chapter illustrations and examples using real companies have been thoroughly updated as well. In addition, the end-of-chapter material has been completely revised.

Chapters	Selected Topics	Benefits to Users
<b>PART ONE</b>	<b>Overview of Financial Management</b>	
<b>Chapter 1</b>	<p><b>New</b> opener discussing WeWork</p> <p><b>New</b> Finance and other disciplines, including fintech.</p> <p><b>New</b> Discussion of benefit corporation.</p> <p><b>Updated</b> information on executive and celebrity compensation</p> <p><b>Updated Work the Web</b> box on stock quotes</p> <p>Goal of the firm and agency problems</p> <p>Ethics, financial management, and executive compensation</p> <p><b>New</b> proxy fight example involving Elliott Management and Starboard Value with eBay</p> <p><b>New</b> takeover battle discussion involving Eldorado and Caesars Entertainment</p>	<p>A Discusses how finance interacts with other business disciplines. Also includes a discussion of fintech.</p> <p>A discussion of a new type of corporation that has a public benefit at its core.</p> <p>Highlights important developments regarding the very current question of appropriate executive compensation.</p> <p>Stresses value creation as the most fundamental aspect of management and describes agency issues that can arise.</p> <p>Brings in real-world issues concerning conflicts of interest and current controversies surrounding ethical conduct and management pay.</p>
<b>PART TWO</b>	<b>Understanding Financial Statements and Cash Flow</b>	
<b>Chapter 2</b>	<p><b>New</b> opener discussing the Tax Cuts and Jobs Act of 2017</p> <p>Cash flow versus earnings</p> <p>Market values versus book values</p> <p><b>New</b> discussion of corporate taxes in light of the TCJA</p>	<p>Clearly defines cash flow and spells out the differences between cash flow and earnings.</p> <p>Emphasizes the relevance of market values over book values.</p>

Chapters	Selected Topics	Benefits to Users
<b>Chapter 3</b>	<p>Additional explanation of alternative formulas for sustainable and internal growth rates</p> <p><b>New</b> Discussion of PEG ratio, forward PE, and PEs in practice</p> <p><b>Updated</b> examples on Amazon vs. Alibaba</p> <p><b>Updated Work the Web</b> box on financial ratios</p> <p><b>Updated Finance Matters</b> box on financial ratios</p>	<p>Expanded explanation of growth rate formulas clears up a common misunderstanding about these formulas and the circumstances under which alternative formulas are correct.</p> <p>A discussion of using historic or forward earnings in calculating the PE ratio, as well as an introduction to the PEG ratio.</p> <p>Discusses how to find and analyze profitability ratios.</p> <p>Describes how to interpret ratios.</p>
<b>PART THREE Valuation of Future Cash Flows</b>		
<b>Chapter 4</b>	<p>First of two chapters on time value of money</p> <p><b>Updated Finance Matters</b> box on collectibles</p>	<p>Relatively short chapter introduces just the basic ideas on time value of money to get students started on this traditionally difficult topic.</p>
<b>Chapter 5</b>	<p>Second of two chapters on time value of money</p> <p><b>Updated</b> opener on professional athletes' salaries</p> <p><b>Updated Finance Matters</b> box on lotteries</p> <p><b>Updated Finance Matters</b> box on student loans</p>	<p>Covers more advanced time value topics with numerous examples, calculator tips, and Excel spreadsheet exhibits. Contains many real-world examples.</p> <p>Provides a real-world example of why it's important to properly understand how to value costs incurred today versus future cash inflows.</p>
<b>PART FOUR Valuing Stocks and Bonds</b>		
<b>Chapter 6</b>	<p><b>New</b> opener on negative interest on various sovereign bonds</p> <p>Bond valuation</p> <p><b>Updated</b> bond features example using Alphabet issue</p> <p>Interest rates and inflation</p> <p><b>New</b> Examination of corporate default rates by credit rating</p> <p>"Clean" vs. "dirty" bond prices and accrued interest</p> <p><b>Updated</b> Treasury quotes exhibit and discussion</p> <p><b>Updated</b> historic interest rates figure</p> <p>FINRA's TRACE system and transparency in the corporate bond market</p> <p><b>New</b> Added discussion of sukuk.</p>	<p>Discusses the importance of interest rates and how they relate to bonds.</p> <p>Thorough coverage of bond price/yield concepts.</p> <p>Highly intuitive discussion of inflation, the Fisher effect, and the term structure of interest rates.</p> <p>Using information from S&amp;P Global ratings, we discuss the default rates for various credit ratings.</p> <p>Clears up the pricing of bonds between coupon payment dates and also bond market quoting conventions.</p> <p>Up-to-date discussion of new developments in fixed income with regard to price, volume, and transactions reporting.</p> <p>A new discussion of sukuk, debt financing that is consistent with Islamic law.</p>

Chapters	Selected Topics	Benefits to Users
<b>Chapter 7</b>	<p>Stock valuation</p> <p><b>New</b> discussion of EV/EBITDA to value stocks</p> <p><b>Updated Finance Matters</b> box on the OTCBB and the Pink Sheets markets</p>	<p>Thorough coverage of constant and nonconstant growth models.</p> <p>A brief discussion of using EV/EBITDA to value stocks, as well as PE, PS, and EV/EBITDA ratios in practice.</p> <p>Up-to-date description of major stock market operations.</p>
<b>PART FIVE</b>	<b>Capital Budgeting</b>	
<b>Chapter 8</b>	<p><b>New</b> opener on SpaceX's Starlink project</p> <p>First of two chapters on capital budgeting</p> <p>NPV, IRR, MIRR, payback, discounted payback, and accounting rate of return</p>	<p>Discusses the importance of investment opportunities.</p> <p>Relatively short chapter introduces key ideas on an intuitive level to help students with this traditionally difficult topic.</p> <p>Consistent, balanced examination of advantages and disadvantages of various criteria.</p>
<b>Chapter 9</b>	<p>Project cash flow</p> <p><b>New</b> opener on project failures and successes</p> <p><b>New</b> discussion of bonus depreciation</p> <p>Scenario and sensitivity "what-if" analyses</p>	<p>Thorough coverage of project cash flows and the relevant numbers for a project analysis.</p> <p>Shows the importance of properly evaluating net present value.</p> <p>Discussion of how bonus depreciation affects project cash flows.</p> <p>Illustrates how to actually apply and interpret these tools in a project analysis.</p>
<b>PART SIX</b>	<b>Risk and Return</b>	
<b>Chapter 10</b>	<p><b>Updated</b> opener on stock market performance</p> <p>Capital market history</p> <p>Market efficiency</p> <p>Geometric vs. arithmetic returns</p> <p><b>Updated Finance Matters</b> box on professional fund management and performance</p>	<p>Discusses the relationship between risk and return as it relates to personal investing.</p> <p>Extensive coverage of historical returns, volatilities, and risk premiums. <b>New</b> discussion of 2020 COVID-19 market reaction.</p> <p>Efficient markets hypothesis discussed along with common misconceptions.</p> <p>Discusses calculation and interpretation of geometric returns. Clarifies common misconceptions regarding appropriate use of arithmetic vs. geometric average returns.</p>
<b>Chapter 11</b>	<p>Diversification, systematic, and unsystematic risk</p> <p><b>Updated</b> opener on stock price reactions to announcements</p> <p><b>Updated</b> beta coefficients exhibit and associated discussion</p>	<p>Illustrates basics of risk and return in a straightforward fashion.</p> <p>Develops the security market line with an intuitive approach that bypasses much of the usual portfolio theory and statistics.</p>
<b>PART SEVEN</b>	<b>Long-Term Financing</b>	
<b>Chapter 12</b>	<p>Cost of capital estimation</p> <p><b>Updated</b> WACC calculations for Eastman Chemical</p> <p>Geometric vs. arithmetic growth rates</p> <p><b>Updated</b> section on company valuation with the WACC</p>	<p>Intuitive development of the WACC and a complete, web-based illustration of cost of capital for a real company.</p> <p>Both approaches are used in practice. Clears up issues surrounding growth rate estimates.</p> <p>Explores the difference between valuing a project and valuing a company.</p>

Chapters	Selected Topics	Benefits to Users
<b>Chapter 13</b>	Basics of financial leverage Optimal capital structure  Discussion of the effects of the TCJA on corporate taxes Financial distress and bankruptcy	Illustrates effect of leverage on risk and return. Describes the basic trade-offs leading to an optimal capital structure.  Briefly surveys the bankruptcy process.
<b>Chapter 14</b>	<b>Updated</b> opener with Tempur Sealy dividend and buyback announcements <b>Updated</b> figures on aggregate dividends, stock repurchases, and proportion of firms paying dividends Dividends and dividend policy  <b>Updated</b> examples and <b>Finance Matters</b> box covering buyback activity	Raises questions about why raising dividends and repurchasing stock would please investors. Brings students the latest thinking and evidence on dividend policy.  Describes dividend payments and the factors favoring higher and lower payout policies. Includes recent survey results on setting dividend policy. Explores the reasons that buybacks are gaining in popularity now, following the recent recession.
<b>Chapter 15</b>	<b>New</b> Discussion of entrepreneurship and venture capital IPO valuation  Dutch auctions  <b>New</b> Discussion of SPACS Subsection on crowdfunding Subsection on initial coin offerings Discussion of direct listing <b>Updated</b> tables and figures on IPO initial returns and number of offerings	Discussion of entrepreneurship, the types of of venture capital, and venture capital providers. Extensive, up-to-date discussion of IPOs, including the 1999–2000 period and the recent Alibaba IPO. Explains uniform price (“Dutch”) auctions using Google IPO as an example. Explains how SPACS work. Discusses the JOBS Act and crowdfunding.
<b>PART EIGHT</b>	<b>Short-Term Financial Management</b>	
<b>Chapter 16</b>	Operating and cash cycles Short-term financial planning  <b>Updated Finance Matters</b> box discussing operating and cash cycles	Stresses the importance of cash flow timing. Illustrates the creation of cash budgets and the potential need for financing.  Explores how comparing the cash cycles of companies can reveal whether a company is performing well.
<b>Chapter 17</b>	Cash collection and disbursement  Credit management Inventory management	Examination of systems used by firms to handle cash inflows and outflows. Analysis of credit policy and implementation. Brief overview of important inventory concepts.
<b>PART NINE</b>	<b>Topics in Business Finance</b>	
<b>Chapter 18</b>	<b>Updated</b> opener on corporate cash held in international accounts Foreign exchange International capital budgeting  <b>Updated</b> discussion of exchange rates and political risk Discussion of the Tax Cuts and Jobs Act	Raises questions about how currency appreciation affects the broader economy. Covers essentials of exchange rates and their determination. Shows how to adapt the basic DCF approach to handle exchange rates. Discusses hedging and issues surrounding sovereign risk. Discusses how U.S. legislation changes the way that corporations manage their profits to minimize taxes.

# Learning Solutions

In addition to illustrating relevant concepts and presenting up-to-date coverage, *Essentials of Corporate Finance* strives to present the material in a way that makes it engaging and easy to understand. To meet the varied needs of the intended audience, *Essentials of Corporate Finance* is rich in valuable learning tools and support.

Each feature can be categorized by the benefit to the student:

- Real financial decisions
- Application tools
- Study aids

## REAL FINANCIAL DECISIONS

We have included two key features that help students connect chapter concepts to how decision makers use this material in the real world.

## ▼ CHAPTER-OPENING VIGNETTES

Each chapter begins with a contemporary real-world event to introduce students to chapter concepts.

FINANCE MATTERS

### Exotic Bonds

Bonds come in many flavors. The unusual types are called “exotics” and can range from the fairly simple to the truly esoteric. Take the case of mortgage-backed securities (MBSs). MBSs are a type of securitized financial instrument. In securitization, cash flows from financial assets are pooled together into securities, and the securities are sold to investors. With an MBS, banks or mortgage brokers who originate mortgages sell the mortgages to a trust. The trust pools the mortgages and sells bonds to investors. Bondholders receive payments based on the mortgage payments made by homeowners. During 2008, problems with MBSs skyrocketed due to the precipitous drop in real estate values and the sharply increased default rates on the underlying mortgages.

The reverse convertible is a relatively new type of structured note. One type generally offers a high coupon rate, but the redemption at maturity can be paid in cash at par value or paid in shares of stock. For example, one recent General Motors (GM) reverse convertible had a coupon rate of 16 percent, which is a very high coupon rate in today’s interest rate environment. However, at maturity, if GM’s stock declined sufficiently, bondholders would receive a fixed number of GM shares that were worth less than par value. So, while the income portion of the bond return would be high, the potential loss in par value easily could erode the extra return.

Catastrophe (CAT) bonds are issued to cover insurance companies against natural catastrophes. The type of natural catastrophe is outlined in the bond. For example, about 30 percent of all CAT bonds protect against a North

issues, each worth \$100 million, were triggered due to an unusually active tornado season, and a CAT bond was triggered due to the 2017 earthquake in Mexico. This bond was issued on August 4th and the earthquake occurred on September 7th.

In 2019, Conservation Capital issued rhino impact bonds (RIB). The bonds are designed to increase the population of black rhinos in Kenya and South Africa, which has fallen from 65,000 in the 1970s to about 5,500 today. Bondholders receive payments based on the “outcome payments” model. In this case, payments will be based on the population of black rhinos in five years. An independent evaluator will determine whether the RIB target has been achieved, and bondholders will receive a return relative to the RIB target. Depending on how successful these bonds are, look for more bonds based on environmental goals.

During the COVID-19 pandemic, a new bond type, coronavirus bonds, came to market. The proceeds of the bonds were to go toward work linked to the pandemic. Between February and May 2020, more than \$150 billion of these bonds were issued. For example, Bank of America issued \$1 billion in coronavirus bonds that would be used to support the health care industry. Of course, what is or isn’t a coronavirus bond is a gray area. Pfizer issued \$1.25 billion in bonds that were classified as coronavirus bonds by an outside agency. Pfizer disagreed with the categorization.

Perhaps the most unusual bond (and certainly the most ghoulish) is the “death bond.” Companies such as Stone

## ▲ FINANCE MATTERS BOXES

Most chapters include at least one *Finance Matters* box, which takes a chapter issue and shows how it is being used right now in everyday financial decision making.

PART FOUR Valuing Stocks and Bonds

## 6 Interest Rates and Bond Valuation

Generally, when you make an investment, you expect that you will get back more money in the future than you invested today. But in late 2020 and early 2021, this wasn’t the case for many bond investors. In November 2020, the Chinese government issued five-year bonds with a yield of negative .152 percent. Ten-year government bonds in Germany, France, the Netherlands, and Switzerland all had a negative yield in early 2021. Worldwide, in December 2020, the amount of bonds with a negative yield reached \$18.04 trillion, or about 27 percent of investment-grade debt outstanding. Of course, negative yields were not restricted to government bonds. In January 2021, Veolia, a French environmental services company, issued six-year bonds with a yield of negative .021 percent.

So what happened? Central banks were in a race to the bottom, lowering interest rates in an attempt to improve their domestic economies.

This chapter takes what we have learned about the time value of money and shows how it can be used to value one of the most common of all financial assets, a bond. It then discusses bond features, bond types, and the operation of the bond market.

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- LO 1 Identify important bond features and types of bonds.
- LO 2 Describe bond values and why they fluctuate.
- LO 3 Discuss bond ratings and what they mean.
- LO 4 Evaluate the impact of inflation on interest rates.
- LO 5 Explain the term structure of interest rates and the determinants of bond yields.

## APPLICATION TOOLS

Because there is more than one way to solve problems in corporate finance, we include many sections that encourage students to learn or brush up on different problem-solving methods, including financial calculator and Excel spreadsheet skills.

### ▼ WORK THE WEB

These in-chapter boxes show students how to research financial issues using the web and how to use the information they find to make business decisions. All the *Work the Web* boxes also include interactive follow-up questions and exercises.

#### WORK THE WEB

Bond quotes have become more available with the rise of the web. One site where you can find current bond prices (from TRACE) is [finra-markets.morningstar.com/BondCenter](http://finra-markets.morningstar.com/BondCenter). We went to the site and entered "AZO" for AutoZone, the well-known auto parts company. We found a total of 14 bond issues outstanding. Here you see some of the information we pulled up.

Issuer Name	Symbol	Callable	Sub-Product Type	Coupon	Maturity	Ratings			Last Sale
						Moody's	S&P	Price	Yield
<input type="checkbox"/> AUTOZONE INC.	AZ03844912	Yes	Corporate Bond	3.750	04/15/2023	Baa1	BBB	103.240	0.358
<input type="checkbox"/> AUTOZONE INC.	AZ03925874	Yes	Corporate Bond	2.875	01/15/2023	Baa1	BBB	104.337	0.343
<input type="checkbox"/> AUTOZONE INC.	AZ03980609	Yes	Corporate Bond	3.125	07/15/2023	Baa1	BBB	105.910	0.444
<input type="checkbox"/> AUTOZONE INC.	AZ04235548	Yes	Corporate Bond	2.800	04/15/2021	Baa1	BBB	100.324	0.188
<input type="checkbox"/> AUTOZONE INC.	AZ04235810	Yes	Corporate Bond	2.250	04/15/2025	Baa1	BBB	103.377	0.242
<input type="checkbox"/> AUTOZONE INC.	AZ04348412	Yes	Corporate Bond	3.125	04/01/2026	Baa1	BBB	109.751	1.109
<input type="checkbox"/> AUTOZONE INC.	AZ04423885	Yes	Corporate Bond	3.750	05/01/2027	Baa1	BBB	114.658	1.240
<input type="checkbox"/> AUTOZONE INC.	AZ04618043	Yes	Corporate Bond	3.125	04/15/2024	Baa1	BBB	107.916	0.583
<input type="checkbox"/> AUTOZONE INC.	AZ04618553	Yes	Corporate Bond	3.750	04/15/2025	Baa1	BBB	113.386	1.067
<input type="checkbox"/> AUTOZONE INC.	AZ04871783	Yes	Corporate Bond	3.625	04/15/2025	Baa1	BBB	111.248	0.852

Most of the information is self-explanatory. The Price and Yield columns show the price and yield to maturity of the issues based on their most recent sales. If you need more information about a particular issue, clicking on it will give you more details such as coupon dates and call dates.

#### QUESTIONS

1. Go to this website and find the last bond shown in the accompanying table. When was this bond issued? What was the size of the bond issue? What were the yield to maturity and price when the bond was issued?
2. When you search for Chevron bonds (CVX), you will find bonds for several companies listed. Why do you think Chevron has bonds issued with different corporate names?

### ▼ CHAPTER CASES

Located at the end of most chapters, these cases focus on hypothetical company situations that embody corporate finance topics. Each case presents a new scenario, data, and a dilemma. Several questions at the end of each case require students to analyze and focus on all of the material they learned from the chapters in that part. These are great for homework or in-class exercises and discussions!

#### CHAPTER CASE

##### Financing S&S Air's Expansion Plans with a Bond Issue

Mark Sexton and Todd Story, the owners of S&S Air, have decided to expand their operations. They instructed their newly hired financial analyst, Chris Guthrie, to enlist an underwriter to help sell \$20 million in new 10-year bonds to finance construction. Chris has entered into discussions with Renata Harper, an underwriter from the firm of Crowe & Mallard, about which bond features S&S Air should consider and what coupon rate the issue will likely have.

Although Chris is aware of the bond features, he is uncertain as to the costs and benefits of some features, so he isn't clear on how each feature would affect the coupon rate of the bond issue. You are Renata's assistant, and she has asked you to prepare a memo to Chris describing the effect of each of the following bond features on the coupon rate of the bond. She also would like you to list any advantages or disadvantages of each feature.

#### QUESTIONS

1. The security of the bond—that is, whether the bond has collateral.
2. The seniority of the bond.
3. The presence of a sinking fund.
4. A call provision with specified call dates and call prices.
5. A deferred call accompanying the preceding call provision.
6. A make-whole call provision.
7. Any positive covenants. Also, discuss several possible positive covenants S&S Air might consider.
8. Any negative covenants. Also, discuss several possible negative covenants S&S Air might consider.
9. A conversion feature (note that S&S Air is not a publicly traded company).
10. A floating-rate coupon.

### EXPLANATORY WEB LINKS ▼

These web links are provided in the margins of the text. They are specifically selected to accompany text material and provide students and instructors with a quick way to check for additional information using the internet.

trading volume. On the New York Stock Exchange, for example, it is possible to see the price and quantity for every single transaction. In contrast, in the bond market, historically it was not possible to observe either. Transactions are privately negotiated between parties, and there is little or no centralized reporting of transactions.

Although the total volume of trading in bonds far exceeds that in stocks, only a very small fraction of the total bond issues that exist actually trade on a given day. This means that getting up-to-date prices on individual bonds is often difficult or impossible, particularly for smaller corporate or municipal issues. Instead, a variety of sources of estimated prices exist and are very commonly used.

#### Bond Price Reporting

In 2002, transparency in the corporate bond market began to improve dramatically. Under new regulations, corporate bond dealers are now required to report trade information through what is known as the Trade Reporting and Compliance Engine (TRACE). A nearby *Work the Web* box shows how to get TRACE prices.

As we mentioned before, the U.S. Treasury market is the largest securities market in the world. As with bond markets in general, it is an OTC market, so there is limited transparency. However, unlike the situation with bond markets in general, trading in Treasury issues, particularly recently issued ones, is very heavy. Each day, representative prices for outstanding Treasury issues are reported.

To learn more about TRACE, visit [www.finra.org](http://www.finra.org).

### WHAT'S ON THE WEB? ►

These end-of-chapter activities show students how to use and learn from the vast amount of financial resources available on the internet.

**6.1 Bond Quotes** You can find current bond prices at [finra-markets.morningstar.com/BondCenter](http://finra-markets.morningstar.com/BondCenter). You want to find the bond prices and yields for bonds issued by Pfizer. Enter the ticker symbol "PFE" to do a search. What is the shortest-maturity bond issued by Pfizer that is outstanding? What is the longest-maturity bond? What is the credit rating for Pfizer's bonds? Do all of the bonds have the same credit rating? Why do you think this is?

**6.2 Default Premiums** The Federal Reserve Bank of St. Louis has files listing historical interest rates on its website [www.stlouisfed.org](http://www.stlouisfed.org). Find your way to the "FRED<sup>SM</sup>" data.

### WHAT'S ON THE WEB?

### HOW TO CALCULATE BOND PRICES AND YIELDS USING A FINANCIAL CALCULATOR

Many financial calculators have fairly sophisticated built-in bond valuation routines. However, these vary quite a lot in implementation, and not all financial calculators have them. As a result, we will illustrate a simple way to handle bond problems that will work on just about any financial calculator.

To begin, of course, we first remember to clear out the calculator! Next, for Example 6.3, we have two bonds to consider, both with 12 years to maturity. The first one sells for \$935.08 and has a 10 percent coupon rate. To find its yield, we can do the following:

Enter      12                      100      -935.08      1,000  
              N                      PMT      PV                      FV  
 Solve for                      11

Notice that here we have entered both a future value of \$1,000, representing the bond's face value, and a payment of 10 percent of \$1,000, or \$100, per year, representing the bond's annual coupon. Also notice that we have a negative sign on the bond's price, which we have entered as the present value.

### CALCULATOR HINTS

### ◀ CALCULATOR HINTS

*Calculator Hints* is a self-contained section occurring in various chapters that first introduces students to calculator basics and then illustrates how to solve problems with the calculator. Appendix D goes into more detailed instructions by solving problems with two specific calculators.

### EXCEL MASTER ICONS ►

Topics covered in the comprehensive Excel Master supplement (found in Connect) are indicated by an icon in the margin.

### 6.1 BONDS AND BOND VALUATION

When a corporation (or government) wishes to borrow money from the public on a long-term basis, it usually does so by issuing, or selling, debt securities that are generically called bonds. In this section, we describe the various features of corporate bonds and some of the terminology associated with bonds. We then discuss the cash flows associated with a bond and how bonds can be valued using our discounted cash flow procedure.

### SPREADSHEET STRATEGIES ►

The unique *Spreadsheet Strategies* feature is also in a self-contained section, showing students how to set up spreadsheets to solve problems—a vital part of every business student's education.

### SPREADSHEET STRATEGIES

### HOW TO CALCULATE BOND PRICES AND YIELDS USING A SPREADSHEET

Like financial calculators, most spreadsheets have fairly elaborate routines available for calculating bond values and yields; many of these routines involve details that we have not discussed. However, setting up a simple spreadsheet to calculate prices or yields is straightforward, as our next two spreadsheets show:

	A	B	C	D	E	F	G	H
1								
2	Using a spreadsheet to calculate bond yields							
3								
4	Suppose we have a bond with 22 years to maturity, a coupon rate of 8 percent, and a price of							
5	\$960.17. If the bond makes semiannual payments, what is its yield to maturity?							
6								
7	Settlement date:	1/1/20						
8	Maturity date:	1/1/42						
9	Annual coupon rate:	.08						
10	Bond price (% of par):	96.017						
11	Face value (% of par):	100						
12	Coupons per year:	2						
13	Yield to maturity:	.084						
14								
15	The formula entered in cell B13 is =YIELD(B7, B8, B9, B10, B11, B12); notice that face value and bond							
16	price are entered as a percentage of face value.							

### INTERMEDIATE (Questions 18–33)

#### LO 2

**18. Bond Price Movements** Bond X is a premium bond making semiannual payments. The bond has a coupon rate of 6.8 percent, a YTM of 6.2 percent, and 13 years to maturity. Bond Y is a discount bond making semiannual payments. This bond has a coupon rate of 6.2 percent, a YTM of 6.8 percent, and also 13 years to maturity. What are the prices of these bonds today assuming both bonds have a \$1,000 par value? If interest rates remain unchanged, what do you expect the prices of these bonds to be in 1 year? In 3 years? In 8 years? In 12 years? In 13 years? What's going on here? Illustrate your answers by graphing bond prices versus time to maturity.

#### LO 2

**19. Interest Rate Risk** Both Bond Sam and Bond Dave have 7.1 percent coupons, make semiannual payments, and are priced at par value. Bond Sam

### ◀ EXCEL SIMULATIONS

Indicated by an Excel icon next to applicable end-of-chapter questions and problems, Excel simulation exercises are available for selected problems in Connect. For even more spreadsheet practice, check out Excel Master, also available in Connect.

## STUDY AIDS

We want students to get the most from this book and this course, and we realize that students have different learning styles and study needs. We therefore present a number of study features to appeal to a wide range of students.

### ▼ LEARNING OBJECTIVES

Each chapter begins with a number of learning objectives that are key to the student's understanding of the chapter. Learning objectives also are linked to end-of-chapter problems and test bank questions.

### ▼ PEDAGOGICAL USE OF COLOR

We continue to use a full-color palette in *Essentials* not only to make the text more inviting, but, more important, as a functional element to help students follow the discussion. In almost every chapter, color plays an important, largely self-evident role.

before the date of record (discussed next). If you buy the stock before this date, then you are entitled to the dividend. If you buy on this date or after, then the previous owner will get the dividend.

In Figure 14.1, Thursday, January 29, is the ex-dividend date. Before this date, the stock is said to trade "with dividend," or "cum dividend." Afterward, the stock trades "ex dividend."

1. **Declaration date:** The board of directors declares a payment of dividends.
2. **Ex-dividend date:** A share of stock goes ex dividend on the date the seller is entitled to keep the dividend; under NYSE rules, shares are traded ex dividend on and after the business day prior to the record date.
3. **Record date:** The declared dividends are distributable to those who are shareholders of record as of this specific date.
4. **Payment date:** The dividend checks are mailed to shareholders of record.

#### ex-dividend date

Date one business day before the date of record, establishing those individuals entitled to a dividend.

FIGURE 14.1

Example of the procedure for dividend payment

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- LO 1** Determine the future value and present value of investments with multiple cash flows.
- LO 2** Calculate loan payments, and find the interest rate on a loan.
- LO 3** Describe how loans are amortized or paid off.
- LO 4** Explain how interest rates are quoted (and misquoted).

### CRITICAL THINKING QUESTIONS ►

Every chapter ends with a set of critical thinking questions that challenge the students to apply the concepts they learned in the chapter to new situations.

### CRITICAL THINKING AND CONCEPTS REVIEW

- LO 2** **14.1 Dividend Policy Irrelevance** How is it possible that dividends are so important, but, at the same time, dividend policy is irrelevant?
- LO 4** **14.2 Stock Repurchases** What is the impact of a stock repurchase on a company's debt ratio? Does this suggest another use for excess cash?
- LO 1** **14.3 Life-Cycle Theory of Dividends** Explain the life-cycle theory of dividend payments. How does it explain corporate dividend payments that are seen in the stock market?
- LO 1** **14.4 Dividend Chronology** On Friday, December 8, Hometown Power Co.'s board of directors declares a dividend of 75 cents per share payable on Tuesday, January 16, to shareholders of record as of Tuesday, January 2. When is the ex-dividend date? If a shareholder buys stock before that date, who gets the dividends on those shares, the buyer or the seller?
- LO 1** **14.5 Alternative Dividends** Some corporations, like one British company that offers its large shareholders free crematorium use, pay dividends in kind (i.e., offer their services to shareholders at below-market cost). Should mutual funds invest in stocks that pay these dividends in kind? (The fundholders do not receive these services.)
- LO 2** **14.6 Dividends and Stock Price** If increases in dividends tend to be followed by (immediate) increases in share prices, how can it be said that dividend

### CONCEPT QUESTIONS

- 6.1a** What are the cash flows associated with a bond?
- 6.1b** What is the general expression for the value of a bond?
- 6.1c** Is it true that the only risk associated with owning a bond is that the issuer will not make all the payments? Explain.

### ◀ CONCEPT QUESTIONS

Chapter sections are intentionally kept short to promote a step-by-step, building-block approach to learning. Each section is then followed by a series of short concept questions that highlight the key ideas just presented. Students use these questions to make sure they can identify and understand the most important concepts as they read.

**EXAMPLE 11.4** Portfolio Variance and Standard Deviation

In Example 11.3, what are the standard deviations on the two portfolios? To answer, we first have to calculate the portfolio returns in the two states. We will work with the second portfolio, which has 50 percent in Stock A and 25 percent in each of Stocks B and C. The relevant calculations can be summarized as follows:

State of Economy	Probability of State	Returns			
		Stock A	Stock B	Stock C	Portfolio
Boom	.40	10%	15%	20%	13.75%
Bust	.60	8	4	0	5.00

**NUMBERED EXAMPLES**

Separate numbered and titled examples are extensively integrated into the chapters. These examples provide detailed applications and illustrations of the text material in a step-by-step format. Each example is completely self-contained so that students don't have to search for additional information. Based on our classroom testing, these examples are among the most useful learning aids because they provide both detail and explanation.

**SUMMARY TABLES**

These tables succinctly restate key principles, results, and equations. They appear whenever it is useful to emphasize and summarize a group of related concepts.

**I. Internal growth rate**

$$\text{Internal growth rate} = \frac{\text{ROA} \times b}{1 - \text{ROA} \times b}$$

where:

- ROA = Return on assets = Net income/Total assets
- b = Plowback (retention) ratio
- = Addition to retained earnings/Net income
- = 1 – Dividend payout ratio

The internal growth rate is the maximum growth rate that can be achieved with no external financing of any kind.

**II. Sustainable growth rate**

$$\text{Sustainable growth rate} = \frac{\text{ROE} \times b}{1 - \text{ROE} \times b}$$

where:

- ROE = Return on equity = Net income/Total equity
- b = Plowback (retention) ratio
- = Addition to retained earnings/Net income
- = 1 – Dividend payout ratio

The sustainable growth rate is the maximum growth rate that can be achieved with no external equity financing while maintaining a constant debt-equity ratio.

**TABLE 3.10**

Summary of internal and sustainable growth rates

**3.2 RATIO ANALYSIS**

**financial ratios**  
Relationships determined from a firm's financial information and used for comparison purposes.

Another way of avoiding the problems involved in comparing companies of different sizes is to calculate and compare **financial ratios**. Such ratios are ways of comparing and investigating the relationships between different pieces of financial information. We cover some of the more common ratios next, but there are many others that we don't touch on.

One problem with ratios is that different people and different sources frequently don't compute them in exactly the same way, and this leads to much confusion. The specific definitions we use here may or may not be the same as ones you have seen or will see elsewhere. If you are ever using ratios as a tool for analysis, you should be careful to document how you

**KEY TERMS**

These are printed in blue the first time they appear and are defined within the text and in the margin.

**KEY EQUATIONS**

These are called out in the text and identified by equation numbers. Appendix B shows the key equations by chapter.

**Total Debt Ratio** The *total debt ratio* takes into account all debts of all maturities to all creditors. It can be defined in several ways, the easiest of which is:

$$\begin{aligned} \text{Total debt ratio} &= \frac{\text{Total assets} - \text{Total equity}}{\text{Total assets}} \\ &= \frac{\$3,630 - 2,625}{\$3,630} = .28 \text{ times} \end{aligned} \quad (3.4)$$

In this case, an analyst might say that Prufrock uses 28 percent debt.<sup>1</sup> Whether this is high or low or whether it even makes any difference depends on whether or not capital structure matters, a subject we discuss in a later chapter.

Prufrock has \$.28 in debt for every \$1 in total assets. Therefore, there is \$.72 in equity (= \$1 – .28) for every \$.28 in debt. With this in mind, we can define two useful variations on the total debt ratio, the *debt-equity ratio* and the *equity multiplier*:

$$\begin{aligned} \text{Debt-equity ratio} &= \text{Total debt} / \text{Total equity} \\ &= \$ .28 / \$ .72 = .38 \text{ times} \end{aligned} \quad (3.5)$$

$$\begin{aligned} \text{Equity multiplier} &= \text{Total assets} / \text{Total equity} \\ &= \$1 / \$ .72 = 1.38 \text{ times} \end{aligned} \quad (3.6)$$

The fact that the equity multiplier is 1 plus the debt-equity ratio is not a coincidence:

$$\begin{aligned} \text{Equity multiplier} &= \text{Total assets} / \text{Total equity} = \$1 / \$ .72 = 1.38 \text{ times} \\ &= (\text{Total equity} + \text{Total debt}) / \text{Total equity} \\ &= 1 + \text{Debt-equity ratio} = 1.38 \text{ times} \end{aligned}$$

The thing to notice here is that given any one of these three ratios, you can immediately calculate the other two, so they all say exactly the same thing.

**Times Interest Earned** Another common measure of long-term solvency is the *times interest earned (TIE) ratio*. Once again, there are several possible (and common) definitions, but we'll stick with the most traditional:

$$\begin{aligned} \text{Times interest earned ratio} &= \frac{\text{EBIT}}{\text{Interest}} \\ &= \frac{\$741}{\$141} = 5.26 \text{ times} \end{aligned} \quad (3.7)$$

As the name suggests, this ratio measures how well a company has its interest obliga-

Maximize the market value of the existing owners' equity.

**HIGHLIGHTED PHRASES**

Throughout the text, important ideas are presented separately and printed in boxes to indicate their importance to the students.

## SUMMARY AND CONCLUSIONS

This chapter has described how to go about putting together a discounted cash flow analysis and evaluating the results. In it, we covered:

1. The identification of relevant project cash flows. We discussed project cash flows and described how to handle some issues that often come up, including sunk costs, opportunity costs, financing costs, net working capital, and erosion.
2. Preparing and using pro forma, or projected, financial statements. We showed how pro forma financial statement information is useful in coming up with projected cash flows.
3. The use of scenario and sensitivity analysis. These tools are widely used to evaluate the impact of assumptions made about future cash flows and NPV estimates.
4. Additional issues in capital budgeting. We examined the managerial options implicit in many capital budgeting situations. We also discussed the capital rationing problem.

The discounted cash flow analysis we've covered here is a standard tool in the business

## CHAPTER SUMMARY AND CONCLUSIONS ▲

These paragraphs review the chapter's key points and provide closure to the chapter.

## CHAPTER REVIEW AND SELF-TEST PROBLEMS

- 9.1 Calculating Operating Cash Flow** Mater Pasta, Inc., has projected a sales volume of \$1,432 for the second year of a proposed expansion project. Costs normally run 70 percent of sales, or about \$1,002 in this case. The depreciation expense will be \$80, and the tax rate is 22 percent. What is the operating cash flow? (See Problem 9.)

## ◀ CHAPTER REVIEW AND SELF-TEST PROBLEMS

Review and self-test problems appear after the chapter summaries. Detailed answers to the self-test problems immediately follow. These questions and answers allow students to test their abilities in solving key problems related to the content of the chapter. These problems are mapped to similar problems in the end-of-chapter material. The aim is to help students work through difficult problems using the authors' work as an example.

## END-OF-CHAPTER QUESTIONS AND PROBLEMS ►

We have found that many students learn better when they have plenty of opportunity to practice. We therefore provide extensive end-of-chapter questions and problems linked to Learning Objectives. The questions and problems are generally separated into three levels—Basic, Intermediate, and Challenge. All problems are fully annotated so that students and instructors can readily identify particular types. Throughout the text, we have worked to supply interesting problems that illustrate real-world applications of chapter material. Answers to selected end-of-chapter problems appear in Appendix C.

## QUESTIONS AND PROBLEMS

 connect

Select problems are available in McGraw-Hill Connect. Please see the packaging options section of the Preface for more information.

### BASIC (Questions 1–22)

- LO 1** 1. **Calculating Payback** What is the payback period for the following set of cash flows?

Year	Cash Flow
0	–\$7,700
1	1,900
2	3,000
3	2,300
4	1,700

- LO 1** 2. **Calculating Payback** An investment project provides cash inflows of \$835 per year for eight years. What is the project payback period if the initial cost is \$1,900? What if the initial cost is \$3,600? What if it is \$7,400?

- LO 1** 3. **Calculating Payback** Kara, Inc., imposes a payback cutoff of three years for its international investment projects. If the company has the following two projects available, should it accept either of them?

Year	Cash Flow (A)	Cash Flow (B)
------	---------------	---------------

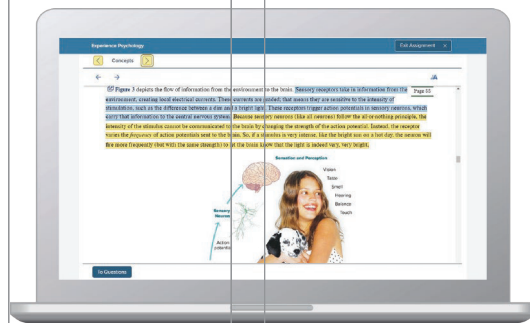

## Instructors: Student Success Starts with You

### Tools to enhance your unique voice

Want to build your own course? No problem. Prefer to use an OLC-aligned, prebuilt course? Easy. Want to make changes throughout the semester? Sure. And you'll save time with Connect's auto-grading too.

**65%**  
Less Time  
Grading

# Comprehensive Teaching and Learning Package

This edition of *Essentials* has more options than ever in terms of the textbook, instructor supplements, student supplements, and multimedia products. Mix and match to create a package that is perfect for your course!

## Assurance of Learning Ready

Assurance of learning is an important element of many accreditation standards. *Essentials of Corporate Finance*, eleventh edition, is designed specifically to support your assurance of learning initiatives. Each chapter in the book begins with a list of numbered learning objectives that appear throughout the end-of-chapter problems and exercises. Every test bank question also is linked to one of these objectives, in addition to level of difficulty, topic area, Bloom's Taxonomy level, and AACSB skill area. Connect, McGraw Hill's online homework solution, and Test Builder can search the test bank by these and other categories, providing an engine for targeted Assurance of Learning analysis and assessment.

## AACSB Statement

McGraw Hill is a proud corporate member of AACSB International. Understanding the importance and value of AACSB Accreditation, *Essentials of Corporate Finance*, eleventh edition, has sought to recognize the curricula guidelines detailed in the AACSB standards for business accreditation by connecting selected questions in the test bank to the general knowledge and skill guidelines found in the AACSB standards.

The statements contained in *Essentials of Corporate Finance*, eleventh edition, are provided only as a guide for the users of this text. The AACSB leaves content coverage and assessment within the purview of individual schools, the mission of the school, and the faculty. While *Essentials of Corporate Finance*, eleventh edition, and the teaching package make no claim of any specific AACSB qualification or evaluation, we have, within the test bank, labeled selected questions according to the six general knowledge and skills areas.

## McGraw Hill Customer Care Contact Information

At McGraw Hill, we understand that getting the most from new technology can be challenging. That's why our services don't stop after you purchase our products. You can e-mail our Product Specialists 24 hours a day to get product training online. Or you can search our knowledge bank of Frequently Asked Questions on our support website. For Customer Support, call **800-331-5094**, or visit [mpss.mhhe.com](http://mpss.mhhe.com). One of our Technical Support Analysts will be able to assist you in a timely fashion.

## Instructor Supplements

### ■ Instructor's Manual (IM)

*Prepared by Joshua Spizman, Loyola Marymount University*

A great place to find new lecture ideas! This annotated outline for each chapter includes Lecture Tips, Real-World Tips, Ethics Notes, suggested PowerPoint slides, and, when appropriate, a video synopsis.

### ■ Solutions Manual (SM)

*Prepared by Bradford D. Jordan, University of Florida and Joseph Smolira, Belmont University.*

The *Essentials* Solutions Manual provides detailed solutions to the extensive end-of-chapter material, including concept review questions, quantitative problems, and cases. Select chapters also contain calculator solutions.

### ■ Test Bank

*Prepared by Joseph Hegger, University of Missouri*

Great format for a better testing process! All questions closely link with the text material, listing section number, Learning Objective, Bloom's Taxonomy Question Type, and AACSB topic when applicable. Each chapter covers a breadth of topics and types of questions, including questions that test the understanding of the key terms; questions patterned after the learning objectives, concept questions, chapter-opening vignettes, boxes, and highlighted phrases; multiple-choice and true/false problems patterned after the end-of-chapter questions, in basic, intermediate, and challenge levels; and essay questions to test problem-solving skills and more advanced

understanding of concepts. Each chapter also includes new problems that pick up questions directly from the end-of-chapter material and converts them into parallel test bank questions. For your reference, each test bank question in this part is linked with its corresponding question in the end-of-chapter section.

#### ■ **Test Builder**

Available within Connect, Test Builder is a cloud-based tool that enables instructors to format tests that can be printed or administered within an LMS. Test Builder offers a modern, streamlined interface for easy content configuration that matches course needs, without requiring a download.

Test Builder allows you to:

- Access all test bank content from a particular title.
- Easily pinpoint the most relevant content through robust filtering options.
- Manipulate the order of questions or scramble questions and/or answers.
- Pin questions to a specific location within a test.
- Determine your preferred treatment of algorithmic questions.
- Choose the layout and spacing.
- Add instructions and configure default settings.

Test Builder provides a secure interface for better protection of content and allows for just-in-time updates to flow directly into assessments.

#### ■ **PowerPoint Presentation System**

Customize our content for your course! This presentation has been thoroughly revised to include more lecture-oriented slides, as well as exhibits and examples both from the book and from outside sources. Applicable slides have web links that take you directly to specific internet sites or spreadsheet links to show an example in Excel. You also can go to the Notes Page function for more tips in presenting the slides. Additional PowerPoint slides work through example problems for instructors to show in class. If you already have PowerPoint installed on your computer, you have the ability to edit, print, or rearrange the complete presentation to meet your specific needs.

#### ■ **Excel Simulations**

With 180 Excel simulation questions now included in Connect, McGraw Hill's Ross series is the unparalleled leader in offering students the opportunity to practice using the Excel functions they will use throughout their careers in finance.

#### ■ **Corporate Finance Videos**

These brief and engaging conceptual videos (and accompanying questions) help students to master the building blocks of the Corporate Finance course.

### **Blog**

Our blog at <https://essentialsofcorporatefinance.blogspot.com/> has current real-world events that relate to topics discussed in the textbook.

### **Student Supplements**

#### ■ **Excel Resources**

A great resource for those seeking additional practice, students can access Excel template problems and the Excel Master tutorial designed by Brad Jordan and Joe Smolira.

#### ■ **Narrated Lecture Videos**

Updated for this edition, the Narrated Lecture Videos provide real-world examples accompanied by step-by-step instructions and explanations for solving problems presented in the chapter. The Concept Checks from the text also are integrated into the slides to reinforce the key topics in the chapter. Designed specifically to appeal to different learning styles, the videos provide a visual and audio explanation of topics and problems.

### **Teaching Support**

Along with having access to all of the same material your students can view through Connect, you also have password-protected access to the Instructor's Manual, solutions to end-of-chapter problems and cases, Instructor's Excel Master, PowerPoint, Excel template solutions, video clips, and video projects and questions.

# Acknowledgments

Clearly, our greatest debt is to our many colleagues (and their students) around the world who, like us, wanted to try an alternative to what they were using and made the switch to our text. Our plan for developing and improving *Essentials*, eleventh edition, revolved around the detailed feedback we received from many of our colleagues over the years who had an interest in the book and regularly teach the introductory course. These dedicated scholars and teachers to whom we are very grateful are:

We also thank online coauthor Joseph C. Smolira, Belmont University, for his work on this edition. Joe worked closely with us to develop the solutions manual, along with many of the vignettes and real-world examples we have added to this edition.

Steve Hailey and Emily Bello did outstanding work on this edition of *Essentials*. To them fell the unenviable task of technical proofreading, and, in particular, careful checking of each and every calculation throughout the text.

Finally, in every phase of this project, we have been privileged to have the complete and unwavering support of a great organization, McGraw Hill. We especially thank the MHE sales organization. The suggestions they provided, their professionalism in assisting potential adopters, and their service to current adopters have been a major factor in our success.

We are deeply grateful to the select group of professionals who served as our development team on this edition: Chuck Synovec, Director; Allison McCabe-Carroll, Senior Product Developer; Trina Maurer, Senior Marketing Manager; Jamie Koch and Fran Simon, Content Project Managers; Matt Diamond, Senior Designer; and Michele Janicek, Lead Product Developer. Others at McGraw Hill, too numerous to list here, have improved the book in countless ways.

Throughout the development of this edition, we have taken great care to discover and eliminate errors. Our goal is to provide the best textbook available on the subject. To ensure that future editions are error-free, we will gladly offer \$10 per arithmetic error to the first individual reporting it as a modest token of our appreciation. More than this, we would like to hear from instructors and students alike. Please send your comments to Dr. Bradford Jordan, c/o Editorial-Finance, McGraw Hill, 120 S. Riverside Drive, 12th Floor, Chicago, IL 60606.

## PART ONE OVERVIEW OF FINANCIAL MANAGEMENT

### 1 Introduction to Financial Management 1

#### 1.1 Finance: A Quick Look 2

- The Five Basic Areas 2
  - Corporate Finance* 2
  - Investments* 2
  - Financial Institutions* 3
  - International Finance* 3
  - Fintech* 3
- Why Study Finance? 3
  - Marketing and Finance* 3
  - Accounting and Finance* 3
  - Management and Finance* 4
  - Technology and Finance* 4
  - You and Finance* 5

#### 1.2 Business Finance and the Financial Manager 6

- What Is Business Finance? 6
- The Financial Manager 6
- Financial Management Decisions 6
  - Capital Budgeting* 6
  - Capital Structure* 7
  - Working Capital Management* 7
  - Conclusion* 8

#### 1.3 Forms of Business Organization 8

- Sole Proprietorship 8
- Partnership 8

- Corporation 9
- A Corporation by Another Name . . . 10
  - Benefit Corporation* 10

#### 1.4 The Goal of Financial Management 11

- Profit Maximization 11
- The Goal of Financial Management in a Corporation 11
- A More General Financial Management Goal 12
- Sarbanes-Oxley Act 13

#### 1.5 The Agency Problem and Control of the Corporation 13

- Agency Relationships 14
- Management Goals 14
- Do Managers Act in the Stockholders' Interests? 14
  - Managerial Compensation* 14
  - Control of the Firm* 16
  - Conclusion* 16
- Stakeholders 16

#### 1.6 Financial Markets and the Corporation 17

- Cash Flows to and from the Firm 17
- Primary versus Secondary Markets 18
  - Primary Markets* 18
  - Secondary Markets* 18

#### Summary and Conclusions 19

#### Critical Thinking and Concepts Review 20

#### What's on the Web? 22

#### Chapter Case: The McGee Cake Company 23

## PART TWO UNDERSTANDING FINANCIAL STATEMENTS AND CASH FLOW

### 2 Financial Statements, Taxes, and Cash Flow

#### 2.1 The Balance Sheet 25

- Assets: The Left-Hand Side 25
- Liabilities and Owners' Equity: The Right-Hand Side 25
- Net Working Capital 26
- Liquidity 27
- Debt versus Equity 27
- Market Value versus Book Value 28

#### 2.2 The Income Statement 29

- GAAP and the Income Statement 30
- Noncash Items 30

- Time and Costs 31
- Earnings Management 32

#### 2.3 Taxes 33

- Corporate Tax Rates 33
- Average versus Marginal Tax Rates 34

#### 2.4 Cash Flow 35

- Cash Flow from Assets 36
  - Operating Cash Flow* 36
  - Capital Spending* 37
  - Change in Net Working Capital* 37
  - Conclusion* 37
- A Note on "Free" Cash Flow 38
- Cash Flow to Creditors and Stockholders 38

*Cash Flow to Creditors* 38  
*Cash Flow to Stockholders* 38  
 Conclusion 39  
 An Example: Cash Flows for Dole Cola 39  
*Operating Cash Flow* 39  
*Net Capital Spending* 40  
*Change in NWC and Cash Flow from Assets* 40  
*Cash Flow to Creditors and Stockholders* 40

**Summary and Conclusions 41**

**Chapter Review and Self-Test Problem 42**

**Answer to Chapter Review and Self-Test Problem 43**

**Critical Thinking and Concepts Review 44**

**Questions and Problems 45**

**What's on the Web? 49**

**Excel Master It! Problem 50**

**CHAPTER CASE: Cash Flows and Financial Statements at Sunset Boards, Inc. 51**

### 3 Working with Financial Statements 52

#### 3.1 Standardized Financial Statements 53

*Common-Size Balance Sheets* 54  
*Common-Size Income Statements* 55

#### 3.2 Ratio Analysis 56

*Short-Term Solvency, or Liquidity, Measures* 57  
*Current Ratio* 57  
*Quick (or Acid-Test) Ratio* 58  
*Cash Ratio* 58  
*Long-Term Solvency Measures* 59  
*Total Debt Ratio* 59  
*Times Interest Earned* 59  
*Cash Coverage* 60  
*Asset Management, or Turnover, Measures* 60  
*Inventory Turnover and Days' Sales in Inventory* 60  
*Receivables Turnover and Days' Sales in Receivables* 61

## PART THREE VALUATION OF FUTURE CASH FLOWS

### 4 Introduction to Valuation: The Time Value of Money 100

#### 4.1 Future Value and Compounding 101

*Investing for a Single Period* 101  
*Investing for More Than One Period* 101

#### 4.2 Present Value and Discounting 107

*The Single-Period Case* 108  
*Present Values for Multiple Periods* 108

#### 4.3 More on Present and Future Values 111

*Present versus Future Value* 111

*Total Asset Turnover* 62  
*Profitability Measures* 62  
*Profit Margin* 62  
*Return on Assets* 63  
*Return on Equity* 63  
*Market Value Measures* 63  
*Price-Earnings Ratio* 63  
*Price-Sales Ratio* 64  
*Market-to-Book Ratio* 65  
*Enterprise Value-EBITDA Ratio* 65

#### 3.3 The DuPont Identity 67

*An Expanded DuPont Analysis* 68

#### 3.4 Internal and Sustainable Growth 70

*Dividend Payout and Earnings Retention* 70  
*ROA, ROE, and Growth* 71  
*The Internal Growth Rate* 71  
*The Sustainable Growth Rate* 71  
*Determinants of Growth* 72  
*A Note on Sustainable Growth Rate Calculations* 74

#### 3.5 Using Financial Statement Information 74

*Why Evaluate Financial Statements?* 74  
*Internal Uses* 75  
*External Uses* 75  
*Choosing a Benchmark* 75  
*Time-Trend Analysis* 75  
*Peer Group Analysis* 76  
*Problems with Financial Statement Analysis* 82

**Summary and Conclusions 83**

**Chapter Review and Self-Test Problems 84**

**Answers to Chapter Review and Self-Test Problems 86**

**Critical Thinking and Concepts Review 87**

**Questions and Problems 88**

**What's on the Web? 96**

**Excel Master It! Problem 97**

**CHAPTER CASE: Ratios and Financial Planning at S&S Air, Inc. 98**

*Determining the Discount Rate* 112  
*Finding the Number of Periods* 115

**Summary and Conclusions 118**

**Chapter Review and Self-Test Problems 119**

**Answers to Chapter Review and Self-Test Problems 119**

**Critical Thinking and Concepts Review 120**

**Questions and Problems 121**

**What's on the Web? 124**

**Excel Master It! Problem 124**

**5 Discounted Cash Flow Valuation 125****5.1 Future and Present Values of Multiple Cash Flows 126**

Future Value with Multiple Cash Flows 126  
 Present Value with Multiple Cash Flows 129  
 A Note on Cash Flow Timing 133

**5.2 Valuing Level Cash Flows: Annuities and Perpetuities 134**

Present Value for Annuity Cash Flows 135  
*Annuity Tables* 136  
*Finding the Payment* 137  
*Finding the Rate* 139  
 Future Value for Annuities 140  
 A Note on Annuities Due 140  
 Perpetuities 141

**5.3 Comparing Rates: The Effect of Compounding Periods 143**

Effective Annual Rates and Compounding 143  
 Calculating and Comparing Effective Annual Rates 144

**PART FOUR VALUING STOCKS AND BONDS****6 Interest Rates and Bond Valuation 169****6.1 Bonds and Bond Valuation 170**

Bond Features and Prices 170  
 Bond Values and Yields 170  
 Interest Rate Risk 173  
 Finding the Yield to Maturity: More Trial and Error 175

**6.2 More on Bond Features 179**

Is It Debt or Equity? 180  
 Long-Term Debt: The Basics 180  
 The Indenture 181  
*Terms of a Bond* 182  
*Security* 182  
*Seniority* 183  
*Repayment* 183  
*The Call Provision* 183  
*Protective Covenants* 184

**6.3 Bond Ratings 184****6.4 Some Different Types of Bonds 186**

Government Bonds 186  
 Zero Coupon Bonds 187  
 Floating-Rate Bonds 188  
 Other Types of Bonds 189  
*Sukuk* 189

**6.5 Bond Markets 191**

How Bonds Are Bought and Sold 191  
 Bond Price Reporting 191  
*A Note on Bond Price Quotes* 194

EARs and APRs 145

EARs, APRs, Financial Calculators, and Spreadsheets 147

**5.4 Loan Types and Loan Amortization 148**

Pure Discount Loans 148  
 Interest-Only Loans 148  
 Amortized Loans 149

**Summary and Conclusions 153**

**Chapter Review and Self-Test Problems 154**

**Answers to Chapter Review and Self-Test Problems 155**

**Critical Thinking and Concepts Review 157**

**Questions and Problems 157**

**What's on the Web? 165**

**Excel Master It! Problem 166**

**CHAPTER CASE: S&S Air's Mortgage 167**

**6.6 Inflation and Interest Rates 194**

Real versus Nominal Rates 194  
 The Fisher Effect 195

**6.7 Determinants of Bond Yields 196**

The Term Structure of Interest Rates 196  
 Bond Yields and the Yield Curve: Putting It All Together 199  
 Conclusion 200

**Summary and Conclusions 200**

**Chapter Review and Self-Test Problems 201**

**Answers to Chapter Review and Self-Test Problems 201**

**Critical Thinking and Concepts Review 202**

**Questions and Problems 203**

**What's on the Web? 207**

**Excel Master It! Problem 208**

**CHAPTER CASE: Financing S&S Air's Expansion Plans with a Bond Issue 209**

**7 Equity Markets and Stock Valuation 210****7.1 Common Stock Valuation 211**

Cash Flows 211  
 Some Special Cases 212  
*Zero Growth* 213  
*Constant Growth* 213  
*Nonconstant Growth* 216

Components of the Required Return 218  
 Stock Valuation Using Comparables, or Comps 219

## 7.2 Some Features of Common and Preferred Stock 221

Common Stock Features 221  
     *Shareholder Rights* 221  
     *Proxy Voting* 223  
     *Classes of Stock* 223  
     *Other Rights* 224  
     *Dividends* 224  
 Preferred Stock Features 224  
     *Stated Value* 225  
     *Cumulative and Noncumulative Dividends* 225  
     *Is Preferred Stock Really Debt?* 225

## 7.3 The Stock Markets 225

Dealers and Brokers 226  
 Organization of the NYSE 226  
     *Members* 226

## PART FIVE CAPITAL BUDGETING

## 8 Net Present Value and Other Investment Criteria 242

### 8.1 Net Present Value 243

The Basic Idea 243  
 Estimating Net Present Value 244

### 8.2 The Payback Rule 247

Defining the Rule 247  
 Analyzing the Rule 248  
 Redeeming Qualities of the Rule 249  
 Summary of the Rule 250

### 8.3 The Average Accounting Return 250

### 8.4 The Internal Rate Of Return 253

Problems with the IRR 256  
     *Nonconventional Cash Flows* 256  
     *Mutually Exclusive Investments* 258  
 Redeeming Qualities of the IRR 260  
 The Modified Internal Rate of Return (MIRR) 260  
     *Method 1: The Discounting Approach* 260  
     *Method 2: The Reinvestment Approach* 261  
     *Method 3: The Combination Approach* 261  
     *MIRR or IRR: Which Is Better?* 261

### 8.5 The Profitability Index 262

### 8.6 The Practice Of Capital Budgeting 263

**Summary and Conclusions 265**  
**Chapter Review and Self-Test Problems 266**  
**Answers to Chapter Review and Self-Test Problems 266**  
**Critical Thinking and Concepts Review 267**

*Operations* 227  
*Floor Activity* 228  
 Nasdaq Operations 229  
*ECNs* 229  
 Stock Market Reporting 232

### Summary and Conclusions 233

### Chapter Review and Self-Test Problems 233

### Answers to Chapter Review and Self-Test Problems 234

### Critical Thinking and Concepts Review 234

### Questions and Problems 235

### What's on the Web? 240

### Excel Master It! Problem 240

### CHAPTER CASE: Stock Valuation at Ragan, Inc. 241

### Questions and Problems 270

### What's on the Web? 276

### Excel Master It! Problem 276

### CHAPTER CASE: Bullock Gold Mining 278

## 9 Making Capital Investment Decisions 279

### 9.1 Project Cash Flows: A First Look 280

Relevant Cash Flows 280  
 The Stand-Alone Principle 280

### 9.2 Incremental Cash Flows 281

Sunk Costs 281  
 Opportunity Costs 281  
 Side Effects 282  
 Net Working Capital 282  
 Financing Costs 282  
 Other Issues 283

### 9.3 Pro Forma Financial Statements and Project Cash Flows 283

Getting Started: Pro Forma Financial Statements 283  
 Project Cash Flows 284  
     *Project Operating Cash Flow* 284  
     *Project Net Working Capital and Capital Spending* 285  
 Projected Total Cash Flow and Value 285  
 The Tax Shield Approach 286

### 9.4 More on Project Cash Flow 287

A Closer Look at Net Working Capital 287  
 Depreciation 288

*Modified ACRS (MACRS) Depreciation* 289  
*Bonus Depreciation* 290  
*Book Value versus Market Value* 290  
 An Example: The Majestic Mulch  
 and Compost Company (MMCC) 291  
*Operating Cash Flows* 292  
*Changes in NWC* 292  
*Capital Spending* 293  
*Total Cash Flow and Value* 293  
 Conclusion 295

## 9.5 Evaluating NPV Estimates 295

The Basic Problem 295  
 Forecasting Risk 296  
 Sources of Value 297

## 9.6 Scenario and Other What-If Analyses 297

Getting Started 297  
 Scenario Analysis 298  
 Sensitivity Analysis 300

# PART SIX RISK AND RETURN

## 10 Some Lessons from Capital Market History 315

### 10.1 Returns 316

Dollar Returns 316  
 Percentage Returns 318

### 10.2 The Historical Record 320

A First Look 321  
 A Closer Look 321

### 10.3 Average Returns: The First Lesson 326

Calculating Average Returns 326  
 Average Returns: The Historical Record 326  
 Risk Premiums 326  
 The First Lesson 327

### 10.4 The Variability of Returns: The Second Lesson 328

Frequency Distributions and Variability 328  
 The Historical Variance and Standard Deviation 328  
 The Historical Record 331  
 Normal Distribution 332  
 The Second Lesson 333  
 2008: The Bear Growled and Investors Howled 334  
 Using Capital Market History 336  
 More on the Stock Market Risk Premium 336

### 10.5 More on Average Returns 339

Arithmetic versus Geometric Averages 339  
 Calculating Geometric Average Returns 339  
 Arithmetic Average Return or Geometric Average  
 Return? 341

## 9.7 ADDITIONAL CONSIDERATIONS IN CAPITAL

### BUDGETING 301

Managerial Options and Capital Budgeting 301  
*Contingency Planning* 302  
*Strategic Options* 303  
*Conclusion* 303  
 Capital Rationing 304  
*Soft Rationing* 304  
*Hard Rationing* 304

### Summary and Conclusions 305

### Chapter Review and Self-Test Problems 305

### Answers to Chapter Review and Self-Test Problems 306

### Critical Thinking and Concepts Review 307

### Questions and Problems 308

### Excel Master It! Problem 313

### CHAPTER CASE: Conch Republic Electronics 314

## 10.6 Capital Market Efficiency 342

Price Behavior in an Efficient Market 342  
 The Efficient Markets Hypothesis 343  
 Some Common Misconceptions about the EMH 344  
 The Forms of Market Efficiency 345

### Summary and Conclusions 346

### Answers to Chapter Review and Self-Test Problems 347

### Critical Thinking and Concepts Review 347

### Questions and Problems 348

### What's on the Web? 352

### Excel Master It! Problem 352

### CHAPTER CASE: A Job at S&S Air 353

## 11 Risk and Return 355

### 11.1 Expected Returns and Variances 356

Expected Return 356  
 Calculating the Variance 358

### 11.2 Portfolios 360

Portfolio Weights 360  
 Portfolio Expected Returns 360  
 Portfolio Variance 362

### 11.3 Announcements, Surprises, and Expected Returns 363

Expected and Unexpected Returns 363  
 Announcements and News 364

**11.4 Risk: Systematic and Unsystematic 365**

- Systematic and Unsystematic Risk 366
- Systematic and Unsystematic Components of Return 366

**11.5 Diversification and Portfolio Risk 367**

- The Effect of Diversification: Another Lesson from Market History 367
- The Principle of Diversification 368
- Diversification and Unsystematic Risk 369
- Diversification and Systematic Risk 369

**11.6 Systematic Risk and Beta 370**

- The Systematic Risk Principle 370
- Measuring Systematic Risk 370
- Portfolio Betas 373

**11.7 The Security Market Line 374**

- Beta and the Risk Premium 374
- The Reward-to-Risk Ratio* 375
- The Basic Argument* 376
- The Fundamental Result* 377

**PART SEVEN LONG-TERM FINANCING****12 Cost of Capital 395****12.1 The Cost of Capital: Some Preliminaries 396**

- Required Return versus Cost of Capital 396
- Financial Policy and Cost of Capital 397

**12.2 The Cost of Equity 398**

- The Dividend Growth Model Approach 398
- Implementing the Approach* 398
- Estimating  $g$*  398
- Advantages and Disadvantages of the Approach* 399
- The SML Approach 400
- Implementing the Approach* 400
- Advantages and Disadvantages of the Approach* 401

**12.3 The Costs of Debt and Preferred Stock 401**

- The Cost of Debt 402
- The Cost of Preferred Stock 402

**12.4 The Weighted Average Cost of Capital 403**

- The Capital Structure Weights 403
- Taxes and the Weighted Average Cost of Capital 404
- Solving the Warehouse Problem and Similar Capital Budgeting Problems 406
- Calculating the WACC for Eastman Chemical 407
- Eastman's Cost of Equity* 409
- Eastman's Cost of Debt* 410
- Eastman's WACC* 413

**12.5 Divisional and Project Costs of Capital 413**

- The SML and the WACC 414
- Divisional Cost of Capital 415
- The Pure Play Approach 415
- The Subjective Approach 416

- The Security Market Line 379
- Market Portfolios* 379
- The Capital Asset Pricing Model* 379

**11.8 The SML and the Cost of Capital:****a Preview 381**

- The Basic Idea 381
- The Cost of Capital 382

**Summary and Conclusions 382****Chapter Review and Self-Test Problems 383****Answers to Chapter Review and Self-Test Problems 384****Critical Thinking and Concepts Review 385****Questions and Problems 387****What's on the Web? 391****Excel Master It! Problem 392****CHAPTER CASE: The Beta for FLIR Systems 394****12.6 Company Valuation With The WACC 417****Summary and Conclusions 420****Chapter Review and Self-Test Problems 420****Answers to Chapter Review and Self-Test Problems 420****Critical Thinking and Concepts Review 421****Questions and Problems 422****What's on the Web? 428****Excel Master It! Problem 428****CHAPTER CASE: Cost of Capital for Master Tools 429****13 Leverage and Capital Structure 430****13.1 The Capital Structure Question 431****13.2 The Effect of Financial Leverage 432**

- The Impact of Financial Leverage 432
- Financial Leverage, EPS, and ROE: An Example* 432
- EPS versus EBIT* 433
- Corporate Borrowing and Homemade Leverage 435

## PART ONE Overview of Financial Management

# 1 Introduction to Financial Management

In 2010, Adam Neumann and a business partner opened the first WeWork space in New York's Little Italy. WeWork provided shared office space for businesses, who would rent space as needed, sometimes only for a day. By 2019, WeWork operated in more than 111 cities in 29 countries. Revenues had grown to about \$3 billion, but the company was still losing money. Early in 2019, the giant tech investor SoftBank made a major bet on WeWork, which valued the company at \$47 billion.

Unfortunately, everything was not rosy at WeWork. In the middle of 2019, the company filed to go public in an IPO, but then changed its mind. In late 2019, SoftBank agreed to another major investment, but it pulled the deal in 2020. What happened? Among other things, the COVID-19 pandemic hit, calling into question the company's entire business model of shared, face-to-face meeting spaces. But in a surprise to many, in July 2020, Marcelo Claure, who was brought in to revitalize WeWork, announced the company should be profitable by 2021.

Understanding WeWork's story as it progressed from a startup to a multi-billion-dollar enterprise and its subsequent struggles takes us into issues involving the corporate form of organization, corporate goals, and corporate control, all of which we discuss in this chapter.

Please visit us at [essentialsofcorporatefinance.blogspot.com](https://essentialsofcorporatefinance.blogspot.com) for the latest developments in the world of corporate finance.

To begin our study of financial management, we address two central issues. First: What is corporate, or business, finance, and what is the role of the financial manager? Second: What is the goal of financial management?

### LEARNING OBJECTIVES

After studying this chapter, you should be able to:

- LO 1** Discuss the basic types of financial management decisions and the role of the financial manager.
- LO 2** Identify the goal of financial management.
- LO 3** Compare the financial implications of the different forms of business organizations.
- LO 4** Describe the conflicts of interest that can arise between managers and owners.

## 1.1 FINANCE: A QUICK LOOK

Before we plunge into our study of “corp. fin.,” we think a quick overview of the finance field might be a good idea. Our goal is to clue you in on some of the most important areas in finance and some of the career opportunities available in each. We also want to illustrate some of the ways finance fits in with other areas such as marketing, management, and accounting.

### The Five Basic Areas

Traditionally, financial topics are grouped into five main areas:

1. Corporate finance
2. Investments
3. Financial institutions
4. International finance
5. Fintech

We discuss each of these next.

For job descriptions in finance and other areas, visit [corporatefinanceinstitute.com/resources/careers/jobs/](http://corporatefinanceinstitute.com/resources/careers/jobs/).

**Corporate Finance** The first of these five areas, corporate finance, is the main subject of this book. We begin covering this subject in our next section, so we will wait until then to get into any details. One thing we should note is that the term *corporate finance* seems to imply that what we cover is only relevant to corporations, but the truth is that almost all of the topics we consider are much broader than that. Maybe *business finance* would be a little more descriptive, but even this is too narrow because at least half of the subjects we discuss in the pages ahead are really basic financial ideas and principles applicable across all the various areas of finance and beyond.

**Investments** Broadly speaking, the investments area deals with financial assets such as stocks and bonds. Some of the more important questions include:

1. What determines the price of a financial asset, such as a share of stock?
2. What are the potential risks and rewards associated with investing in financial assets?
3. What is the best mixture of financial assets to hold?

Students who specialize in the investments area have various career opportunities. Being a stockbroker is one of the most common. Stockbrokers often work for large companies such as Merrill Lynch, advising customers on what types of investments to consider and helping them make buy and sell decisions. Financial advisors play a similar role but are not necessarily brokers.

Portfolio management is a second investments-related career path. Portfolio managers, as the name suggests, manage money for investors. For example, individual investors frequently buy into mutual funds. Such funds are a means of pooling money that is then invested by a portfolio manager. Portfolio managers also invest and manage money for pension funds, insurance companies, and many other types of institutions.

Security analysis is a third area. A security analyst researches individual investments, such as stock in a particular company, and makes a determination as to whether the price is right. To do so, an analyst delves deeply into company and industry reports, along with a variety of other information sources. Frequently, brokers and portfolio managers rely on security analysts for information and recommendations.

These investments-related areas, like many areas in finance, share an interesting feature. If jobs in this area are done well, they can be very rewarding financially (translation: You

can make a lot of money). The bad news, of course, is that they can be very demanding and very competitive, so they are definitely not for everybody.

**Financial Institutions** Financial institutions are basically businesses that deal primarily in financial matters. Banks and insurance companies would probably be the most familiar to you. Institutions such as these employ people to perform a wide variety of finance-related tasks. For example, a commercial loan officer at a bank would evaluate whether a particular business has a strong enough financial position to warrant extending a loan. At an insurance company, an analyst would decide whether a particular risk was suitable for insuring and what the premium should be.

**International Finance** International finance isn't so much an area as it is a specialization within one of the main areas we described earlier. In other words, careers in international finance generally involve international aspects of corporate finance, investments, or financial institutions. For example, some portfolio managers and security analysts specialize in non-U.S. companies. Similarly, many U.S. businesses have extensive overseas operations and need employees familiar with such international topics as exchange rates and political risk. Banks frequently are asked to make loans across country lines, so international specialists are needed there as well.

**Fintech** Finance has always been an early adopter of faster, cheaper technologies. The combination of technology and finance is called *fintech*. Fintech is a broad term for a company that uses the internet, mobile phones, software, and/or cloud services to provide a financial service. We discuss fintech in more detail in the next section.

## Why Study Finance?

Who needs to know finance? In a word, you. In fact, there are many reasons you need a working knowledge of finance even if you are not planning a career in finance. We explore some of these reasons next.

**Marketing and Finance** If you are interested in marketing, you need to know finance because, for example, marketers constantly work with budgets, and they need to understand how to get the greatest payoff from marketing expenditures and programs. Analyzing costs and benefits of projects of all types is one of the most important aspects of finance, so the tools you learn in finance are vital in marketing research, the design of marketing and distribution channels, and product pricing, to name a few areas.

Financial analysts rely heavily on marketing analysts, and the two frequently work together to evaluate the profitability of proposed projects and products. As we will see in a later chapter, sales projections are a key input in almost every type of new product analysis, and such projections are often developed jointly between marketing and finance.

Beyond this, the finance industry employs marketers to help sell financial products such as bank accounts, insurance policies, and mutual funds. Financial services marketing is one of the most rapidly growing types of marketing, and successful financial services marketers are very well compensated. To work in this area, you obviously need to understand financial products.

**Accounting and Finance** For accountants, finance is required reading. In smaller businesses in particular, accountants often are required to make financial decisions as well as perform traditional accounting duties. Further, as the financial world continues to grow

more complex, accountants have to know finance to understand the implications of many of the newer types of financial contracts and the impact they have on financial statements. Beyond this, cost accounting and business finance are particularly closely related, sharing many of the same subjects and concerns.

Financial analysts make extensive use of accounting information; they are some of the most important end users. Understanding finance helps accountants recognize what types of information are particularly valuable and, more generally, how accounting information is actually used (and abused) in practice.

**Management and Finance** One of the most important areas in management is strategy. Thinking about business strategy without simultaneously thinking about financial strategy is an excellent recipe for disaster, and, as a result, management strategists must have a very clear understanding of the financial implications of business plans.

In broader terms, management employees of all types are expected to have a strong understanding of how their jobs affect profitability, and they also are expected to be able to work within their areas to improve profitability. This is precisely what studying finance teaches you: What are the characteristics of activities that create value?

**Technology and Finance** STEM (science, technology, engineering, and math) classes have become more important in recent years. Finance is considered a STEM discipline, especially at the graduate level. As we discussed, fintech is the area in finance that focuses on the STEM side of things. We'll consider a few examples next. As we'll see, fintech companies can often provide cheaper, faster, and more convenient services than brick-and-mortar setups.

**Banking Fintech** Fintech companies are beginning to compete with traditional bank roles. Mobile payments are a fast-growing form of fintech. Companies such as Venmo and PayPal permit users to transfer money directly from one person to another. These companies have reduced the need for more traditional payment methods, such as checks. In 2019, more than \$1 trillion was transferred by mobile payment companies.

Crowdfunding companies like Kickstarter and GoFundMe allow users to raise money directly from other people. Variations exist in these crowdfunding companies: Kickstarter participants are often buying a product before it comes to market, while GoFundMe is used to raise money for a cause.

Fintechs such as Kabbage, Lendio, and Accion have been created to establish marketplaces to provide companies with working capital. These companies have a more streamlined process compared to banks and are willing to fund working capital for startups, which are often unable to find funding through more traditional means.

Other fintech companies, such as Upstart and Prosper, have become marketplaces for direct lending to consumers. Customers of these companies apply for loans, which are funded directly by other participants, usually individuals. In a traditional bank loan, much of the decision is determined by a credit score and previous credit history. These marketplaces allow for loans to be funded based off other factors.

A fast-growing fintech area is buy now, pay later (BNPL). One large BNPL company, Affirm, went public in 2021. Affirm works with retailers like Peloton, adidas, and Swatch to fund purchases made by customers. The financing for purchases made at these companies is done through Affirm, which allows the customers to repay the loans in installments. BNPL loans tend to be more personalized than a credit card loan, and often carry a lower interest rate than a credit card.

**Blockchain and Cryptocurrency** Blockchain is at the heart of many new fintech services. Blockchain is a list of records, called blocks, that are used to record transactions. Each block contains a cryptographic hash of the previous block, a time stamp, and transaction data. By design, blockchain is resistant to alteration and thus provides an accurate record of transactions.

Cryptocurrency is a digital asset designed to act like currency but is not controlled by any centralized monetary authority. Bitcoin, the first cryptocurrency, was released in 2009. Since then, more than 4,000 variations have been released.

**Insurance** Insurance technology, or *insurtech*, allows customers to research, compare, and purchase insurance online without physically visiting an insurance agent. Insurtech has streamlined the processes of claims management and evaluating and pricing risks, which has driven down costs. Insurtech companies are expanding into all areas of insurance, from Lemonade, which offers homeowners and renters insurance, and Oscar Health, which specializes in health insurance, to Trōv, which allows you to insure a single item for any time period right from your mobile phone.

**Robo-advising and Stock Trading** Traditionally, if you invested through a broker, the broker would advise you on a good asset allocation. Robo-advisors provide investment advice based on mathematical rules or algorithms. This means there is minimal human interaction between the investor and an advisor.

Stock trading apps, such as Robinhood, allow investors to trade stocks commission free. Other apps, like Acorns, allow investors to invest small amounts, often as low as \$1. These apps allow small investors to participate in the stock market much more easily (and cheaply).

**Budgeting Apps** Perhaps the most common use of fintech is through budgeting apps used by consumers. Budgeting apps allow people to keep track of income, monthly payments, expenditures, and more, right on a mobile phone. These apps allow people more insight into their finances and help with creating financial plans for the future.

**You and Finance** Perhaps the most important reason to know finance is that you will have to make financial decisions that will be very important to you personally. Today, for example, when you go to work for almost any type of company, you will be asked to decide how you want to invest your retirement funds. We'll see in a later chapter that what you choose to do can make an enormous difference in your future financial well-being. On a different note, is it your dream to start your own business? Good luck if you don't understand basic finance before you start; you'll end up learning it the hard way. Want to know how big your student loan payments are going to be before you take out that next loan? Maybe not, but we'll show you how to calculate them anyway.

These are just a few of the ways that finance will affect your personal and business lives. Whether you want to or not, you are going to have to examine and understand financial issues, and you are going to have to make financial decisions. We want you to do so wisely, so keep reading.

## CONCEPT QUESTIONS

- 1.1a What are the major areas in finance?
- 1.1b Besides wanting to pass this class, why do you need to understand finance?

## 1.2 BUSINESS FINANCE AND THE FINANCIAL MANAGER

Now we proceed to define business finance and the financial manager's job.

### What Is Business Finance?

Imagine you were to start your own business. No matter what type of business you started, you would have to answer the following three questions in some form or another:

1. What long-term investments should you take on? That is, what lines of business will you be in, and what sorts of buildings, machinery, and equipment will you need?
2. Where will you get the long-term financing to pay for your investments? Will you bring in other owners, or will you borrow the money?
3. How will you manage your everyday financial activities, such as collecting from customers and paying suppliers?

These are not the only questions, but they are among the most important. Business finance, broadly speaking, is the study of ways to answer these three questions. We'll be looking at each of them in the chapters ahead.

### The Financial Manager

The financial management function is usually associated with a top officer of the firm, often called the chief financial officer (CFO) or vice president of finance. Figure 1.1 is a simplified organizational chart that highlights the finance activities in a large firm. As shown, the vice president of finance coordinates the activities of the treasurer and the controller. The controller's office handles cost and financial accounting, tax payments, and management information systems. The treasurer's office is responsible for managing the firm's cash and credit, its financial planning, and its capital expenditures. These treasury activities are all related to the three general questions raised above, and the chapters ahead deal primarily with these issues. Our study thus bears mostly on activities usually associated with the treasurer's office. In a smaller firm, the treasurer and controller might be the same person, and there would be only one office.

### Financial Management Decisions

As our preceding discussion suggests, the financial manager must be concerned with three basic types of questions. We consider these in greater detail next.

**Capital Budgeting** The first question concerns the firm's long-term investments. The process of planning and managing a firm's long-term investments is called **capital budgeting**. In capital budgeting, the financial manager tries to identify investment opportunities that are worth more to the firm than they cost to acquire. Loosely speaking, this means that the value of the cash flow generated by an asset exceeds the cost of that asset.

Regardless of the specific investment under consideration, financial managers must be concerned with how much cash they expect to receive, when they expect to receive it, and how likely they are to receive it. Evaluating the *size*, *timing*, and *risk* of future cash flows is the essence of capital budgeting. In fact, whenever we evaluate a business decision, the size, timing, and risk of the cash flows will be, by far, the most important things we will consider.

For current issues facing CFOs, see [www.cfo.com](http://www.cfo.com).

#### capital budgeting

The process of planning and managing a firm's long-term investments.

**Capital Structure** The second question for the financial manager concerns how the firm obtains the financing it needs to support its long-term investments. A firm's **capital structure** (or financial structure) refers to the specific mixture of long-term debt and equity the firm uses to finance its operations. The financial manager has two concerns in this area. First: How much should the firm borrow? Second: What are the least expensive sources of funds for the firm?

In addition to deciding on the financing mix, the financial manager has to decide exactly how and where to raise the money. The expenses associated with raising long-term financing can be considerable, so different possibilities must be evaluated carefully. Also, businesses borrow money from a variety of lenders in a number of different ways. Choosing among lenders and among loan types is another job handled by the financial manager.

**Working Capital Management** The third question concerns **working capital** management. The term *working capital* refers to a firm's short-term assets, such as inventory, and its short-term liabilities, such as money owed to suppliers. Managing the firm's working capital is a day-to-day activity that ensures the firm has sufficient resources to continue its operations and avoid costly interruptions. This involves a number of activities related to the firm's receipt and disbursement of cash.

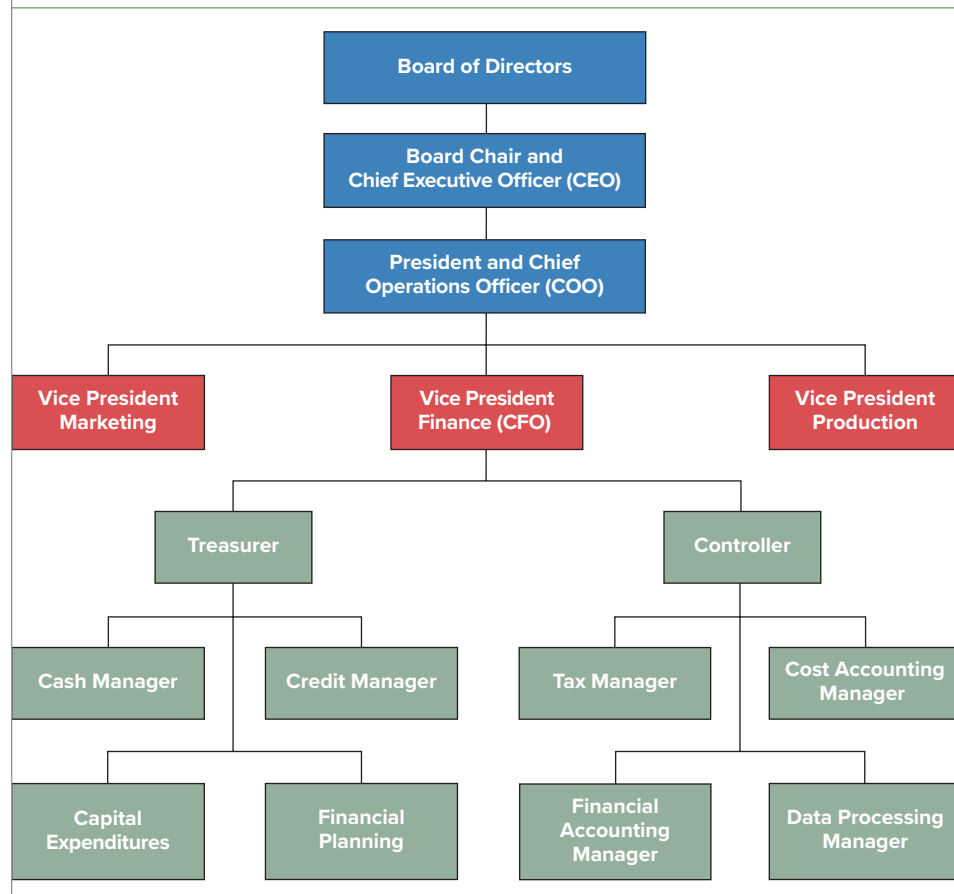

Some questions about working capital that must be answered are the following: (1) How much cash and inventory should we keep on hand? (2) Should we sell on credit to our customers? (3) How will we obtain any needed short-term financing? (4) If we borrow in

#### capital structure

The mixture of debt and equity maintained by a firm.

#### working capital

A firm's short-term assets and liabilities.

**FIGURE 1.1**

#### A simplified organizational chart

The exact titles and organization differ from company to company.

the short term, how and where should we do it? This is just a small sample of the issues that arise in managing a firm's working capital.

**Conclusion** The three areas of corporate financial management we have described—capital budgeting, capital structure, and working capital management—are very broad categories. Each includes a rich variety of topics, and we have indicated only a few of the questions that arise in the different areas. The chapters ahead contain greater detail.

### CONCEPT QUESTIONS

- 1.2a What is the capital budgeting decision?
- 1.2b What do you call the specific mixture of long-term debt and equity that a firm chooses to use?
- 1.2c Into what category of financial management does cash management fall?

## 1.3 FORMS OF BUSINESS ORGANIZATION

Large firms in the United States, such as IBM and Apple, are almost all organized as corporations. We examine the three different legal forms of business organization—sole proprietorship, partnership, and corporation—to see why this is so.

### Sole Proprietorship

A **sole proprietorship** is a business owned by one person. This is the simplest type of business to start and is the least regulated form of organization. For this reason, there are more proprietorships than any other type of business, and many businesses that later become large corporations start out as small proprietorships.

The owner of a sole proprietorship keeps all the profits. That's the good news. The bad news is that the owner has *unlimited liability* for business debts. This means that creditors can look to the proprietor's personal assets for payment. Similarly, there is no distinction between personal and business income, so all business income is taxed as personal income.

The life of a sole proprietorship is limited to the owner's life span, and, importantly, the amount of equity that can be raised is limited to the proprietor's personal wealth. This limitation often means that the business is unable to exploit new opportunities because of insufficient capital. Ownership of a sole proprietorship may be difficult to transfer because this requires the sale of the entire business to a new owner.

### Partnership

A **partnership** is similar to a proprietorship, except that there are two or more owners (partners). In a *general partnership*, all the partners share in gains or losses, and all have unlimited liability for all partnership debts, not just some particular share. The way partnership gains (and losses) are divided is described in the *partnership agreement*. This agreement can be an informal oral agreement, such as "let's start a lawn mowing business," or a lengthy, formal written document.

In a *limited partnership*, one or more *general partners* will run the business and have unlimited liability, but there will be one or more *limited partners* who do not actively participate in the business. A limited partner's liability for business debts is limited to the amount that partner contributes to the partnership. This form of organization is common in real estate ventures, for example.

**sole proprietorship**  
A business owned by a single individual.

For more information on forms of business organization, visit [www.nolo.com](http://www.nolo.com).

**partnership**  
A business formed by two or more individuals or entities.

The advantages and disadvantages of a partnership are basically the same as those for a proprietorship. Partnerships based on a relatively informal agreement are easy and inexpensive to form. General partners have unlimited liability for partnership debts, and the partnership terminates when a general partner wishes to sell out or dies. All income is taxed as personal income to the partners, and the amount of equity that can be raised is limited to the partners' combined wealth. Ownership by a general partner is not easily transferred because a new partnership must be formed. A limited partner's interest can be sold without dissolving the partnership, but finding a buyer may be difficult.

Because a partner in a general partnership can be held responsible for all partnership debts, having a written agreement is very important. Failure to spell out the rights and duties of the partners frequently leads to misunderstandings later on. Also, if you are a limited partner, you must not become deeply involved in business decisions unless you are willing to assume the obligations of a general partner. The reason is that if things go badly, you may be deemed to be a general partner even though you say you are a limited partner.

Based on our discussion, the primary disadvantages of sole proprietorships and partnerships as forms of business organization are (1) unlimited liability for business debts on the part of the owners, (2) limited life of the business, and (3) difficulty of transferring ownership. These three disadvantages add up to a single, central problem: The ability of such businesses to grow can be seriously limited by an inability to raise cash for investment.

## Corporation

The **corporation** is the most important form (in terms of size) of business organization in the United States. A corporation is a legal "person" separate and distinct from its owners, and it has many of the rights, duties, and privileges of an actual person. Corporations can borrow money and own property, can sue and be sued, and can enter into contracts. A corporation can even be a general partner or a limited partner in a partnership, and a corporation can own stock in another corporation.

Not surprisingly, starting a corporation is somewhat more complicated than starting the other forms of business organization. Forming a corporation involves preparing *articles of incorporation* (or a charter) and a set of *bylaws*. The articles of incorporation must contain a number of things, including the corporation's name, its intended life (which can be forever), its business purpose, and the number of shares that can be issued. This information must normally be supplied to the state in which the firm will be incorporated. For most legal purposes, the corporation is a "resident" of that state.

The bylaws are rules describing how the corporation regulates its own existence. For example, the bylaws describe how directors are elected. The bylaws may be amended or extended from time to time by the stockholders.

In a large corporation, the stockholders and the managers are usually separate groups. The stockholders elect the board of directors, who then select the managers. Management is charged with running the corporation's affairs in the stockholders' interests. In principle, stockholders control the corporation because they elect the directors.

As a result of the separation of ownership and management, the corporate form has several advantages. Ownership (represented by shares of stock) can be readily transferred, and the life of the corporation is, therefore, not limited. The corporation borrows money in its own name. As a result, the stockholders in a corporation have limited liability for corporate debts. The most they can lose is what they have invested.

The relative ease of transferring ownership, the limited liability for business debts, and the unlimited life of the business are the reasons the corporate form is superior when it

### corporation

A business created as a distinct legal entity owned by one or more individuals or entities.

comes to raising cash. If a corporation needs new equity, it can sell new shares of stock and attract new investors. The number of owners can be huge; larger corporations have many thousands or even millions of stockholders. For example, the General Electric Company (better known as GE) has about 8.8 billion shares outstanding and 4 million shareholders.

The corporate form has a significant disadvantage. Because a corporation is a legal person, it must pay taxes. Moreover, money paid out to stockholders in the form of dividends is taxed again as income to those stockholders. This is *double taxation*, meaning that corporate profits are taxed twice: at the corporate level when they are earned and again at the personal level when they are paid out.

Today, all 50 states have enacted laws allowing for the creation of a relatively new form of business organization, the limited liability company (LLC). The goal of this entity is to operate and be taxed like a partnership but retain limited liability for owners. Thus, an LLC is essentially a hybrid of a partnership and a corporation. Although states have differing definitions for LLCs, the more important scorekeeper is the Internal Revenue Service (IRS). The IRS will consider an LLC a corporation, thereby subjecting it to double taxation, unless it meets certain specific criteria. In essence, an LLC cannot be too corporation-like, or it will be treated as one by the IRS. LLCs have become common. For example, Goldman Sachs, one of Wall Street's last remaining partnerships, decided to convert from a private partnership to an LLC (it later "went public," becoming a publicly held corporation). Large accounting firms and law firms by the score have converted to LLCs.

### A Corporation by Another Name . . .

The corporate form has many variations around the world. Exact laws and regulations differ, of course, but the essential features of public ownership and limited liability remain. These firms are often called *joint-stock companies*, *public limited companies*, or *limited liability companies*.

Table 1.1 gives the names of a few well-known international corporations, their country of origin, and a translation of the abbreviation that follows the company name.

**Benefit Corporation** As of early 2021, 37 states have enacted laws for a new type of company called a benefit corporation. A benefit corporation is for-profit, but it has three additional legal attributes: accountability, transparency, and purpose. *Accountability* refers to the fact that a benefit corporation must consider how an action will affect shareholders, employees, customers, the community, and the environment. *Transparency* means that, in addition to standard corporate reports, a benefit corporation must provide an annual report

You can find the translation for any business type at [www.corporateinformation.com](http://www.corporateinformation.com).

For more about benefit corporations, check out [benefitcorp.net](http://benefitcorp.net).

**TABLE 1.1**

**International corporations**

Company	Country of Origin	Type of Company	Translation
Bayerische Motoren Werke (BMW) AG	Germany	Aktiengesellschaft	Corporation
Montblanc GmbH	Germany	Gesellschaft mit beschränkter Haftung	Limited liability company
Rolls-Royce PLC	United Kingdom	Public limited company	Public limited company
Shell UK Ltd.	United Kingdom	Limited	Corporation
Unilever NV	Netherlands	Naamloze Vennootschap	Limited liability company
Fiat SpA	Italy	Società per Azioni	Public limited company
Saab AB	Sweden	Aktiebolag	Joint stock company
Peugeot SA	France	Société Anonyme	Joint stock company

detailing how the company pursued a public benefit during the year, or any factors that inhibited the pursuit of this goal. Finally, *purpose* refers to the idea that a benefit corporation must provide a public benefit, either to society as a whole or to the environment.

### CONCEPT QUESTIONS

- 1.3a What are the three forms of business organization?
- 1.3b What are the primary advantages and disadvantages of sole proprietorships and partnerships?
- 1.3c What is the difference between a general and a limited partnership?
- 1.3d Why is the corporate form superior when it comes to raising cash?

## 1.4 THE GOAL OF FINANCIAL MANAGEMENT

To study financial decision making, we first need to understand the goal of financial management. Such an understanding is important because it leads to an objective basis for making and evaluating financial decisions.

### Profit Maximization

Profit maximization would probably be the most commonly cited business goal, but this is not a very precise objective. Do we mean profits this year? If so, then actions such as deferring maintenance, letting inventories run down, and other short-run, cost-cutting measures will tend to increase profits now, but these activities aren't necessarily desirable.

The goal of maximizing profits may refer to some sort of "long-run" or "average" profits, but it's unclear exactly what this means. First, do we mean something like accounting net income or earnings per share? As we will see, these numbers may have little to do with what is good or bad for the firm. Second, what do we mean by the long run? As a famous economist once remarked: "In the long run, we're all dead!" More to the point, this goal doesn't tell us the appropriate trade-off between current and future profits.

### The Goal of Financial Management in a Corporation

The financial manager in a corporation makes decisions for the stockholders of the firm. Given this, instead of listing possible goals for the financial manager, we really need to answer a more fundamental question: From the stockholders' point of view, what is a good financial management decision?

If we assume stockholders buy stock because they seek to gain financially, then the answer is obvious: Good decisions increase the value of the stock, and poor decisions decrease it.

Given our observations, it follows that the financial manager acts in the shareholders' best interests by making decisions that increase the value of the stock. The appropriate goal for the financial manager in a corporation can thus be stated quite easily:

**The goal of financial management is to maximize the current value per share of the existing stock.**

## FINANCE MATTERS

### Corporate Ethics

Large companies are sometimes guilty of unethical behavior. Often, this unethical behavior takes the form of false or misleading financial statements. In one of the largest corporate fraud cases in history, energy giant Enron Corporation was forced to file for bankruptcy in December 2001 amid allegations that the company's financial statements were deliberately misleading and false. Enron's bankruptcy destroyed not only that company, but its auditor Arthur Andersen as well.

Often, unethical behavior is also illegal and can result in a jail sentence for an individual or fines for a corporation. For example, in October 2020, investment bank Goldman Sachs reached a settlement of \$2.8 billion with the U.S. Department of Justice (DOJ). Goldman Sachs admitted wrongdoing in the Malaysian 1MDB scandal in which a number of individuals were responsible for embezzling from the fund, including two Goldman bankers. In response, Goldman sought clawbacks, a repayment of salary and bonuses, from several individuals. The list included \$76 million from three former employees, \$67 million from five former executives, including former CEO Lloyd Blankfein, and another \$31 million from current executives, including CEO David Solomon.

The difference between ethical and unethical behavior can sometimes be murky. For example, many U.S. companies have relocated to Bermuda for reasons beyond the beautiful pink beaches; namely, Bermuda has no corporate

income taxes. With a population of less than 65,000, the island is home to more than 13,000 international companies. Stanley Black & Decker, the well-known maker of Stanley tools, was among the U.S. corporations that considered a move to the island paradise. By doing so, Stanley estimated that it would save \$30 million per year in taxes. Stanley ultimately decided against the move, but two of its rivals, Cooper and Ingersoll-Rand, did move to Bermuda. Because the goal of the corporation is to maximize shareholder wealth, this would seem like a good move, and the practice is entirely legal. But is it ethical? What are the issues?

Another corporate activity that has generated much controversy is the practice of outsourcing, or offshoring, jobs to other countries. U.S. corporations engage in this practice when labor costs in another country are substantially lower than they are domestically. Again, this is done to maximize shareholder wealth. But the ethical dilemma in this case is even trickier. Some U.S. workers do lose jobs when offshoring occurs. On the other hand, the Milken Institute estimated that every \$1 spent on offshoring a service job to India generated a net value to the United States of \$1.13, along with another \$.33 to India. And it gets even more complicated: What about foreign companies such as BMW and Toyota that "insource" jobs by building plants in the United States? Is it unethical to outsource U.S. jobs while, at the same time, insourcing jobs from other countries?

The goal of maximizing the value of the stock avoids the problems associated with the different goals we discussed earlier. There is no ambiguity in the criterion, and there is no short-run versus long-run issue. We explicitly mean that our goal is to maximize the *current* stock value. Of course, maximizing stock value is the same thing as maximizing the market price per share.

### A More General Financial Management Goal

Given our goal as stated earlier (maximize the value of the stock), an obvious question comes up: What is the appropriate goal when the firm has no traded stock? Corporations are certainly not the only type of business, and the stock in many corporations rarely changes hands, so it's difficult to say what the value per share is at any given time.

As long as we are dealing with for-profit businesses, only a slight modification is needed. The total value of the stock in a corporation is equal to the value of the owners' equity. Therefore, a more general way of stating our goal is:

**Maximize the market value of the existing owners' equity.**

With this goal in mind, it doesn't matter whether the business is a proprietorship, a partnership, or a corporation. For each of these, good financial decisions increase the market value of the owners' equity and poor financial decisions decrease it.

Business ethics are considered at [www.business-ethics.com](http://www.business-ethics.com).

Finally, our goal does not imply that the financial manager should take illegal or unethical actions in the hope of increasing the value of the equity in the firm. What we mean is that the financial manager best serves the owners of the business by identifying goods and services that add value to the firm because they are desired and valued in the free marketplace. Our nearby *Finance Matters* box discusses some recent ethical issues and problems faced by well-known corporations.

### Sarbanes-Oxley Act

In response to corporate scandals involving companies such as Enron, WorldCom, Tyco, and Adelphia, Congress enacted the Sarbanes-Oxley Act in 2002. The act, which is better known as “SOX,” is intended to strengthen protection against corporate accounting fraud and financial malpractice. Key elements of SOX took effect on November 15, 2004.

SOX contains a number of requirements designed to ensure that companies tell the truth in their financial statements. For example, the officers of a public corporation must review and sign the annual report. They must attest that the annual report does not contain false statements or material omissions and also that the financial statements fairly represent the company’s financial results. In essence, SOX makes management personally responsible for the accuracy of a company’s financial statements.

Because of its extensive requirements, compliance with SOX can be very costly, which has led to some unintended results. Since its implementation, hundreds of public firms have chosen to “go dark,” meaning that their shares are no longer traded in the major stock markets, in which case SOX does not apply. Most of these companies stated that their reason was to avoid the cost of compliance. Ironically, in such cases, the law had the effect of eliminating public disclosure instead of improving it.

SOX also probably has affected the number of companies going public in the United States. Recently, many U.S.-based companies have chosen to go public on the London Stock Exchange’s Alternative Investment Market (AIM) instead. The cost savings can be enormous, especially for small companies. For example, Protonex Technologies, a fuel cell developer based in Southborough, Massachusetts, estimated that it costs about \$1 million per year in compliance costs and mailings to stockholders to be listed on the AIM. In contrast, the annual cost to be listed on the Nasdaq would be about \$3 million, with a large part of the increase due to SOX compliance costs.

To find out more about Sarbanes-Oxley, go to [www.soxlaw.com](http://www.soxlaw.com).

### CONCEPT QUESTIONS

- 1.4a What is the goal of financial management?
- 1.4b What are some shortcomings of the goal of profit maximization?

## 1.5 THE AGENCY PROBLEM AND CONTROL OF THE CORPORATION

We’ve seen that the financial manager in a corporation acts in the best interests of the stockholders by taking actions that increase the value of the firm’s stock. However, we’ve also seen that in large corporations, ownership can be spread over a huge number of stockholders. This dispersion of ownership arguably means that management effectively controls the firm. In this case, will management necessarily act in the best interests of the stockholders?

**agency problem**

The possibility of conflict of interest between the owners and management of a firm.

Put another way, might not management pursue its own goals at the stockholders' expense? We briefly consider some of the arguments in this section.

## Agency Relationships

The relationship between stockholders and management is called an *agency relationship*. Such a relationship exists whenever someone (the principal) hires another (the agent) to represent his or her interest. For example, you might hire someone (an agent) to sell a car that you own while you are away at school. In all such relationships, there is a possibility of conflict of interest between the principal and the agent. Such a conflict is called an **agency problem**.

Suppose you hire someone to sell your car and you agree to pay her a flat fee when she sells the car. The agent's incentive in this case is to make the sale, not necessarily to get you the best price. If you paid a commission of, say, 10 percent of the sales price instead of a flat fee, then this problem might not exist. This example illustrates that the way an agent is compensated is one factor that affects agency problems.

## Management Goals

To see how management and stockholder interests might differ, imagine that a corporation is considering a new investment. The new investment is expected to favorably affect the stock price, but it is also a relatively risky venture. The owners of the firm will wish to take the investment (because the share value will rise), but management may not because there is the possibility that things will turn out badly and management jobs will be lost. If management does not take the investment, then the stockholders may lose a valuable opportunity. This is one example of an *agency cost*.

It is sometimes argued that, left to themselves, managers would tend to maximize the amount of resources over which they have control, or, more generally, business power or wealth. This goal could lead to an overemphasis on business size or growth. For example, cases where management is accused of overpaying to buy another company just to increase the size of the business or to demonstrate corporate power are not uncommon. Obviously, if overpayment does take place, such a purchase does not benefit the owners of the purchasing company.

Our discussion indicates that management may tend to overemphasize organizational survival to protect job security. Also, management may dislike outside interference, so independence and corporate self-sufficiency may be important goals.

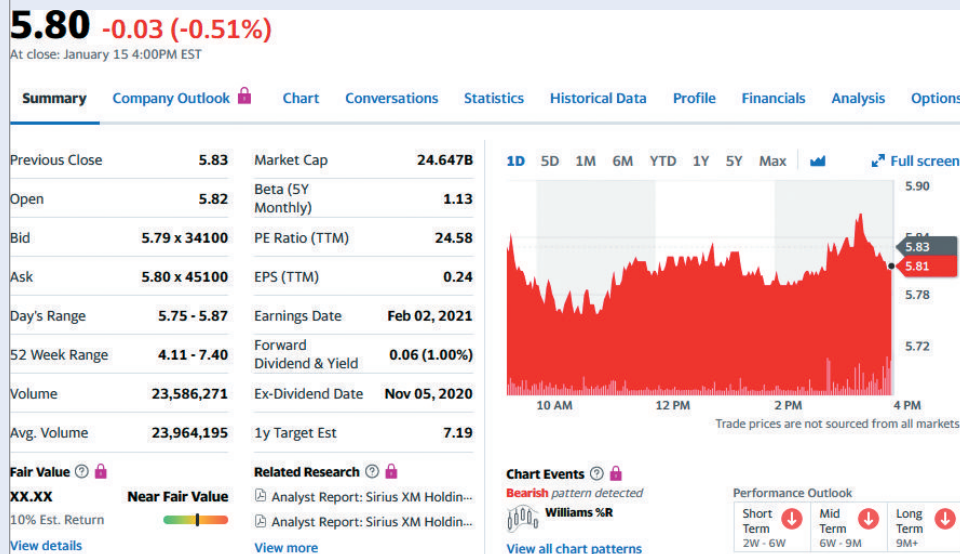

## Do Managers Act in the Stockholders' Interests?

Whether managers will, in fact, act in the best interests of stockholders depends on two factors. First, how closely are management goals aligned with stockholder goals? This question relates to the way managers are compensated. Second, can management be replaced if they do not pursue stockholder goals? This issue relates to control of the firm. As we will discuss, there are a number of reasons to think that, even in the largest firms, management has a significant incentive to act in the interests of stockholders.

**Managerial Compensation** Management will frequently have a significant economic incentive to increase share value for two reasons. First, managerial compensation, particularly at the top, is usually tied to financial performance in general and oftentimes to share value in particular. For example, managers are frequently given the option to buy stock at a fixed price. The more the stock is worth, the more valuable is this option. The second incentive managers have relates to job prospects. Better performers within the firm

## WORK THE WEB

The web is a great place to learn about individual companies, and there are a slew of sites available to help you. Try visiting [finance.yahoo.com](https://finance.yahoo.com). Once there, you should see a box with “Quote Lookup.” To look up a company, you need its “ticker symbol” (or ticker for short), which is a unique one-to-five-letter identifier. Or you can type in a company’s name to find the ticker. For example, we typed in “SIRI,” which is the ticker symbol for Sirius XM Holdings, the satellite radio provider. Here is a portion of what we found:

There is a lot of information here and a lot of other links for you to explore, so have at it. By the end of the term, we hope it all makes sense to you!

### QUESTIONS

1. Go to [finance.yahoo.com](https://finance.yahoo.com) and find the current stock prices for Southwest Airlines (LUV), Harley-Davidson (HOG), and International Business Machines (IBM).
2. Get a quote for American Express (AXP) and follow the “Statistics” link. What information is available on this link? What do “mrq,” “ttm,” “yoy,” and “lfy” mean?

will tend to get promoted. More generally, those managers who are successful in pursuing stockholder goals will be in greater demand in the labor market and thus command higher salaries.

In fact, managers who are successful in pursuing stockholder goals can reap enormous rewards. For example, according to *The Wall Street Journal*, Paycom founder and CEO Chad Richison’s compensation for 2020 was \$211 million, which is less than Kylie Jenner (\$590 million), but more than Kanye West (\$170 million). Information on executive compensation, along with a ton of other information, can be easily found on the web for almost any public company. Our nearby *Work the Web* box shows you how to get started.

**stakeholder**

Someone other than a stockholder or creditor who potentially has a claim on the cash flows of the firm.

**Control of the Firm** Control of the firm ultimately rests with stockholders. They elect the board of directors, who, in turn, hires and fires management. The mechanism by which unhappy stockholders can act to replace existing management is called a *proxy fight*. A proxy is the authority to vote someone else's stock. A proxy fight develops when a group solicits proxies in order to replace the existing board, and thereby replace existing management.

For example, in January 2019, activist hedge fund Elliott Management announced plans for a proxy fight with eBay. Elliott was joined by fellow activist investor Starboard Value. Elliott and Starboard wanted eBay to sell Stubhub and the company's Classifieds business. The funds eventually pushed for four seats on eBay's board. In response, eBay sold Stubhub for about \$4 billion in November 2019. The proxy fight for four seats on the board ended in April 2020 when eBay hired Jamie Iannone as the new CEO of e-commerce. Even though the proxy fight had ended, eBay sold its Classifieds business in July 2020 for \$9.2 billion.

Another way that management can be replaced is by takeover. Firms that are poorly managed are more attractive as acquisitions than well-managed firms because a greater profit potential exists. Thus, avoiding a takeover by another firm gives management another incentive to act in the stockholders' interests. Unhappy prominent shareholders can suggest different business strategies to a firm's top management. For example, in July 2020, Eldorado completed its \$17.3 billion acquisition of Caesars Entertainment, creating the largest gambling company in the United States. And, even though the new company kept the Caesars name and ticker symbol, the management of Caesars was let go, and Eldorado management took over the merged company.

**Conclusion** The available theory and evidence are consistent with the view that stockholders control the firm and that stockholder wealth maximization is the relevant goal of the corporation. Even so, there will undoubtedly be times when management goals are pursued at the expense of the stockholders, at least temporarily.

Agency problems are not unique to corporations; they exist whenever there is a separation of ownership and management. This separation is most pronounced in corporations, but it certainly exists in partnerships and proprietorships as well.

## Stakeholders

Our discussion thus far implies that management and stockholders are the only parties with an interest in the firm's decisions. This is an oversimplification, of course. Employees, customers, suppliers, and even the government all have a financial interest in the firm.

These various groups are called **stakeholders** in the firm. In general, a stakeholder is someone other than a stockholder or creditor who potentially has a claim on the cash flows of the firm. Such groups also will attempt to exert control over the firm, perhaps to the detriment of the owners.

## CONCEPT QUESTIONS

- 1.5a** What is an agency relationship?
- 1.5b** What are agency problems, and how do they arise? What are agency costs?
- 1.5c** What incentives do managers in large corporations have to maximize share value?

## 1.6 FINANCIAL MARKETS AND THE CORPORATION

We've seen that the primary advantages of the corporate form of organization are that ownership can be transferred more quickly and easily than with other forms and that money can be raised more readily. Both of these advantages are significantly enhanced by the existence of financial markets, and financial markets play an extremely important role in corporate finance.

### Cash Flows to and from the Firm

The interplay between the corporation and the financial markets is illustrated in Figure 1.2. The arrows in Figure 1.2 trace the passage of cash from the financial markets to the firm and from the firm back to the financial markets.

Suppose we start with the firm selling shares of stock and borrowing money to raise cash. Cash flows to the firm from the financial markets (A). The firm invests the cash in current and fixed (or long-term) assets (B). These assets generate some cash (C), some of which goes to pay corporate taxes (D). After taxes are paid, some of this cash flow is reinvested in the firm (E). The rest goes back to the financial markets as cash paid to creditors and shareholders (F).

A financial market, like any market, is a way of bringing buyers and sellers together. In financial markets, it is debt and equity securities that are bought and sold. Financial markets differ in detail, however. The most important differences concern the types of securities that

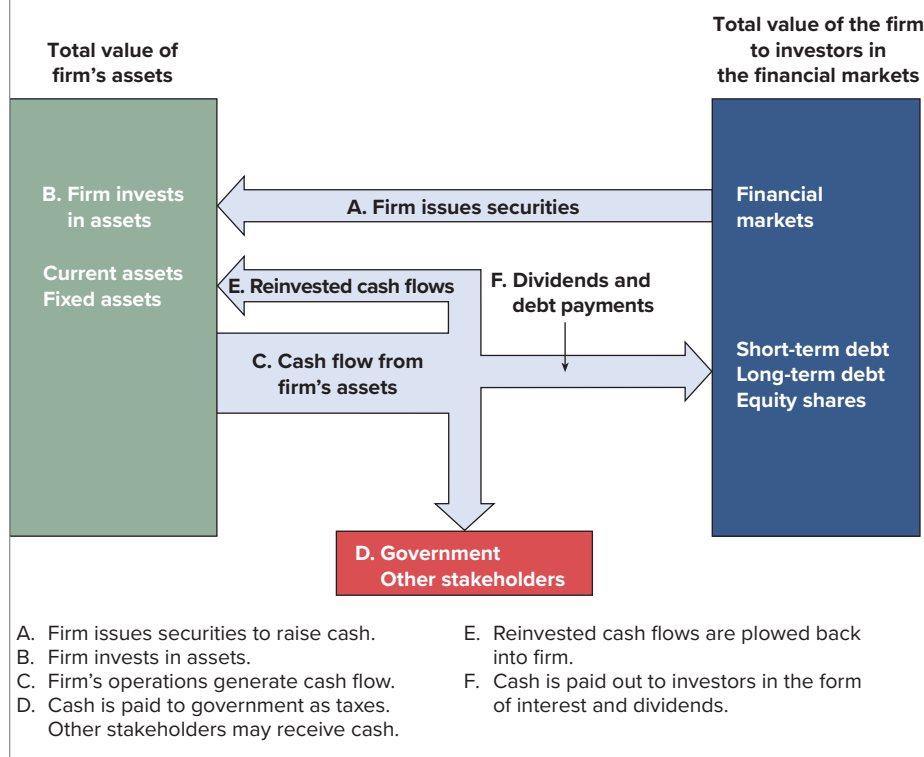

FIGURE 1.2

Cash flows between the firm and the financial markets

To learn more about the SEC, visit [www.sec.gov](http://www.sec.gov).

To learn more about stock exchanges, visit [www.nyse.com](http://www.nyse.com) and [www.nasdaq.com](http://www.nasdaq.com).

are traded, how trading is conducted, and who the buyers and sellers are. Some of these differences are discussed next.

## Primary versus Secondary Markets

Financial markets function as both primary and secondary markets for debt and equity securities. The term *primary market* refers to the original sale of securities by governments and corporations. The *secondary markets* are those in which these securities are bought and sold after the original sale. Equities are, of course, issued solely by corporations. Debt securities are issued by both governments and corporations. In the discussion that follows, we focus on corporate securities only.

**Primary Markets** In a primary market transaction, the corporation is the seller, and the transaction raises money for the corporation. Corporations engage in two types of primary market transactions: public offerings and private placements. A public offering, as the name suggests, involves selling securities to the general public, whereas a private placement is a negotiated sale involving a specific buyer.

By law, public offerings of debt and equity must be registered with the Securities and Exchange Commission (SEC). Registration requires the firm to disclose a great deal of information before selling any securities. The accounting, legal, and selling costs of public offerings can be considerable.

Partly to avoid the various regulatory requirements and the expense of public offerings, debt and equity often are sold privately to large financial institutions such as life insurance companies or mutual funds. Such private placements do not have to be registered with the SEC and do not require the involvement of underwriters (investment banks that specialize in selling securities to the public).

**Secondary Markets** A secondary market transaction involves one owner or creditor selling to another. It is, therefore, the secondary markets that provide the means for transferring ownership of corporate securities. Although a corporation is only directly involved in a primary market transaction (when it sells securities to raise cash), the secondary markets are still critical to large corporations. The reason is that investors are much more willing to purchase securities in a primary market transaction when they know that those securities can be resold later if desired.

**Dealer versus Auction Markets** There are two kinds of secondary markets: *auction* markets and *dealer* markets. Generally speaking, dealers buy and sell for themselves, at their own risk. A car dealer, for example, buys and sells automobiles. In contrast, brokers and agents match buyers and sellers, but they do not actually own the commodity that is bought or sold. A real estate agent, for example, does not normally buy and sell houses.

Dealer markets in stocks and long-term debt are called *over-the-counter* (OTC) markets. Most trading in debt securities takes place over the counter. The expression *over the counter* refers to days of old when securities were literally bought and sold at counters in offices around the country. Today, a significant fraction of the market for stocks and almost all of the market for long-term debt have no central location; the many dealers are connected electronically.

Auction markets differ from dealer markets in two ways. First, an auction market, or exchange, has a physical location (like Wall Street). Second, in a dealer market, most of the buying and selling is done by the dealer. The primary purpose of an auction market, on the other hand, is to match those who wish to sell with those who wish to buy. Dealers play a limited role.

**Trading in Corporate Securities** The equity shares of most of the large firms in the United States trade in organized auction markets. The largest such market is the New York Stock Exchange (NYSE), which accounts for more than 85 percent of all the shares traded in auction markets.

In addition to the stock exchanges, there is a large OTC market for stocks. In 1971, the National Association of Securities Dealers (NASD) made available to dealers and brokers an electronic quotation system called Nasdaq (NASD Automated Quotations system, pronounced “naz-dak”). There are more companies listed on Nasdaq than there are on the NYSE, but they tend to be much smaller in size and trade less actively. There are exceptions, of course. Both Microsoft and Apple trade OTC, for example. Nonetheless, the total value of Nasdaq stocks is significantly less than the total value of NYSE stocks.

There are many large and important financial markets outside the United States, of course, and U.S. corporations are increasingly looking to these markets to raise cash. The Tokyo Stock Exchange and the London Stock Exchange (TSE and LSE, respectively) are two well-known examples. The fact that OTC markets have no physical location means that national borders do not present a great barrier, and there is now a huge international OTC debt market. Because of globalization, financial markets have reached the point where trading in many instruments never stops; it just travels around the world.

**Listing** Stocks that trade on an organized exchange (or market) are said to be *listed* on that exchange. In order to be listed, firms must meet certain minimum criteria concerning, for example, asset size and number of shareholders. These criteria differ for different exchanges.

The NYSE has the most stringent requirements of the stock markets in the United States. There are minimums on earnings, assets, and number and market value of shares outstanding.

Visit the Tokyo Stock Exchange in English: [www.jpx.co.jp/english/](http://www.jpx.co.jp/english/).

Visit the London Stock Exchange: [www.londonstockexchange.com](http://www.londonstockexchange.com).

## CONCEPT QUESTIONS

- 1.6a What is a dealer market? How do dealer and auction markets differ?
- 1.6b What is the largest auction market in the United States?
- 1.6c What does OTC stand for? What is the large OTC market for stocks called?

## SUMMARY AND CONCLUSIONS

This chapter has introduced you to some of the basic ideas in business finance. In it, we saw that:

1. Business finance has three main areas of concern:
  - a. *Capital budgeting*. What long-term investments should the firm take?
  - b. *Capital structure*. Where will the firm get the long-term financing to pay for its investments? In other words, what mixture of debt and equity should we use to fund our operations?
  - c. *Working capital management*. How should the firm manage its everyday financial activities?
2. The goal of financial management in a for-profit business is to make decisions that increase the value of the stock, or, more generally, increase the market value of the equity.

3. The corporate form of organization is superior to other forms when it comes to raising money and transferring ownership interests, but it has the significant disadvantage of double taxation.
4. There is the possibility of conflicts between stockholders and management in a large corporation. We called these conflicts agency problems and discussed how they might be controlled and reduced.

Of the topics we've discussed thus far, the most important is the goal of financial management. Throughout the text, we will be analyzing many different financial decisions, but we always ask the same question: How does the decision under consideration affect the value of the equity in the firm?

## CRITICAL THINKING AND CONCEPTS REVIEW

- |             |  |
|-------------|--|
| <b>LO 1</b> | <b>1.1 The Financial Management Decision Process</b> What are the three types of financial management decisions? For each type of decision, give an example of a business transaction that would be relevant.  |
| <b>LO 3</b> | <b>1.2 Sole Proprietorships and Partnerships</b> What are the four primary disadvantages to the sole proprietorship and partnership forms of business organization? What benefits are there to these types of business organization as opposed to the corporate form?          |
| <b>LO 3</b> | <b>1.3 Corporations</b> What is the primary disadvantage of the corporate form of organization? Name at least two of the advantages of corporate organization.   |
| <b>LO 3</b> | <b>1.4 Corporate Finance Organization</b> In a large corporation, what are the two distinct groups that report to the chief financial officer? Which group is the focus of corporate finance?  |
| <b>LO 2</b> | <b>1.5 Goal of Financial Management</b> What goal should always motivate the actions of the firm's financial manager?  |
| <b>LO 4</b> | <b>1.6 Agency Problems</b> Who owns a corporation? Describe the process whereby the owners control the firm's management. What is the main reason that an agency relationship exists in the corporate form of organization? In this context, what kinds of problems can arise? |

- LO 3 1.7 Primary versus Secondary Markets** You've probably noticed coverage in the financial press of an initial public offering (IPO) of a company's securities. The social networking company Snapchat is a relatively recent example. Is an IPO a primary market transaction or a secondary market transaction?
- LO 3 1.8 Auction versus Dealer Markets** What does it mean when we say the New York Stock Exchange is an auction market? How are auction markets different from dealer markets? What kind of market is Nasdaq?
- LO 2 1.9 Not-for-Profit Firm Goals** Suppose you were the financial manager of a not-for-profit business (a not-for-profit hospital, perhaps). What kinds of goals do you think would be appropriate?
- LO 2 1.10 Ethics and Firm Goals** Can our goal of maximizing the value of the stock conflict with other goals, such as avoiding unethical or illegal behavior? In particular, do you think subjects such as customer and employee safety, the environment, and the general good of society fit in this framework, or are they essentially ignored? Try to think of some specific scenarios to illustrate your answer.
- LO 2 1.11 International Firm Goal** Would our goal of maximizing the value of the stock be different if we were thinking about financial management in a foreign country? Why or why not?
- LO 4 1.12 Agency Problems** Suppose you own stock in a company. The current price per share is \$25. Another company has just announced that it wants to buy your company and will pay \$35 per share to acquire all the outstanding stock. Your company's management immediately begins fighting off this hostile bid. Is management acting in the shareholders' best interests? Why or why not?
- LO 4 1.13 Agency Problems and Corporate Ownership** Corporate ownership varies around the world. Historically, individuals have owned the majority of shares in public corporations in the United States. In Germany and Japan, however, banks, other large financial institutions, and other companies own most of the stock in public corporations. Do you think agency problems are likely to be more or less severe in Germany and Japan than in the United States? Why? In recent years, large financial institutions such as mutual funds and pension funds have become the dominant owners of stock in the United States, and these institutions are becoming more active in corporate affairs. What are the implications of this trend for agency problems and corporate control?
- LO 4 1.14 Executive Compensation** Critics have charged that compensation to top management in the United States is too high and should be cut back. For example, focusing on large corporations, in 2020, General Electric CEO Larry Culp made about \$73 million and Nike CEO John Donahoe made about \$54 million. Are such amounts excessive? In answering, it might be helpful to recognize that superstar athletes such as Cristiano Ronaldo, top entertainers such as Dwayne Johnson, and many others at the top of their respective fields earn at least as much, if not more.
- LO 4 1.15 Sarbanes-Oxley** In response to the Sarbanes-Oxley Act, many small firms in the United States have opted to "go dark" and delist their stock. Why might a company choose this route? What are the costs of "going dark"?

## WHAT'S ON THE WEB?

**1.1 Listing Requirements** This chapter discussed some of the listing requirements for the NYSE and Nasdaq. Find the complete listing requirements for the NYSE at [www.nyse.com](http://www.nyse.com) and Nasdaq at [www.nasdaq.com](http://www.nasdaq.com). Which has more stringent listing requirements? Why don't they have the same listing requirements?

**1.2 Business Formation** As you may (or may not) know, many companies incorporate in Delaware for a variety of reasons. Visit BizFilings at [www.bizfilings.com](http://www.bizfilings.com) to find out why. Which state has the highest fee for incorporation? For an LLC? While at the site, look at the FAQ section regarding corporations and LLCs.

## CHAPTER CASE

### The McGee Cake Company

In early 2016, Doc and Lyn McGee formed the McGee Cake Company. The company produced a full line of cakes, and its specialties included chess cake,\* lemon pound cake, and double-iced, double-chocolate cake. The couple formed the company as an outside interest, and both continued to work at their current jobs. Doc did all the baking, and Lyn handled the marketing and distribution. With good product quality and a sound marketing plan, the company grew rapidly. In early 2021, the company was featured in a widely distributed entrepreneurial magazine. Later that year, the company was featured in *Gourmet Desserts*, a leading specialty food magazine. After the article appeared in *Gourmet Desserts*, sales exploded, and the company began receiving orders from all over the world.

\*Chess cake is quite delicious and distinct from cheesecake. The origin of the name is obscure.

Because of the increased sales, Doc left his other job, followed shortly by Lyn. The company hired additional workers to meet demand. Unfortunately, the fast growth experienced by the company led to cash flow and capacity problems. The company is currently producing as many cakes as possible with the assets it owns, but demand for its cakes is still growing. Further, the company has been approached by a national supermarket chain with a proposal to put four of its cakes in all of the chain's stores, and a national restaurant chain has contacted the company about selling McGee cakes in its restaurants. The restaurant would sell the cakes without a brand name.

Doc and Lyn have operated the company as a sole proprietorship. They have approached you to help manage and direct the company's growth. Specifically, they have asked you to answer the following questions:

#### QUESTIONS

1. What are the advantages and disadvantages of changing the company organization from a sole proprietorship to an LLC?
2. What are the advantages and disadvantages of changing the company organization from a sole proprietorship to a corporation?
3. Ultimately, what action would you recommend the company undertake? Why?
